Main author's introductory word	6
Short guide through the book	6
Team of authors	7
Main publisher's introductory word	9

Industrial Establishment and Designing of CNC Machine Tools

1.1 Value-creating chain of a CNC machine tool	16
1.2 Attributes of a successful enterprise	20
1.3 Designing process	24
1.4 Designing criminalistics and company's criminology	36
1.5 Value management	42
1.6 Analytical calculations at designing of CNC machine tools	54
1.7 Computer support of strength calculations at designing of machines	58
1.8 Designing process of a new safe machine tool	74
1.9. Design of machine tools	100

Introduction to Designing of CNC Machine Tools

2.1 Machinery and industrial engineering	126
2.2 Essential terms from the machine-tool branch	134
2.3 About CNC machines	138
2.4 History of Czech and Moravian technical universities	152
2.5 History of Czech and Moravian enterprises manufacturing CNC machines	160

Design of Essential Groups at CNC Machine Tools

3.1 Supporting structure of machine tools	170
3.2 Machine-tool headstock	192
3.3 Linear feed assemblages	122
3.4 Rotary drive assemblages	264
3.5 Automatic tool exchange	272
3.6 Automatic workpiece exchange	288
3.7 Tooling systems	300
3.8 Active check and technical diagnostics of CNC machines	316
3.9 Numerical control of CNC machine tools	326
3.10 Functional and servicing sets at CNC machine tools	332
3.11 Protective guards	342
3.12 Workpiece chucking	352

Machining centres

4.1 CNC lathe-type machines and machining centres specified to make rotary parts	366
4.2 CNC machining centres specified to make non-rotary parts	384
4.3 CNC multifunctional machining centres	422

Other CNC Machine Tools

5.1 CNC drilling and boring machines	448
5.2 CNC grinding machines	472
5.3 CNC machines for gear production	488
5.4 Heavy machine tools	500
5.5 High-speed cutting machines	522
5.6 Machining centres with the unconventional kinematic structure	542
5.7 Cost-optimized CNC machine tools	558

CNC Machine Tools for Special Manufacture

6.1 Automatized production systems	566
6.2 Machines for special applications	584
6.3 Machines for unconventional machining technologies	602

Value Added at CNC Machine Tools

7.1 Energy efficiency improvement in machine tools	612
7.2 Intelligent CNC machine tools and their design	622
7.3 Mechatronics at designing of CNC machine tools	630

Development Directions of CNC Machine Tools

8.1 Factors affecting the development of CNC machine tools	650
8.2 The effect of global economy on the competitive environment	658
8.3 Virtual prototyping of machine tools	666

Practical Knowledge and Experience from Operation of CNC Machine Tools

9.1. Practical knowledge from CNC chip machining technology	678
9.2 Practical knowledge from designing of CNC machine tools	692
9.3 Testing of CNC machine tools	696
9.4 Retrofitting of CNC machine tools	710
9.5 Selection of the suitable CNC machine tool	714
9.6 Delivery and service of the CNC machine tool	718
9.7 Operability of CNC machine tools	722
