

Table of contents

Analysis of variance (ANOVA) and Analysis of covariance (ANCOVA).....	7
<i>Analysis of Variance (ANOVA) models</i>	7
<i>Changing the base level</i>	10
<i>Analysis of Covariance (ANCOVA) models</i>	12
<i>ANCOVA without interaction term</i>	13
<i>ANCOVA with interaction term</i>	15
<i>Testing for structural change</i>	16
<i>Dummy variables in log-linear models</i>	19
<i>Modeling seasonality with dummy variables</i>	21
Methods to construct a multiple linear regression model.....	24
<i>Criteria of model quality</i>	24
<i>Forward selection</i>	24
<i>Backward elimination</i>	25
<i>Stepwise selection and elimination</i>	25
<i>All possible regressions</i>	26
Classical linear regression model.....	29
<i>Introduction</i>	29
<i>Classical assumption I</i>	32
<i>Classical assumption II</i>	37
<i>Classical assumption III</i>	38
<i>Classical assumption IV</i>	38
<i>Classical assumption V</i>	47
<i>Classical assumption VI</i>	52
<i>Classical assumption VII</i>	58
<i>Gauss-Markov (GM) theorem</i>	58
Distributed lag model and dynamic linear model.....	63
<i>Distributed lag model</i>	63
<i>Dynamic linear model</i>	65
<i>Serial correlation in dynamic linear models</i>	66
<i>Granger causality (precedence)</i>	67
<i>Spurious correlation (regression)</i>	68

<i>Stationary and non-stationary time series</i>	69
<i>Dickey – Fuller (DF) test</i>	71
<i>Augmented Dickey – Fuller (ADF) test</i>	73
<i>Kwiatkowski – Phillips – Schmidt – Shin (KPSS) test</i>	75
<i>Cointegration</i>	75
Box – Jenkins methodology	78
<i>Introduction</i>	78
<i>Box-Jenkins models of stationary time series</i>	78
<i>Autoregression process of first order, AR(1)</i>	80
<i>Autoregression process of p-th order, AR(p)</i>	81
<i>Process of 1-st order moving averages, MA(1)</i>	82
<i>Process of moving averages order q, MA(q)</i>	83
<i>Combined process ARMA(p, q)</i>	84
<i>Process of random walk</i>	85
<i>Integrated process of d order I(d)</i>	86
<i>Models of seasonal time series</i>	88
<i>Steps of Box-Jenkins methodology</i>	89
<i>Modeling volatility</i>	98
Analysis of categorical data	103
<i>Categorical (qualitative) data</i>	103
<i>Chi-square test of independence of categorical data</i>	104
<i>Coefficients of contingency</i>	106
<i>Application of linear regression to association tables</i>	112
Regression models with binary dependent variable, nonlinear models	115
<i>Linear probability model</i>	115
<i>Binomial logit model</i>	117
<i>Estimating binomial logit model</i>	118
<i>Interpreting coefficients of the binary logit model</i>	120
<i>Quality of fit in binary logit model</i>	122
<i>Binomial probit model</i>	125
<i>Multinomial logit model</i>	128
<i>Nonlinear models</i>	129
Literature	133
