

CONTENTS

Chapter 1. Kinematics

Chapter 1A. The Plate Tectonic History of the Past Tethys Ocean

Luc-Emmanuel Ricou

I. Introduction	3
II. Review of the Controversial Problems and the Solutions Adopted ..	9
A. The Permo-Triassic Megashear between Gondwana and Laurussia	9
B. Fit Positions in Eastern Gondwana	12
C. Lateral Expulsion in Southeastern Asia	15
D. Constructing the Cenozoic Triple Junction off Australia	16
E. A Cryptic Suture in Thailand	18
F. The Enigmatic Argo Block	20
G. Drama: A Newly Discovered Block in the Eastern Mediterranean	21
H. The Maghreb Jurassic Transform Zone	23
I. A Reappraisal of the Caribbean Area	26
III. Transit Plates: Introducing a New Concept	28
A. Northward Migration	28
B. System Asymmetry	28
C. Southward Shift of Active Margins	29
D. Southward Shift of Ridges	29
IV. Step-by-Step Commentary	31
A. The Late Hercynian Epoch	32
B. The Late Triassic to Jurassic Tethys Growth Epoch	40
C. The Jurassic Tethys as a Seaway	45

D. The Cretaceous Disrupted Tethys Epoch	46
E. The Cretaceous Tethys as a Seaway	52
F. The Cenozoic Tethys Decay Epoch	53
G. The Cenozoic Tethys as a Seaway	59
V. Conclusions	61
References	62

Chapter 1B. Apparent Polar Wandering Paths for North America, Europe, Africa, Laurussia, and West Gondwana Since the Upper Carboniferous: A Review

J. Besse, H. Théveniaut, and V. Courtillot

I. Introduction	71
II. Paleomagnetic Database	72
A. African Database (0 to 300 Ma)	73
B. South American Database (180 to 300 Ma)	73
C. Indian Database (0 to 110 Ma)	78
D. Eurasian Database (0 to 300)	79
E. North American Database (0 to 300)	80
III. Synthetic APWP's from Present to 200 Ma	81
IV. Synthetic APWP's from 200 to 300 Ma	86
A. Laurasia	86
B. Gondwana	86
V. Comparisons Between Gondwanan and Laurussian Synthetic APWPs: Pangea Configurations	90
VI. Conclusions	92
References	93

Chapter 2. New Geologic Data

Chapter 2A. Late Carboniferous to Recent Geodynamic Evolution of the West Gondwanian Cratonic Tethyan Margins

René Guiraud and Yves Bellion

I. Introduction	101
II. Late Carboniferous–Liassic Rifting and Magmatic Episodes	102
III. Late Jurassic–Early Cretaceous Rifting and Magmatic Episodes	105
A. Late Jurassic–Early Aptian	105
B. Late Aptian–Albian	108
IV. Late Cretaceous–Mid-Eocene Sag Stage of Basin Deepening	109
A. Santonian, Latest Cretaceous, and Intra-Eocene Compressional Events	110

V. The Late Eocene to Recent Geodynamic Evolution	113
A. Rifting, Uplift, Magmatism	113
B. Compressional Events	115
VI. Conclusions	116
References	119

Chapter 2B. Crustal-Scale, Thrust Complex in the Rhodope Massif: Evidence from Structures and Fabrics

Jean-Pierre Burg, Laslo Klain, Zivko Ivanov, Luc-Emmanuel Ricou,
and Dino Dimov

I. Introduction	125
II. Major Tectonic Features of the Rhodope Massif	126
III. Deformation Regime and History	128
A. Deformation Phases	128
B. Deformation Regime and Intensity	128
C. Sense-of-Shear Criteria	130
IV. Quartz Petrofabrics	130
A. Technique of Analysis	130
B. Quartz, Crystallographic Fabrics	130
V. Synmetamorphic, Thrust System	135
A. The Lower Terrane: Schist–Carbonate–Gneiss Sequence	138
B. The Upper Terrane: Mafic–Ultramafic–Gneiss Sequence	138
C. Intermediate Thrust Sheets	140
D. Mesozoic Schists	141
VI. Crustal Extension, Ductile Features	142
A. Backward, Crustal Stretching	142
B. Gneiss Domes	143
VII. Conclusions	143
VIII. Epilogue: A Geodynamic Discussion	144
References	146

Chapter 3. Paleogeographic Reconstruction

Chapter 3A. Late Permian to Late Triassic, Tethyan Paleoenvironments—Three Snapshots: Late Murgabian, Late Anisian, Late Norian

Jean Marcoux and Aymon Baud

I. Introduction	153
II. Late Murgabian	155
A. Main Paleoenvironments	155

III. Late Anisian (237 to 234 Ma)	158
A. Main Characteristics	158
B. Main Paleoenvironments	160
IV. Late Norian (215 to 212 Ma)	162
A. Main Characteristics	162
B. Paleoenvironments	164
V. Regional Distribution and Evolution of the Paleoenvironments	166
A. Southeast Pangea (Eastern Gondwana) and Southeastern Tethys	166
B. Northern Indian Margin and Continental India	167
C. The Arabian Margin of the Neo-Tethys	169
D. Central and Eastern Mediterranean Rift	170
E. Taurus-Apulia Shelf	171
F. Western End of the Neo-Tethys and Related Seaways and Platforms	172
G. The Permian-Triassic Transit Tethys Blocks	175
H. Paleo-Tethyan Remnants, Active Margins and Backarc Basins	178
I. Northeast Tethyan Margin and Platforms	179
<i>References</i>	180

Chapter 3B. Paleogeography and Paleoenvironment of the Tethyan Realm during the Jurassic Breakup of Pangea

Eric Fourcade, Jacques Azéma, Jean-Paul Bassoullet, Fabrizio Cecca,
Jean Dercourt, Raymond Enay, and René Guiraud

I. Introduction	191
II. Main Characteristics	192
III. Kinematics	194
IV. Paleolatitude Grid	194
A. Late Sinemurian	194
B. Mid-Toarcian (184 to 182 Ma)	197
C. Mid-Callovian (162 to 158 Ma)	200
D. Early Kimmeridgian (146 to 144 Ma)	203
E. Late Tithonian (138 to 135 Ma)	207
V. Conclusions	210
<i>References</i>	211

Chapter 3C. The Cretaceous Tethys

Jean-Pierre Masse, Jean Philip and Gilbert Camoin

I. Introduction	215
-----------------------	-----

II. General Features	215
III. Paleogeographic Changes through Time: An Overall Picture	217
A. The Berriasian Regressive Trends and the Neo-Cimmerian Events	217
B. The Late Berriasian–Early Valanginian Marine Restoration: The Onset of the “Cretaceous Transgression”	218
C. The Mid-Valanginian Events: A Major Break and the Stepwise, Late Valanginian–Hauterivian Transgressions	218
D. The Barremian: Regressive Trends and the Austro–Alpine Events	219
E. The Latest Barremian–Early Aptian, Marine Inundation	220
F. The Mid-Aptian Events: The Onset of the Mid-Cretaceous Regime	222
G. Albian: The Cretaceous–Tethys Revolution	223
H. Cenomanian–Lower Turonian: A Major Transgressive Period ..	225
I. Turonian	227
J. Lower Senonian (Coniacian–Santonian)	228
K. Late Campanian–Maastrichtian: The Inauguration of the Cenozoic Organization	228
References	231

Chapter 4. Synthetic View

Chapter 4A. Tethyan Carbonate Platforms

Jean Philip, Jean-Pierre Masse, and Gilbert Camoin

I. Introduction	239
II. Paleogeographic Features	240
A. Pericratonic, Carbonate Platforms	240
B. Isolated Carbonate Platforms on Passive Margins	243
C. Isolated Carbonate Platforms on Obducted Blocks	245
D. Carbonate Platforms in Island-Arc Settings	245
III. Geological History	246
A. Permian	246
B. Triassic	246
C. Jurassic	247
D. Cretaceous	248
E. Paleogene	249
F. Neogene	250
IV. Dynamics through Time	251
A. Latitudinal Extent	251
B. Surfaces Covered	253

C. Climatic Factors	257
D. Relationship with Continental and Basinal Sedimentation	258
V. Conclusions	261
<i>References</i>	262

Chapter 4B. Radiolarians and Tethyan Radiolarites from Primary Production to Their Paleogeography

Patrick De Wever, François Baudin, Jacques Azéma,
and Eric Fourcade

I. Introduction	267
II. The Siliceous Plankton: Cytology, Biology, and Ecology of Radiolarians	268
A. General Characteristics	268
B. Cellular Organization	268
C. Biology	269
D. Ecology	269
III. Siliceous Sediments: Taphonomy of Radiolarians	271
A. Dissolution of Tests	274
B. Diagenesis	277
IV. Radiolarians within the Geological Series	281
A. Favorable Periods for Radiolarite Deposition	282
B. Sedimentation Rates of Radiolarites	284
C. Stratification	286
D. Domain of Radiolarite Deposition	288
E. Comparison with Deposits Associated with Radiolarites	288
V. Tethyan Radiolarites	290
A. Diachronism of Appearance, Synchronism of the Disappearance of Radiolarites	290
B. Sites of Tethyan Radiolarite Deposition	292
C. Paleogeography of Tethyan Radiolarites	293
VI. Assessment	306
<i>References</i>	308

Chapter 4C. Paleoenvironments and Organic-Rich Facies Deposition in the Tethyan Realm: Toarcian, Kimmeridgian, and Cenomanian Time Intervals

François Baudin and Jean-Paul Herbin

I. Introduction	319
II. Organic-Rich Facies: Data	320
A. Toarcian	321

B. Kimmeridgian	327
C. Cenomanian	332
III. Depositional Controls of Tethyan, Organic-Rich Facies	337
A. Paleolatitude and Climate	337
B. Oceanic Seaways and Water Ventilation	338
C. Basin Morphology and Structural Evolution	338
IV. Summary and Conclusions	339
<i>References</i>	340

Chapter 4D. Geodynamics of Bauxites in the Tethyan Realm

Pierre-Jean Combes and György Bardossy

I. Introduction	347
II. The Main Modes of Bauxite Formation	348
A. Lateritic and Karst Bauxite Deposits	348
B. The Main Modes of Formation	349
III. Types of Deposits	353
A. Intra- and Pericontinental Deposits	353
B. Deposits on Insular Platforms	355
C. Secondary Resedimented Deposits	355
IV. The Main Periods of Bauxite Formation	356
A. Method of Dating	356
B. Periods of Bauxite Formation	356
V. The Major Geodynamic Factors of Bauxite Formation in the Tethyan Realm	357
A. Paleoclimatic Factors	357
B. Eustatic Control	358
C. Tectonic Control	358
D. Role of Paleogeography and the Distribution of Emerged Areas	359
VI. Conclusions: The Tethyan Bauxites as Geodynamic Indicators	363
<i>References</i>	364

Chapter 4E. Tethyan Phosphates and Bioproductites

Jacques Lucas and Liliane Prévôt-Lucas

I. Introduction	367
II. Distribution of Tethyan Phosphorites	368
III. Common Features of Tethyan Phosphatic Series	372
A. At the Scale of the Deposit	373
B. Phosphorites s.s.	373

IV. Some Specific Characters of Several Deposits	374
A. The Deposits of the Ionian Zone Known in Greece and Albania	374
B. The Deposits of Negev, Israel	375
C. The Deposits of Egypt	375
D. The Phosphate Deposit of Gafsa-Metlaoui in Tunisia	376
E. The Phosphate Deposits of Morocco	376
V. General Reflections on the Genesis of Phosphorites	377
VI. Nature and Location of Bioproductites versus the Evolution of Tethys	382
VII. Conclusions	386
References	387

**Chapter 4F. The Economic Gold Deposits of Southeast Asia,
the Caraibes, and the Alpine-Himalayan Fold Belts:
A Metallogenic Marker of Tethyan Geodynamic
Evolution**

Francis Tollon, Pierre Courjault-Radé, and Jean-Jacques Bache

I. Introduction	393
II. Southeastern Asia Segment	394
A. Main Features of the Geological Setting	394
B. Main Phases of Geodynamic Evolution	396
C. Spatial and Temporal Distribution of Economic Gold Deposits	396
III. Caraibes Segment	400
A. Main Features of the Geological Setting	400
B. Main Phases of Geodynamic Evolution	402
IV. Alpine-Himalayan Segment	404
A. Outline of the Geological Setting and Geodynamic Evolution ..	404
B. Spatial and Temporal Distribution of Economic Auriferous Deposits	405
V. Conclusions and Discussion	411
References	414

**Chapter 4G. Reconstruction of Tethyan Salinity Through
the Extrapolation of Present-Day Physicochemical Data**

Alain Lévy

I. Introduction	417
II. Present Environments Data	418
A. Present Ocean Salinity	418

B. Salinity of Some Coastal Models	421
III. Data on Paleoenvironments	424
A. Reconstruction of Tethyan Paleosalinities by Extrapolation from Present-Day Data	426
IV. Conclusions	458
References	458

Chapter 5. From Tethys to Panthalassa

Chapter 5A. The Role of Tethys in the Evolution of the Northern Andes between Late Permian and Late Eocene Times

Etienne Jaillard, Thierry Sempere, Pierre Soler, Gabriel Carlier,
and René Marocco

I. Introduction	463
A. Purpose	463
B. Paleogeographic Framework	464
II. Outline of the Evolution of the Andean Margin	466
A. Late Permian–Early Liassic (≈ 260 – 195 Ma)	466
B. Late Liassic to Early–Late Jurassic (≈ 195 – 145 Ma)	468
C. Kimmeridgian–Berriasian (≈ 145 – 130 Ma)	468
D. Early Cretaceous (≈ 130 – 108 Ma)	471
E. Albian–Campanian (≈ 108 – 80 Ma)	473
F. Late Campanian–Late Paleocene (≈ 80 – 53 Ma)	475
G. Latest Paleocene–Late Eocene (≈ 53 – 34 Ma)	477
III. Relationships between Tethyan and Andean Evolution	479
A. Preliminary Discussion	479
B. The Role of Tethys in Andean Evolution	481
IV. Conclusions	485
References	485

Chapter 6. Conclusions

Chapter 6A. The Tethys: An Ocean Broken by Seuil Lithospheriques

Bruno Vrielynck, Jean Dercourt, and Nicolas Cottreau

I. Introduction	495
II. Constriction Zones in the Tethys	496
A. Indonesian–Australian Domain	496

B. Caribbean Domain	498
C. Mediterranean Domain	498
III. Seuil Lithosphérique Definition	501
IV. Influence of Seuils Lithosphériques on Oceanic Dynamics	502
V. Geological Processes on the Seuils Lithosphériques	505
A. Sedimentation during Rifting Phases	505
B. Sedimentation during Collision Phases	506
C. Magmatism on Seuils Lithosphériques	507
D. Seuils Lithosphériques Tectonic Evolution	508
VI. Conclusions	509
<i>References</i>	510
Index	513
