

CONTENTS

1 Introduction	5
2 Novel experimental methodologies for rheological characterization of polymer melts	6
3 Development and evaluation of new constitutive equations for polymer melts	7
4 Theoretical and experimental investigation of flow instabilities occurring during polymer processing	8
4.1 Interfacial instabilities	9
4.1.1 Merging area, wave type of interfacial instabilities and TNSD sign stability criterion	10
4.1.2 Die exit region, zig-zag interfacial instabilities and the role of polymer processing aids	17
4.1.3 Development of interfacial instabilities in cast film and film blowing of LDPEs	18
4.2 Film blowing instabilities	19
4.3 Die drool phenomenon	22
5 Applied rheology for production and characterization of polymeric nanofiber based filters	25
6 Conclusion remarks	27
7 References	28
8 List of publications and patents comprising the DSc. Thesis	33
9 Scientometric data for M. Zatloukal	38
