1	Introduction	1
	Introduction	1
	Reproductive modes of the teleosts	2
	Gender systems of teleosts	2
	Spawning dynamics	4
	Modes of fertilisation	5
	Mating systems	5
	Secondary sexual characteristics	6
	Parental care	б
	Reproductive guilds	6
	Reproductive diversity in teleosts: an explanatory framework	6
	Phylogenetic relationships of the teleosts	8
	Life-history theory	9
	Aims of the volume	11
2	Sex determination	13
	Introduction	13
	Genotypic sex determination	14
	Monofactorial genotypic sex determination	14
	Multifactorial genotypic sex determination	20
	Polyfactorial (polygenic) genotypic sex determination	20
	Environmental sex determination	21
	Evolution of sex-determining mechanisms	26
3	Sex differentiation	31
	Introduction	31
	Embryology of the gonads	32
	Origin and migration of primordial germ cells	33
	Sex differentiation in the gonadal anlagen	35
	Initial differentiation of the gonads	36

	Initial differentiation of ovaries	38
	Initial differentiation of testes	38
	Genetic control of early gonadal differentiation	40
	Synthesis	42
4	Gametogenesis	45
	Introduction	46
	Structure of ovaries	48
	Gross morphology of the ovaries	48
	Development of female gonoducts	51
	Oogenesis	52
	Oogonial proliferation and oogonial nest formation	53
	Chromatin nucleolus stage	53
	Primary growth	54
	Secondary growth – vitellogenesis	55
	Vitellogenin and the zona pellucida proteins	56
	Polarity of the oocyte	58
	Oocyte maturation	58
	Ovulation	60
	Atresia	60
	Fertilisation	62
	Genetic control of oogenesis	64
	Dynamics of oocyte development	65
	Spawning dynamics and fecundity	66
	Structure of the testes	66
	Gross morphology of a testis	66
	Development of male gonoducts	69
	Accessory structures associated with the testes and gonoducts	70
	Spermatogenesis	/1
	Spermatocysts	/1
	Serton cens	71
	stages of spermatogenesis within a spermatogenic	72
	Differentiated charmategonia	75
	Differenciated spermatogonia	75
	Secondary spermatocysts	73
	Spermatids	73
	Spermation and capacitation	75
	Types of spermatozoa	75
	Structure and phylogenetic distribution	76
	Spermatozoa viability	77
	Genetic control of spermatogenesis	79
	Dynamics of spermatogenesis	79
	Quantitative analysis of sperm production	80
5	Endocrinology of reproduction	81
	Introduction	82
	Brain-pituitary-gonad reproductive axis in vertebrates	83
	Levels of analysis	85

	Gonadal steroids	86
	Sex steroid synthesis	86
	Sex steroid receptors	87
	Endocrine control of oogenesis	88
	Opponial proliferation and primary growth	88
	Secondary growth: vitellogenesis	89
	Maturation and ovulation	90
	Endocrine control of oogenesis in species with batch spawning	91
	Endocrine control of spermatogenesis	93
	Spermatogonial proliferation	95
	Initiation of meiosis and formation of spermatocysts	95
	Spermiation	96
	Patterns of snawning in relation to spermatogenesis	96
	The pituitary and the gonadotrophins	98
	Brain- pituitary relationship	08
	Consider relationship	90
	Conadotrophis and gonadotrophins	100
	Gonadotrophin receptors	100
	Consider releasing hormone	101
	Gonadotrophin-releasing hormone	101
	Consider technic releasing hormonie	102
	Gonadotrophin-releasing normone receptors	102
	Listribution of gonadotrophin-releasing normone neurons	102
	in the brain	103
	Role of dopamine as an inhibitor of reproduction	104
	Role of other brain factors in the control of gonadotrophs	105
	Feedback control in the brain–pituitary–gonad reproductive axis	106
	A provisional model for the control of the developmental	100
	dynamics of ovaries and testes	109
	Puberty in teleosts	109
	Physiological control of puberty	110
	Interactions between growth and reproductive axes	113
	Endocrines, behaviour and secondary sexual characteristics	116
	Four model species	117
	Role of endocrines in regulation of reproductive behaviour	118
	Sensory systems	118
	Central integrative systems	118
	Motor systems	120
	Endocrines and secondary sex characteristics	120
	Effect of social interactions on reproductive endocrines	121
	Role of pheromones in reproductive interactions	122
	Endocrine-disrupting chemicals	123
	Conclusions	125
6	Environmental control of reproduction	127
	Introduction	128
	Seasonal patterns of reproduction	128
	Global seasonal patterns	128
	Ultimate factors	129
	Proximate factors	130

	Spawning seasonality in freshwater systems	130
	Spawning seasonality in marine species	132
	Lunar-related reproductive cycles	134
	Intertidal spawners	135
	Coral reef spawners	135
	Freshwater spawners	136
	Diel reproductive cycles	136
	Multiple environmental cycles	136
	Endogenous cycles and reproductive activity	137
	Proximate factors	138
	Photoperiod and temperature	139
	Lunar-related and tidal cycles	143
	Rainfall, flooding and other cues	143
	Social factors as cues	144
	Stress and reproduction	144
	Neuroendocrine mechanisms mediating environmental effects	147
	Food as a proximate factor	150
	Feeding and capital breeders	151
	Feeding and income breeders	154
	Feeding and skipped spawnings	155
	Physiological basis for the effect of feeding on reproduction	156
	Conclusions	157
7	Migration, territoriality and spawning site selection	159
	Introduction	160
	Migration	160
	Terms and definitions	161
	Migratory patterns associated with reproduction	162
	Adaptive significance of reproductive migrations	164
	Energetic costs of migration	166
	Survival costs of migration	167
	Physiological adaptations associated with migration	167
	Mechanisms of orientation and homing during spawning	
	migrations	168
	Control of timing of migration	171
	Human impacts on migration	172
	Territoriality	173
	The concept of territoriality and definitions	174
	Adaptive significance of territoriality	174
	Cost-benefit analysis and evolutionary stable strategy	174
	Aggression and territoriality	175
	Patterns of occurrence of territoriality	176
	Establishment and maintenance of territories	180
	Physiological basis of territoriality	182
	Energetic costs of territoriality	184
	Genetic basis of territoriality	184
	Territoriality and population dynamics	185
	Spawning site selection	188
	Sites for reproduction	188

	Site selection without habitat modification	188
	Site preparation	189
	Site excavation	189
	Site preparation and young brooded elsewhere	190
	Site preparation and eggs buried	191
	Excavation of shelters and tunnels	192
	Nest construction	193
	Terrestrial spawning sites	195
	Cues used in spawning site selection	107
	Snawning symbioses	107
	Conclusions	200
	conclusions	200
8	Mating systems and sexual selection	201
	Introduction	202
	Classification of mating systems	203
	Sexual selection and theories of mate choice	204
	Direct intersexual selection	205
	Indirect intersexual selection	206
	Good genes	207
	Compatible genes	207
