1	Introduction	1
1.1	What Is Randomness and Does There Exist True Randomness?	1
1.2	Randomness as a Source of Efficiency – an Exemplary Application	5
1.3	Concept of the Book	11
1.4	To the Student	14
1.5	To the Teacher	16
2	Fundamentals	19
2.1	Objectives	19
2.2	Elementary Probability Theory	20
2.3	Models of Randomized Algorithms	37
2.4	Classification of Randomized Algorithms	51
2.5	Classification of Randomized Algorithms for Optimization Problems	72
2.6	Paradigms of the Design of Randomized Algorithms	87
2.7	Summary	96
3	Foiling the Adversary	101
3.1	Objectives	101
3.2	Hashing	102
3.3	Universal Hashing	109
3.4	Online Algorithms	116
3.5	Randomized Online Algorithms	120
3.6	Summary	128
4	Fingerprinting	131
4.1	Objectives	131
4.2	Communication Protocols	133
4.3	The Substring Problem	139

XII Contents

4.4	Verification of Matrix Multiplication	141
4.5	Equivalence of Two Polynomials	144
4.6	Summary	149
5	Success Amplification and Random Sampling	153
5.1	Objectives	153
5.2	Efficient Amplification by Repeating Critical Computation Parts	154
5.3	Repeated Random Sampling and Satisfiability	166
5.4	Random Sampling and Generating Quadratic Nonresidues	174
5.5	Summary	181
6	Abundance of Witnesses	183
6.1	Objectives	183
6.2	Searching for Witnesses for Primality Testing	184
6.3	Solovay-Strassen Algorithm for Primality Testing	192
6.4	Generation of Random Primes	202
6.5	Summary	206
7	Optimization and Random Rounding	209
7.1	Objectives	209
7.2	Relaxation to Linear Programming	210
7.3	Random Rounding and MAX-SAT	216
7.4	Combining Random Sampling and Random Rounding	222
7.5	Summary	225
A	Fundamentals of Mathematics	227
A.1	Objectives	227
A.2	Algebra and Number Theory	228
A.3	Combinatorics	256
A.4	Summary	264
