I. INTRODUCTION	1
A. Symmetric waveguide with gain	2
B. Effect of magnetic layer	2
C. Modal cut-off	2
D. Use in optical telecommunications	2
E. History of nonreciprocal propagation	3
F. Phase shift at transverse magnetization	3
G. Plan	4
II. PRINCIPLE OF DIELECTRIC WAVEGUIDES	4
A. Reflection at a planar interface between two dielectrics	5
B. Film-substrate system	12
C. Characteristic equation	14
III. METAL-CLAD WAVEGUIDES	17
IV. YEH'S 4×4 MATRIX FORMALISM	20
A. Wave equation	20
B. Eigen-values and eigen-polarisations	21
C. Boundary conditions	22
D. Matrix representation of the multilayer structure	23
E. Reflection and transmission coefficients	24
F. Isotropic multilayers	25
G. Reflection at a single interface of isotropic media	26
H. A single layer dielectric waveguide	27
I. Two-layer dielectric waveguide	30
V. MAGNETO-OPTIC AT TRANSVERSE MAGNETISATION	33
A. Material tensors	33
B. Eigen-polarisations	34
C. Dynamic matrix	35
D. TM reflection of the radiation modes at transverse magnetisation	37
E. Waveguide with an interface at transverse magnetization	43
F. Non-reciprocal propagation in a dielectric film sandwiched between two half spaces at transverse magnetization	47
G. A two-layer waveguide with non-reciprocal propagation	49
H. TM reflection on a magnetic film at transverse magnetisation sandwiched between a non-magnetic cover and a non-magnetic substrate	54
VI. MAXWELL EQUATIONS	61
A. Systems with cylindrical symmetry	61
B. Planar structures	63
C. Reflection at an interface between an isotropic medium and a medium at transverse magnetization	65
D. TM modes in an isotropic waveguide	67
E. TM modes in a two-layer nonreciprocal waveguide	70
VII. CONCLUSIONS	75
