1 A comparison of experimental estimation methods of the ploughing force in orthogonal cutting.....	6
1.1 Introduction and motivation.....	6
1.2 Experimental procedures.....	7
1.2.1 Cutting test and materials.....	7
1.3 Determination of the ploughing force.....	8
1.4 Experimental results and analysis.....	10
1.5 Conclusion.....	13
2 Effect of uncut chip thickness on the ploughing force in orthogonal cutting.....	14
2.1 Introduction and motivation.....	14
2.2 A new method for determining the ploughing forces.....	15
2.2.1 A comparison method of the total forces for different contact areas	15
2.2.2 Cutting test and materials.....	16
2.2.3 Determination of the real contact between the rear surface of the tool and the processed material.....	18
2.2.4 Determination of the ploughing force.....	20
2.2.5 Experimental results and analysis.....	22
2.3 Effect of the uncut chip thickness on the ploughing force.....	23
2.3.1 Experimental procedures.....	23
2.4 Experimental results and analysis.....	26
2.5 Conclusion.....	28
3 A new method for determining the ploughing forces for cutting brittle materials.....	30
3.1 Introduction and motivation.....	31
3.2 A new method for determining the ploughing forces in the processing of brittle materials.....	34
3.2.1 A comparison method of the total forces for different flank angles.....	34

3.2.2 Cutting test and materials.....	36
3.3 Determination of the ploughing force by a comparison method of the total forces for different flank angles.....	37
3.4 Experimental results and analysis in the cutting of brittle materials.....	39
3.5 The principle of determining the reliability of the new method.....	41
3.5.1 Experimental procedures when cutting plastic materials.....	42
3.5.2 Determination of the ploughing force by the comparison method of the total forces for different flank angles.....	42
3.5.3 Determination of the ploughing force by the comparison method of the total forces for different contact areas.....	45
3.6 Experimental results and analysis of cutting plastic. materials using the two methods.....	48
3.7 Conclusion.....	50
4 Study of reasons of increased active force using coolant with uncut chip thickness.....	51
4.1 Introduction and motivation.....	51
4.2 Experimental procedures.....	53
4.2.1 Cutting test and materials.....	53
4.3 Experimental results and analysis.....	54
4.4 Conclusion.....	63
5 References.....	64
