Introduction	3
1. Principles of biomass gasification	5
2. Selected techniques for the generation of energy from biomass	21
3. Biomass gasification processes and problems re-lated to tar by-products	41
4. Method for determining the "weight" of fuel type and type of combustion equipment for calculating pollutant emission factors from specific emissions of pollutants	59
5. Guidelines for the selection of reactive material for the purification of underground coal gasification water	79
6. The theoretical study of the treatment of wastewater generated during the conversion of fuel	91
7. Fenton's reaction as a method for wastewater treatment after gasification of biomass. The main parameters	114
8. Advanced methods for organically contaminat-ed wastewaters	129
