

# Table of contents

<b>Introduction to Geology of the Bohemian Massif</b> .....	1
<i>Major lithotectonic units and their boundaries in the interior of the Bohemian Massif</i> .....	1
<i>Variscan plutons in the Bohemian Massif</i> .....	7
<i>Further reading (introduction to the Bohemian Massif)</i> .....	7
<b>Descriptions of field stops</b> .....	9
<i>Day 1 (Saturday, 4<sup>th</sup> July, 2015) Supracrustal Teplá–Barrandian Unit and the early-orogenic subduction-related plutonism</i> .....	9
Neoproterozoic to Early Paleozoic evolution of the Teplá–Barrandian Unit: a brief overview ( <i>J. Žák, J. Hajná, V. Kachlik &amp; F. Vacek</i> ) .....	9
<b>Field stop 1:</b> Cadomian (Late Neoproterozoic–Early Cambrian) evolution of the Teplá–Barrandian Unit ( <i>J. Žák, contributing authors J. Hajná &amp; V. Kachlik</i> ) .....	17
<b>Field stop 2:</b> Early Palaeozoic evolution and Variscan inversion of the Prague Basin ( <i>J. Žák &amp; Z. Tasáryová, contributing author F. Vacek</i> ) .....	19
<b>Field stop 3:</b> Field stop 3: Štěnovice: Early Variscan calc-alkaline plutonism in the Bohemian Massif ( <i>J. Žák, V. Janoušek &amp; J. Trubač, contributing author Z. Kratinová</i> ) .....	21
<i>Further reading (Teplá–Barrandian Unit, including the Prague Basin)</i> .....	27
<i>Day 2 (Sunday, 5<sup>th</sup> July, 2015) Central Bohemian Plutonic Complex</i> .....	29
A brief introduction to the geology of the Central Bohemian Plutonic Complex ( <i>V. Janoušek, F.V. Holub, J. Žák, J. Trubač, A. Gerdes &amp; K. Verner</i> ) .....	29
<b>Field stop 4:</b> Emplacement mechanism, variability and likely genesis of the arc-related Sázava suite and magma mixing/mingling phenomena in the Teletín quarry ( <i>V. Janoušek &amp; J. Žák</i> ) .....	39
<b>Field stop 5:</b> Kozárovice – a high-K calc-alkaline intrusion of the Blatná suite, magma mixing phenomena ( <i>V. Janoušek &amp; J. Žák; contributing author B. Wiegand</i> ).....	48
<b>Field stop 6:</b> Štědrónín: plutonism and normal shearing along the southern margin of the Central Bohemian Plutonic Complex ( <i>J. Žák &amp; V. Janoušek</i> ).....	56
<b>Field stop 7:</b> Klokoty (ultrapotassic two-pyroxene syenitoids of the Tábor Pluton) ( <i>V. Janoušek, F. V. Holub, K. Verner &amp; J. Žák; contributing authors A. Gerdes &amp; R. Čopjaková</i> ) .....	61
<i>Further reading (Central Bohemian Plutonic Complex)</i> .....	69
<i>Day 3 (Monday, 6<sup>th</sup> July, 2015) Blanský les granulite Massif and durbachites</i> .....	71
Introduction to the HP–HT Moldanubian granulites and Blanský les granulite Massif ( <i>V. Janoušek, J. Franěk &amp; S. Vrána, contributing author V. Erban</i> ).....	71
<i>Traverse of Mt. Klet' on foot (J. Franěk, V. Janoušek &amp; S. Vrána)</i> .....	80
<b>Field stop 8a:</b> Mt. Klet', near the summit – structure of the Blanský les granulite Massif.....	82
<b>Field stop 8b:</b> Mt. Klet', At the observatory – relations between mafic and felsic granulites.....	84
<b>Field stop 9a:</b> Kokotín crossroad – high-pressure melting in the Variscan orogenic root?.....	85
<b>Field stop 9b:</b> Kokotín viewpoint – pristine banded S <sub>1</sub> granulites.....	89
<b>Field stop 10:</b> Plešovice – felsic high-pressure Grt ± Ky granulites of the Blanský les Massif, hyperpotassic granulites and ultrabasic bodies ( <i>V. Janoušek, J. Franěk &amp; S. Vrána</i> ) .....	92
<b>Field stop 11:</b> Skalka (Boletice Military Training Area) – Knižecí Stolec durbachitic pluton ( <i>K. Verner &amp; F. V. Holub</i> ).....	98
<i>Further reading (high-pressure Moldanubian granulites)</i> .....	101
<i>Further reading (durbachites)</i> .....	101
<i>Day 4 (Tuesday, 7<sup>th</sup> July, 2015) Moldanubian Batholith</i> .....	103
A brief introduction to the geology of the Moldanubian Batholith ( <i>K. Verner, M. René &amp; J. Žák; contributing author V. Janoušek</i> ) .....	103
<i>Further reading (Moldanubian Batholith)</i> .....	108
<b>Field stop 12:</b> Rájov – Relics of the Eburnean (~2.1 Ga) quartz dioritic orthogneisses ( <i>J. Trubač, V. Janoušek &amp; S. Vrána, contributing author B. Wiegand</i> ) .....	109
<b>Field stop 13:</b> Sokolčí – Weinsberg granite ( <i>K. Verner, J. Žák &amp; K. Johnson</i> ) .....	115
<b>Field stop 14:</b> Mrákotín quarry – Eisgarn type granites of the Mrákotín Composite Pluton ( <i>K. Verner &amp; J. Žák</i> ).....	116
<i>Day 5 (Wednesday, 8<sup>th</sup> July, 2015) Moldanubian Batholith II</i> .....	125
<b>Field stop 15:</b> Vanov quarry – a transition from migmatites to crustally-derived granites ( <i>K. Verner &amp; K. Johnson</i> ).....	125
<b>Field stop 16:</b> Rácov quarry – magmatic stoping and deformation at the upper crustal level ( <i>J. Žák, K. Verner</i> ).....	127
<b>Field stop 17:</b> Dolní Město, quarry – the Melechov Pluton ( <i>J. Trubač, J. Žák &amp; V. Janoušek</i> ).....	131
<i>Summary of stops 14–17: tectonic evolution of the Pelhřimov Complex</i> .....	139
<b>Variscan plutonism in the Bohemian Massif: a synthesis</b> ( <i>V. Janoušek &amp; J. Žák</i> ).....	140
<b>References</b> .....	145
