

Contents

1	Use 3D space Task of Artificial intelligence	9
1.1	Introduction	9
1.2	Artificial intelligence tasks space	10
1.3	Use the tasks of AI space in building modeling	11
1.4	Problems associated with the use of AI in modeling	13
2	Fuzzy Classification	15
3	Missing Value Imputation Method Testing	19
3.1	Introduction	19
3.2	The Missing Values Problem	20
3.3	Strategies for Dealing with Missing Data	21
3.4	Testing Procedure of Missing Values Imputation Algorithm	21
3.5	Missing Values Mechanisms	22
3.5.1	Missing Completely at Random (MCAR)	22
3.5.2	Missing at Random (MAR)	22
3.5.3	Not Missing at Random (NMAR)	23
3.6	Generating Missing Values Using Rapidminer	23
3.7	Summary	26
4	Room Situation Recognition System	29
4.1	Introduction	29

4.2	Cellular automaton	30
4.2.1	Scaling, Rotation and Transferring	31
4.3	Hopfield Network	32
4.3.1	Hopfield Network Architecture	32
4.3.2	Learning algorithm	32
4.3.3	Output calculation	34
4.4	Prepared Training Patterns	34
4.5	Testing Process	36
4.6	Conclusion	36
5	On Vagueness and Semantic Differential Density	37
5.1	Intelligences in Communication	38
5.1.1	Forming and Communicating Message	38
5.1.2	Vagueness of Message and Meaning	39
5.1.3	Shift in Message Meaning	40
5.2	On Discrete Scales	41
5.2.1	Measuring Meaning	42
5.2.2	Semantic Differential	43
5.3	On Continuous scales	44
5.3.1	Aspect and Semantic Differential Density	44
5.4	Vagueness Measurement	46
5.5	Differential Density Excess, Diversity	48
5.5.1	Basic Concepts	48
5.5.2	Density Excess and Common Part of Ratings	50
5.5.3	Semantic Diversity of Aspect Ratings	53
5.5.4	Another Approach to Dissimilarity	53
5.5.5	Convergence of Meaning	54
5.6	Grouping Subjects Ratings	57
5.6.1	Ratings within a Group	58
5.6.2	Comparing Groups of Ratings	60
