Preface	xix
Acknowledgments	xxi
List of Symbols	xxiii
List of Acronyms	xxxi
1 What are Chemical Sensors?	1
1.1 Chemical Sensors: Definition and Components	1
1.2 Recognition Methods	2
1.2.1 General Aspects	2
1.2.2 Ion Recognition	3
1.2.3 Recognition by Affinity Interactions	3
1.2.4 Recognition by Nucleic Acids	3
1.2.5 Recognition by Enzymes	4
1.2.6 Recognition by Cells and Tissues of Biological Origin	4
1.2.7 Gas and Vapor Sorption	4
1.3 Transduction Methods	4
1.3.1 General Aspects	4
1.3.2 Thermometric Transduction	5
1.3.3 Transduction Based on Mechanical Effects	5
1.3.4 Resistive and Capacitive Transduction	5
1.3.5 Electrochemical Transduction	5
1.3.6 Optical Transduction	6
1.4 Sensor Configuration and Fabrication	6
1.5 Sensor Calibration	7
1.6 Sensor Figures of Merit	8
1.6.1 Reliability of the Measurement	9
1.6.2 Selectivity and Specificity	10
1.6.3 Detection and Quantification Capabilities	10
1.6.4 Response Time	11
1.7 Sensor Arrays	11
1.7.1 Quantitative Analysis by Cross-Sensitive Sensor Arrays	11
1.7.2 Qualitative Analysis by Cross-Sensitive Sensor Arrays	12
1.7.3 Artificial Neural Network Applications in the Artificial Nose/Tongue	13
1.7.4 Outlook	14
1.8 Sensors in Flow Analysis Systems	14
1.9 Applications of Chemical Sensors	14
1.9.1 Environmental Applications of Chemical Sensors	15
1.9.2 Healthcare Applications of Chemical Sensors	15
1.9.3 Application of Chemical Sensors in the Food Industry, Agriculture and Biotechnology	16
1.9.4 Chemical Sensors in Defense Applications	16
1.10 Literature on Chemical Sensors and Biosensors	17
1.11 Organization of the Text	17
References	19
2 Protein Structure and Properties	21
2.1 Amino Acids	21
2.2 Chemical Structure of Proteins	22
2.3 Conformation of Protein Macromolecules	22
2.4 Noncovalent Chemical Bonds in Protein Molecules	24
2.5 Recognition Processes Involving Proteins	25
2.6 Outlook	26
References	27

3	Enzymes and Enzymatic Sensors	28
3.1	General	28
3.2	Enzyme Nomenclature and Classification	29
3.3	Enzyme Components and Cofactors	30
3.4	Some Enzymes with Relevance to Biosensors	32
3.4.1	Oxidases	32
3.4.2	Dehydrogenases	33
3.4.3	Hydrolases	34
3.4.4	Lyases	35
3.4.5	Outlook	35
3.5	Transduction Methods in Enzymatic Biosensors	36
3.5.1	Transduction Methods	36
3.5.2	Multienzyme Sensors	37
3.6	Kinetics of Enzyme Reactions	38
3.6.1	The Michaelis–Menten Mechanism	38
3.6.2	Other Mechanisms	40
3.6.3	Expressing the Enzyme Activity	41
3.6.4	pH Effect on Enzyme Reactions	42
3.6.5	Temperature Effect on Enzyme Reactions	43
3.6.6	Outlook	43
3.7	Enzyme Inhibition	44
3.7.1	Reversible Inhibition	44
3.7.2	Irreversible Inhibition	46
3.7.3	Enzymatic Sensors for Inhibitors: Design and Operation	46
3.7.4	Applications of Enzyme-Inhibition Sensors	46
3.8	Concluding Remarks	48
	References	48
4	Mathematical Modeling of Enzymatic Sensors	50
4.1	Introduction	50
4.2	The Enzymatic Sensor under External Diffusion Conditions	50
4.2.1	The Physical Model	50
4.2.2	The Mathematical Model	51
4.2.3	The Zero-Order Kinetics Case	52
4.2.4	The First-Order Kinetics Case	52
4.2.5	The Dynamic Range and the Limit of Detection under External Diffusion Conditions	54
4.3	The Enzymatic Sensor under Internal Diffusion Control	55
4.3.1	The Steady-State Response	55
4.3.2	The Transient Regime and the Response Time under Internal Diffusion Conditions	58
4.4	The General Case	60
4.4.1	The Model	60
4.4.2	Effect of the Biot Number	61
4.4.3	Effect of Partition Constants and Diffusion Coefficients	63
4.4.4	Experimental Tests for the Kinetic Regime of an Enzymatic Sensor	63
4.5	Outlook	64
	References	64
5	Materials and Methods in Chemical-Sensor Manufacturing	66
5.1	Introduction	66
5.2	Noncovalent Immobilization at Solid Surfaces	66
5.3	Covalent Conjugation	68
5.3.1	Zero-Length Crosslinkers	68
5.3.2	Bifunctional Crosslinkers	69
5.3.3	Immobilization by Protein Crosslinking	69
5.4	Supports and Support Modification	70
5.4.1	General Aspects	70
5.4.2	Natural Polymers	71
5.4.3	Synthetic Polymers	72
5.4.4	Coupling to Active Polymers	72
5.4.5	Coupling to Inactive Polymers	72

5.4.6	Inorganic Supports	73
5.4.7	Carbon Material Supports	73
5.4.8	Metal Supports	75
5.4.9	Semiconductor Supports	76
5.5	Affinity Reactions	77
5.6	Thin Molecular Layers	78
5.6.1	Self-Assembly of Amphiphilic Compounds	78
5.6.2	Bilayer Lipid Membranes	79
5.6.3	Alternate Layer-by-Layer Assembly	80
5.7	Sol-Gel Chemistry Methods	81
5.8	Hydrogels	83
5.8.1	Physically Crosslinked Hydrogels	84
5.8.2	Chemically Crosslinked Hydrogels	84
5.8.3	Redox Hydrogels	84
5.8.4	Responsive Hydrogels	84
5.9	Conducting Polymers	86
5.10	Encapsulation	88
5.11	Entrapment in Mesoporous Materials	89
5.12	Polymer Membranes	90
5.12.1	Deposition of Polymers onto Solid Surfaces	90
5.12.2	Perm-Selective Membranes	91
5.13	Microfabrication Methods in Chemical-Sensor Technology	92
5.13.1	Spot Arraying	92
5.13.2	Thick-Film Technology	92
5.13.3	Thin-Film Techniques	94
5.13.4	Soft Lithography	95
5.13.5	Microcontact Printing of Biocompounds	95
5.14	Concluding Remarks	97
	References	97
6	Affinity-Based Recognition	101
6.1	General Principles	101
6.2	Immunosensors	101
6.2.1	Antibodies: Structure and Function	101
6.2.2	Antibody–Antigen Affinity and Avidity	103
6.2.3	Analytical Applications	103
6.2.4	Label-Free Transduction Methods in Immunosensors	104
6.2.5	Label-Based Transduction Methods in Immunosensors	104
6.2.6	Enzyme Labels in Immunoassay	105
6.3	Immobilization Methods in Immunosensors	106
6.4	Immunoassay Formats	106
6.5	Protein and Peptide Microarrays	109
6.6	Biological Receptors	110
6.7	Artificial Receptors	111
6.7.1	Cyclodextrins and Host–Guest Chemistry	111
6.7.2	Calixarenes	113
6.7.3	Molecularly Imprinted Polymers (MIPs)	113
6.8	Outlook	115
	References	115
7	Nucleic Acids in Chemical Sensors	118
7.1	Nucleic Acid Structure and Properties	118
7.2	Nucleic Acid Analogs	121
7.3	Nucleic Acids as Receptors in Recognition Processes	122
7.3.1	Hybridization: Polynucleotide Recognition	122
7.3.2	Recognition of Non-Nucleotide Compounds	123
7.3.3	Recognition by Nucleic Acid Aptamers	124
7.4	Immobilization of Nucleic Acids	126
7.4.1	Adsorption	126
7.4.2	Immobilization by Self-Assembly	127

7.4.3	Immobilization by Polymerization	127
7.4.4	Covalent Immobilization on Functionalized Surfaces	128
7.4.5	Coupling by Affinity Reactions	128
7.4.6	Polynucleotides–Nanoparticles Hybrids	129
7.5	Transduction Methods in Nucleic Acids Sensors	129
7.5.1	Label-Free Transduction Methods	129
7.5.2	Label-Based Transduction	129
7.5.3	DNA Amplification	130
7.6	DNA Microarrays	131
7.7	Outlook	132
	References	133
8	Nanomaterial Applications in Chemical Sensors	135
8.1	Generals	135
8.2	Metallic Nanomaterials	136
8.2.1	Synthesis of Metal Nanoparticles	136
8.2.2	Functionalization of Gold Nanoparticles	137
8.2.3	Applications of Metal Nanoparticles in Chemical Sensors	138
8.3	Carbon Nanomaterials	138
8.3.1	Structure of CNTs	139
8.3.2	Synthesis of CNTs	140
8.3.3	Chemical Reactivity and Functionalization	140
8.3.4	CNT Applications in Chemical Sensors	142
8.3.5	Carbon Nanofibers (CNFs)	142
8.4	Polymer and Inorganic Nanofibers	144
8.5	Magnetic Micro- and Nanoparticles	145
8.5.1	Magnetism and Magnetic Materials	145
8.5.2	Magnetic Nanoparticles	146
8.5.3	Magnetic Biosensors and Biochips	146
8.5.4	Magnetic Nanoparticles as Auxiliary Components in Biosensors	148
8.5.5	Outlook	148
8.6	Semiconductor Nanomaterials	149
8.6.1	Synthesis and Functionalization of Quantum Dots	149
8.6.2	Applications of Quantum Dots	151
8.7	Silica Nanoparticles	151
8.7.1	Synthesis, Properties, and Applications	151
8.8	Dendrimers	152
8.8.1	Properties and Applications	152
8.9	Summary	153
	References	153
9	Thermochemical Sensors	157
9.1	Temperature Transducers	157
9.1.1	Resistive Temperature Transducers	157
9.1.2	Thermopiles	157
9.2	Enzymatic Thermal Sensors	158
9.2.1	Principles of Thermal Transduction in Enzymatic Sensors	158
9.2.2	Thermistor-Based Enzymatic Sensors	159
9.2.3	Thermopile-Based Enzymatic Sensors	160
9.2.4	Multienzyme Thermal Sensors	160
9.2.5	Outlook	161
9.3	Thermocatalytic Sensors for Combustible Gases	162
9.3.1	Structure and Functioning Principles	162
	References	163
10	Potentiometric Sensors	165
10.1	Introduction	165
10.2	The Galvanic Cell at Equilibrium	165
10.2.1	Thermodynamics of Electrolyte Solutions	166
10.2.2	Thermodynamics of the Galvanic Cell	167

10.3	Ion Distribution at the Interface of Two Electrolyte Solutions	170
10.3.1	Charge Distribution at the Junction of Two Electrolyte Solutions. The Diffusion Potential	170
10.3.2	Ion Distribution at an Aqueous/Semipermeable Membrane Interface	172
10.4	Potentiometric Ion Sensors – General	173
10.4.1	Sensor Configuration and the Response Function	173
10.4.2	Selectivity of Potentiometric Ion Sensors	175
10.4.3	The Response Range of Potentiometric Ion Sensors	177
10.4.4	Interferences by Chemical Reactions Occurring in the Sample	177
10.4.5	The Response Time of Potentiometric Ion Sensors	178
10.4.6	Outlook	178
10.5	Sparingly Soluble Solid Salts as Membrane Materials	178
10.5.1	Membrane Composition	178
10.5.2	Response Function and Selectivity	179
10.6	Glass Membrane Ion Sensors	181
10.6.1	Membrane Structure and Properties	181
10.6.2	Response Function and Selectivity	182
10.6.3	Chalcogenide Glass Membranes	183
10.7	Ion Sensors Based on Molecular Receptors. General Aspects	184
10.8	Liquid Ion Exchangers as Ion Receptors	185
10.8.1	Ion Recognition by Liquid Ion Exchangers	185
10.8.2	Charged Receptor Membranes	185
10.8.3	Response Function and Selectivity	186
10.8.4	Outlook	187
10.9	Neutral Ion Receptors (Ionophores)	187
10.9.1	General Principles	187
10.9.2	Chemistry of Ion Recognition by Neutral Receptors	188
10.9.3	Effect of Bonding Multiplicity, Steric, and Conformational Factors	189
10.9.4	Neutral Receptor Ion-Selective Membranes: Composition, Selectivity and Response Function	190
10.9.5	Neutral Noncyclic Ion Receptors	192
10.9.6	Macrocyclic Cation Receptors	193
10.9.7	Macrocyclic Anion Receptors	194
10.9.8	Neutral Receptors for Organic Ions	194
10.9.9	Porphyrins and Phthalocyanines as Anion Receptors	195
10.9.10	Outlook	196
10.10	Molecularly Imprinted Polymers as Ion-Sensing Materials	197
10.11	Conducting Polymers as Ion-Sensing Materials	198
10.12	Solid Contact Potentiometric Ion Sensors	198
10.13	Miniaturization of Potentiometric Ion Sensors	199
10.14	Analysis with Potentiometric Ion Sensors	200
10.15	Recent Advances in Potentiometric Ion Sensors	201
10.16	Potentiometric Gas Sensors	203
10.17	Solid Electrolyte Potentiometric Gas Sensors	204
10.17.1	General Principles	204
10.17.2	Solid Electrolyte Potentiometric Oxygen Sensors	205
10.17.3	Applications of Potentiometric Oxygen Sensors	206
10.17.4	Types of Solid Electrolyte Potentiometric Gas Sensors	207
10.17.5	Mixed Potential Potentiometric Gas Sensors	208
10.17.6	Outlook	209
10.18	Potentiometric Biocatalytic Sensors	210
10.19	Potentiometric Affinity Sensors	211
10.20	Summary	212
	References	213
