<i>Preface</i>	x
<i>Dedication</i>	xii
1 Introduction	1
1.1 What is Econometrics?	1
1.2 The Disturbance Term	2
1.3 Estimates and Estimators	4
1.4 Good and Preferred Estimators	5
General Notes	6
Technical Notes	10
2 Criteria for Estimators	11
2.1 Introduction	11
2.2 Computational Cost	11
2.3 Least Squares	12
2.4 Highest R^2	13
2.5 Unbiasedness	14
2.6 Efficiency	16
2.7 Mean Square Error	17
2.8 Asymptotic Properties	18
2.9 Maximum Likelihood	21
2.10 Monte Carlo Studies	22
2.11 Adding Up	25
General Notes	26
Technical Notes	32
3 The Classical Linear Regression Model	40
3.1 Textbooks as Catalogs	40
3.2 The Five Assumptions	41

3.3	The OLS Estimator in the CLR Model	43
	General Notes	44
	Technical Notes	47
4	Interval Estimation and Hypothesis Testing	51
4.1	Introduction	51
4.2	Testing a Single Hypothesis: the t Test	51
4.3	Testing a Joint Hypothesis: the F Test	52
4.4	Interval Estimation for a Parameter Vector	54
4.5	LR, W, and LM Statistics	56
4.6	Bootstrapping	58
	General Notes	59
	Technical Notes	67
5	Specification	71
5.1	Introduction	71
5.2	Three Methodologies	72
5.3	General Principles for Specification	75
5.4	Misspecification Tests/Diagnostics	76
5.5	R^2 Again	79
	General Notes	81
	Technical Notes	89
6	Violating Assumption One: Wrong Regressors, Nonlinearities, and Parameter Inconstancy	93
6.1	Introduction	93
6.2	Incorrect Set of Independent Variables	93
6.3	Nonlinearity	95
6.4	Changing Parameter Values	97
	General Notes	100
	Technical Notes	106
7	Violating Assumption Two: Nonzero Expected Disturbance	109
	General Notes	111
8	Violating Assumption Three: Nonspherical Disturbances	112
8.1	Introduction	112
8.2	Consequences of Violation	113
8.3	Heteroskedasticity	115
8.4	Autocorrelated Disturbances	118
8.5	Generalized Method of Moments	122
	General Notes	123
	Technical Notes	129
9	Violating Assumption Four: Instrumental Variable Estimation	137
9.1	Introduction	137
9.2	The IV Estimator	141
9.3	IV Issues	144

General Notes	146
Technical Notes	151
10 Violating Assumption Four: Measurement Errors and Autoregression	157
10.1 Errors in Variables	157
10.2 Autoregression	160
General Notes	163
Technical Notes	167
11 Violating Assumption Four: Simultaneous Equations	171
11.1 Introduction	171
11.2 Identification	173
11.3 Single-Equation Methods	176
11.4 Systems Methods	180
General Notes	181
Technical Notes	186
12 Violating Assumption Five: Multicollinearity	192
12.1 Introduction	192
12.2 Consequences	193
12.3 Detecting Multicollinearity	194
12.4 What To Do	196
General Notes	198
Technical Notes	202
13 Incorporating Extraneous Information	203
13.1 Introduction	203
13.2 Exact Restrictions	203
13.3 Stochastic Restrictions	204
13.4 Pre-Test Estimators	204
13.5 Extraneous Information and MSE	206
General Notes	207
Technical Notes	211
14 The Bayesian Approach	213
14.1 Introduction	213
14.2 What is a Bayesian Analysis?	213
14.3 Advantages of the Bayesian Approach	216
14.4 Overcoming Practitioners' Complaints	217
General Notes	220
Technical Notes	226
15 Dummy Variables	232
15.1 Introduction	232
15.2 Interpretation	233
15.3 Adding Another Qualitative Variable	234
15.4 Interacting with Quantitative Variables	235

15.5 Observation-Specific Dummies	236
General Notes	237
Technical Notes	240
16 Qualitative Dependent Variables	241
16.1 Dichotomous Dependent Variables	241
16.2 Polychotomous Dependent Variables	244
16.3 Ordered Logit/Probit	245
16.4 Count Data	246
General Notes	246
Technical Notes	254
17 Limited Dependent Variables	262
17.1 Introduction	262
17.2 The Tobit Model	263
17.3 Sample Selection	265
17.4 Duration Models	267
General Notes	269
Technical Notes	273
18 Panel Data	281
18.1 Introduction	281
18.2 Allowing for Different Intercepts	282
18.3 Fixed Versus Random Effects	284
18.4 Short Run Versus Long Run	286
18.5 Long, Narrow Panels	287
General Notes	288
Technical Notes	292
19 Time Series Econometrics	296
19.1 Introduction	296
19.2 ARIMA Models	297
19.3 VARs	298
19.4 Error Correction Models	299
19.5 Testing for Unit Roots	301
19.6 Cointegration	302
General Notes	304
Technical Notes	314
20 Forecasting	331
20.1 Introduction	331
20.2 Causal Forecasting/Econometric Models	332
20.3 Time Series Analysis	333
20.4 Forecasting Accuracy	334
General Notes	335
Technical Notes	342

21 Robust Estimation	345
21.1 Introduction	345
21.2 Outliers and Influential Observations	346
21.3 Guarding Against Influential Observations	347
21.4 Artificial Neural Networks	349
21.5 Nonparametric Estimation	350
General Notes	352
Technical Notes	356
22 Applied Econometrics	361
22.1 Introduction	361
22.2 The Ten Commandments of Applied Econometrics	362
22.3 Getting the Wrong Sign	368
22.4 Common Mistakes	372
22.5 What do Practitioners Need to Know?	373
General Notes	374
Technical Notes	383
23 Computational Considerations	385
23.1 Introduction	385
23.2 Optimizing via a Computer Search	386
23.3 Estimating Integrals via Simulation	388
23.4 Drawing Observations from Awkward Distributions	390
General Notes	392
Technical Notes	397
Appendix A: Sampling Distributions, The Foundation of Statistics	403
Appendix B: All About Variance	407
Appendix C: A Primer on Asymptotics	412
Appendix D: Exercises	417
Appendix E: Answers to Even-Numbered Questions	479
Glossary	503
Bibliography	511
Name Index	563
Subject Index	573
