Contents

I. **The Position of Systematics Among the Biological Sciences** 1

General Concept of Systematics 1

The Special Tasks of Biological Systematics 3

The Phylogenetic System and Its Position Among the Possible and Necessary Systems in Biology 9

II. **Tasks and Methods of Taxonomy** 28

Taxonomic Tasks in the Area of the Lower Categories 29

Comparative holomorphology as an auxiliary science of taxonomy: The allomorphism of species 32

Chorological relationships of individuals and their significance for the taxonomy of lower group categories 46

The species category in the time dimension. The species concept and paleontology 56

Summary 65

The Taxonomic Task in the Area of the Higher Group Categories 70

The mode of origin of higher taxa and the question of their real existence 70

Taxonomic methods in the higher group categories 83

III. **Problems, Tasks, and Methods of Phylogenetics** 197

General 197

The concepts of evolution and phylogenesis 197

Monophyly and polyphyly 206

Dichotomy and radiation 209

Explosive radiation, typogenesis, and related concepts 216

Phylogenesis and Space 229

IV. **Concluding Remarks** 234

Bibliography 240
