Acknowledgments for figures	xix
Table of mineral abbreviations	xxi
Table of units and symbols	xxii

CHAPTER 1

AN INTRODUCTION TO METAMORPHISM AND METAMORPHIC PROCESSES

The study of metamorphism as a key to crustal evolution	1
Metamorphic grade, metamorphic zones and metamorphic facies	2
Metamorphic P-T paths	2
Types of metamorphism	2
Classification based on the principal metamorphic agent	3
Classification based on geologic setting	3
Contact metamorphism	3
Regional contact metamorphism	3
Shock metamorphism	3
High strain metamorphism	3
Regional metamorphism	5
Burial metamorphism	5
Ocean-ridge metamorphism	5
Orogenic metamorphism	5
Classification based on plate tectonic setting	6
The variables of metamorphism	6
Temperature	7
Lithostatic pressure	7
Deviatoric stress	9
Fluids	10
Fluid pressure	10
Fluid-rock interactions	10
Bulk composition	10
Concluding remark	12

CHAPTER 2

THE METAMORPHIC FACIES

Progressive metamorphism	13
The metamorphic facies concept	14
Types of metamorphic facies	15
Metamorphic facies series	18
Plate tectonics and metamorphic facies series	18
Subduction zone polarity and paired metamorphic belts	22
Concluding remarks	24

CHAPTER 3

HEAT FLOW AND METAMORPHISM

Fourrier's law and surface heat flow	25
Derivation of the heat flow equation	27
Heat conduction	27
Heat production	29
Radioactive decay	29
Metamorphic reactions.....	29
Heat of fusion.....	30
Shear heating	30
Heat advection.....	31
The heat flow equation.....	31
Dimensional analysis	32
Steady state geotherms.....	33
Model I: The one-layer crust.....	34
Model II: The multi-layer crust	38
Model III: Exponential distribution of heat producing elements.....	41
Significance of steady state geotherms	41
Time-dependent, analytical solution to the one-dimensional heat flow equation	42
Thermal models of cooling plutons.....	47
Folding of thermal surfaces	52
Thermal models of orogenic events.....	56
P-T paths of metamorphic rocks: General causes.....	56
Crustal perturbations.....	56
Peclet number.....	57
Relaxation of the perturbed geotherm	58
Uplift and erosion or tectonic thinning	59
Thermal models of orogenic events: General statements.....	59
Overthrust models.....	60
Homogeneous crustal thickening models.....	62
General implications of crustal thickening models	62
Peak metamorphic mineral assemblages	62
The metamorphic field gradient	64
$P_{\max}$ versus P at $T_{\max}$	66
Metamorphic field gradient versus instantaneous geotherms	66
Metamorphic field gradients for continental collision.....	66
Magma intrusion models	66
Complicating factors.....	67
Thermal modeling and metamorphic facies series.....	68
Concluding remarks	69
Suggested further reading	71

CHAPTER 4

CRYSTAL CHEMISTRY OF ROCK-FORMING MINERALS

Introduction.....	73
Coordination polyhedra	73
Crystallographic sites.....	74
Exchange vectors.....	75
Crystal chemistry of some common rock-forming silicates	79

SiO ₂ polymorphs.....	79
Feldspars.....	81
Biopyriboles.....	83
Pyroxene.....	86
Amphiboles.....	90
Orthoamphiboles.....	90
Fe-Mg clinoamphiboles.....	93
Calcic amphiboles.....	93
Sodic amphiboles.....	93
Chlorite and serpentine.....	98
Other silicates.....	98
Fe-Ti oxides.....	98
Spinel.....	98
Carbonates.....	98
Calculation of mineral formulae from chemical analyses.....	101
Estimation of Fe ³⁺ by stoichiometric normalization.....	103
Estimation of Fe ³⁺ in an amphibole.....	103
Suggested further reading.....	105

CHAPTER 5

COMPOSITION SPACE: GRAPHICAL AND ALGEBRAIC ANALYSIS

Representation of composition space.....	108
Barycentric coordinates.....	109
Units of quantity.....	110
Conservative and non-conservative components.....	113
The dimensions of composition space and the number of independent reactions in a chemical system.....	114
Transformation of coordinate axes.....	118
Projective analysis of composition space.....	126
Condensed versus projected composition space.....	127
ACF and AKF diagrams.....	129
The AFM diagram.....	130
Concluding remarks.....	131
Suggested further reading.....	131

CHAPTER 6

HOMOGENEOUS PHASE EQUILIBRIA

Definitions.....	133
System.....	133
Species.....	135
Phase.....	135
Component.....	135
State variables.....	135
States of the system.....	136
Fundamental relations: The first and second laws of thermodynamics.....	136
Chemical changes and the chemical potential.....	138
Integration of the fundamental equation and the Gibbs-Duhem equation.....	138
Legendre transforms and the functions H (enthalpy), F (Helmholtz free energy) and G (Gibbs free energy).....	139

Formal mathematical relationships	142
The Maxwell relations	144
Heat capacity, thermal expansion and isothermal compressibility	146
Calculation of thermodynamic functions at elevated temperatures and pressures	147
Standard states and the definition of activity	152
Solids (minerals) and silicate melts	152
Fluids	152
Aqueous solutions (the solvent)	153
Aqueous solutions (the solute)	153
Thermodynamics of mixtures: General considerations	153
G-X diagrams	157
Conditions of homogeneous equilibrium	163
The equilibrium constant	169
The number of independent chemical reactions	170
Concluding remarks	173
Suggested further reading	173

CHAPTER 7

ACTIVITY MODELS FOR PHASES OF PETROLOGIC IMPORTANCE

Ideal solutions: The entropy of mixing	176
Ideal activity models for crystalline solutions	178
Molecular models	178
Ionic models	178
Mixing on one site only	179
Mixing on several sites	183
Ideal ionic solution models with local charge balance	186
Ideal ionic models with local charge balance and Al-avoidance	186
An example using pyroxene	186
An example using plagioclase	188
Nonideal activity models for crystalline ionic solutions	191
Henry's law	191
Intrasite nonideal mixing models	193
Symmetrical solution model	194
G-X relations for symmetric solution models	198
Asymmetrical solution model	201
Generalized 1-site asymmetric Margules expansion	204
Intrasite mixing models for multi-site crystals	205
Reciprocal solid solutions	205
Activity models for metamorphic fluids	217
Equations of state for metamorphic fluids	218
The ideal gas law	218
The van der Waals equation	218
The Redlich-Kwong equation of state	219
Modified Redlich-Kwong equation	219
Hard-sphere modified Redlich-Kwong equation (HSMRK)	219
Kerrick and Jacobs model	220
Virial equation	220
The Haar equation	220
Calculation of thermodynamic properties from equations of state	221
Nonideal mixing of real gases	225
Polynomial fits to thermodynamic properties of gases	227

P-V-T-a relations of C-O-H metamorphic fluids	228
Activity models for aqueous electrolytes	231
Units	231
Standard state	231
Activity models	235
Ideal solution model	235
Debye-Hückel law	235

CHAPTER 8

HETEROGENEOUS PHASE EQUILIBRIA

Conditions of heterogeneous equilibrium	241
The equilibrium constant	244
The Gibbs phase rule	244
Duhem's theorem	246
1-component systems	247
Application of the phase rule	251
Metastable extensions and Schreinemakers' rules	252
Petrogenetic grids	254
2-component systems	256
The method of tangents	257
T-X and P-X phase diagrams for binary systems	258
Two phases of fixed composition	260
One phase of fixed composition and one phase of variable composition	260
Two phases of variable composition	263
A phase that displays a solvus	266
Heterogeneous reactions in binary systems	266
G-X diagrams and petrogenetic grids for binary systems	271
Degeneracies	280
Other binary invariant points	283
3-component systems	283
Heterogeneous reactions in ternary systems	283
Invariant points in ternary systems	285
4-component systems	285
Systems with more than four components	288
Concluding remark	288
Suggested further reading	288

CHAPTER 9

PHASE RELATIONS IN THE SYSTEM SiO₂-Al₂O₃-CaO-Na₂O-K₂O-H₂O (CKNASH): MODEL SYSTEMS FOR PELITES, QUARTZO-FELDSPATHIC GNEISSES AND ANATEXIS

The system SiO ₂ -Al ₂ O ₃ -Na ₂ O-K ₂ O-H ₂ O (KNASH)	289
Composition space	290
Al ₂ SiO ₅ equilibria	292
Dehydration equilibria	293

Albite stability	297
Critical curves for solvi	297
Petrogenetic grid for the system KNASH.....	297
Continuous reactions	298
T-X relations.....	300
Melting relations.....	304
Petrogenetic grid for melting relations.....	306
The system $\text{SiO}_2\text{-Al}_2\text{O}_3\text{-CaO-Na}_2\text{O-H}_2\text{O}$ (CNASH)	309
Melting relations in the CNASH system	316
The system $\text{SiO}_2\text{-Al}_2\text{O}_3\text{-CaO-Na}_2\text{O-K}_2\text{O-H}_2\text{O}$ (CKNASH)	316
Melting relations in the CKNASH system	319
The effect of $\text{P}_{\text{H}_2\text{O}}$	322
Anatexis of felsic rocks	326
Other complicating factors.....	327
Four hypothetical P-T paths.....	327
Concluding remarks	336
Suggested further reading	336

CHAPTER 10

THE METAMORPHISM OF PELITES

Chemical system and graphical representations	337
Review of petrogenetic grids for pelites	340
The Spear and Cheney (1989) grid	341
The progressive metamorphism of pelites at intermediate pressure.....	341
The chlorite zone	341
The biotite isograd.....	345
Chloritoid-in reaction	349
The biotite/chloritoid zones.....	351
The garnet isograd.....	352
Chloritoid-out reactions	354
The staurolite and kyanite isograds in low-Al pelites.....	356
The sillimanite isograd.....	356
The demise of staurolite.....	357
The breakdown of muscovite	357
The appearance of cordierite.....	358
Orthopyroxene isograd	358
The progressive metamorphism of pelites at low pressure	358
High pressure metamorphism of pelites.....	362
Melting reactions	366
Continuous reactions, metamorphic fractional crystallization and mineral zoning in the metamorphism of pelites.....	369
P-T paths and the evolution of pelitic schists.....	374
Mineral growth and fabric development.....	382
Pelite phase relations in the granulite facies: Ultra high temperature metamorphism	382
The system $\text{SiO}_2\text{-Al}_2\text{O}_3\text{-MgO-FeO}$ (FMAS).....	383
The system $\text{SiO}_2\text{-Al}_2\text{O}_3\text{-MgO-FeO-K}_2\text{O}$ (KFMAS)	384
P-T paths and reaction textures.....	387
Occurrences of ultra high grade metamorphic rocks	390
Concluding remarks	390
Suggested further reading	391

CHAPTER 11

THE METAMORPHISM OF MAFIC ROCKS

The chemical system and graphical representations.....	393
The ACF diagram	394
The ACFN diagram.....	395
The ACFM diagram.....	395
The AFM diagram.....	395
The zeolite facies	397
The system $\text{SiO}_2\text{-Al}_2\text{O}_3\text{-Na}_2\text{O-H}_2\text{O}$	397
The system $\text{SiO}_2\text{-Al}_2\text{O}_3\text{-CaO-H}_2\text{O}$	399
Textures of zeolite facies rocks.....	401
The prehnite-pumpellyite facies.....	402
Zeolite to prehnite-pumpellyite facies transition.....	402
The greenschist facies.....	402
Greenschist-amphibolite facies transition.....	404
Plagioclase changes composition from albite to oligoclase	405
Amphibole changes composition from actinolite to hornblende.....	406
Chlorite becomes increasingly Mg-rich and eventually disappears	407
Epidote decreases in abundance and eventually disappears.....	407
Experimental studies of the greenschist to amphibolite facies transition	408
Phase diagrams for the greenschist to amphibolite facies transition	411
Amphibolite and epidote amphibolite facies	415
Amphibolite to granulite facies transition	415
Representations on the ACFN, ACF and ACN diagrams: Mg-rich rocks	417
Representations on the ACFN, ACF and ACN diagrams: Fe-rich rocks	419
The ACFM diagram.....	421
Experimental studies on the amphibolite to granulite facies transition.....	424
The appearance of metabasites in the granulite facies	425
Amphiboles and pyroxenes of the blueschist and eclogite facies.....	427
The blueschist facies	428
The prehnite-pumpellyite to blueschist facies transition	429
The greenschist to blueschist facies transition	429
Progressive changes in the blueschist facies.....	432
Textures of metabasites in the blueschist facies.....	434
Eclogite facies	434
Eclogite to granulite facies transition	434
Textures of metabasites in the eclogite facies	439
The compositional variation of amphibole with metamorphic grade.....	439
Controls on the chemistry of amphiboles	441
Summary P-T diagram for metamorphic facies.....	444
Suggested further reading	446

CHAPTER 12

THE METAMORPHISM OF SILICEOUS DOLOMITES (CALC-SILICATES)

T-X _{CO2} diagrams	447
The system CaO-MgO-SiO ₂ -H ₂ O-CO ₂	451
Metamorphism at constant fluid composition	455
Metamorphism driven by infiltration	456
Metamorphism in a closed system	457
Buffering of fluid composition by mineral reactions	464
Infiltration driven metamorphism	465
Concluding remarks	466
Suggested further reading	467

CHAPTER 13

METAMORPHISM OF ULTRAMAFIC AND CORDIERITE-ANTHOPHYLLITE ROCKS

Metamorphism of ultramafic rocks	469
Phase equilibria in the systems SiO ₂ -MgO-H ₂ O and SiO ₂ -MgO-CaO- H ₂ O	469
The system SiO ₂ -MgO-CO ₂	477
Concluding remarks	478
Metamorphism of cordierite-anthophyllite rocks	478
The origin of cordierite-anthophyllite rocks	478
Chemography of cordierite-anthophyllite rocks	479
Petrogenetic grid for cordierite-anthophyllite rocks	481
Orthoamphibole + Al ₂ SiO ₅ assemblage	484
Cordierite + cummingtonite	484
Cordierite + staurolite and cordierite + garnet	484
Orthoamphibole + hornblende assemblages	487
Concluding remarks	489
Suggested further reading	489

CHAPTER 14

OXIDES AND SULFIDES IN REGIONAL METAMORPHISM

Fe-Ti oxide minerals	491
Fe-Ti oxides as oxygen barometers	492
Fe-Ti oxide thermometry	496
Fe-Ti oxides and silicate minerals	499
The addition of TiO ₂	499
The addition of ferric iron (Fe ₂ O ₃)	501
Fe-Ti oxide-silicate phase relations	502
Graphite-silicate phase relations	503
Sulfide-silicate phase relations	506
Oxides and sulfides in progressive metamorphism	506
Concluding remarks	509
Suggested further reading	509

CHAPTER 15

THE CALCULATION OF METAMORPHIC PHASE EQUILIBRIA I: GEOTHERMOMETRY AND GEOBAROMETRY

General methods	511
The temperature and pressure dependence of the equilibrium constant.....	512
Geothermometry and geobarometry.....	516
Exchange reactions: The garnet-biotite Fe-Mg exchange thermometer.....	516
Net transfer reactions: The GASP geobarometer	525
Choosing a geothermobarometer	527
Survey of geothermometers and geobarometers	527
Thermobarometry on samples from Mt. Moosilauke	528
Internally consistent thermobarometers.....	531
Thermobarometry on granulite facies rocks	533
Garnet-clinopyroxene thermometry.....	534
Garnet-plagioclase-clinopyroxene-quartz barometry.....	534
Internally consistent thermometers and barometers.....	535
Precision and accuracy in geothermobarometry.....	537
Errors in ΔP	540
Calculation of P-T paths from thermobarometry on inclusion suites	540
An example from the Wopmay Orogen.....	541
Concluding remarks	542
Suggested further reading	545

CHAPTER 16

THE CALCULATION OF METAMORPHIC PHASE EQUILIBRIA II: P-T-X-M PHASE RELATIONS

Equilibrium relations.....	547
The equilibrium thermodynamic constraint.....	547
The stoichiometric constraint.....	548
Mass balance constraint.....	548
Types of problems that can be solved.....	549
Procedure for the theoretical analysis of phase equilibria.....	550
Example 1: The assemblage kyanite + sillimanite + quartz.....	550
Example 2: Pyroxene + olivine + quartz.....	552
Example 3: A typical greenschist facies assemblage.....	554
The KFMASH system.....	554
Degrees of freedom in an open system	557
Methods of solution.....	557
Newton-Raphson method.....	558
Total derivatives of the equilibrium, stoichiometric and mass balance constraints.....	559
The total derivative of the equilibrium condition.....	559
The total differential of the stoichiometric constraint.....	561
The total differential of the mass balance constraint.....	561
Taylor series expansions for the equilibrium, stoichiometric and mass constraint.....	561
Solution to the equilibrium problem using the Newton-Raphson method.....	561

Differential thermodynamics	563
Solution of the system of equations: Jacobian transformations.....	564
T-P-X-M phase relations: An example using the assemblage pyroxene + olivine + quartz in the system $\text{SiO}_2\text{-MgO-FeO}$	567
T-P-X contours for the assemblage pyroxene + olivine + quartz in the system $\text{SiO}_2\text{-MgO-FeO}$: Intensive variables only.....	568
T-P-X-contours for the assemblage pyroxene + olivine + quartz in the system $\text{SiO}_2\text{-MgO-FeO}$: Intensive and extensive variables	571
Concluding remarks	573
Suggested further reading	574

CHAPTER 17

THE ORIGIN AND INTERPRETATION OF ZONED METAMORPHIC MINERALS

Characterization of chemically zoned crystals	576
Origins of chemical zoning in garnet.....	578
Growth zonation	582
P-T-X-M phase relations and garnet growth zoning	583
The KFMASH system.....	583
The MnNCKFMASH system.....	589
Fractional crystallization models.....	593
Forward models of garnet growth.....	595
Change in mineral assemblage.....	600
Special problems of garnet- plagioclase equilibria: Implications for geobarometry	602
Kinetic effects on growth zonation	603
Infiltration and the effect on growth zonation.....	605
Ostwald ripening	605
Sector zoning	606
Diffusion zoning	607
Theory of diffusion	607
Diffusion coefficients.....	611
Solutions to the diffusion equation	612
The characteristic length scale for diffusion.....	612
Diffusion during cooling of high grade rocks.....	613
The importance of diffusion to the interpretation of geothermometry in high grade rocks.....	614
Exchange reactions only.....	618
Net transfer and exchange reactions	620
Discussion	622
Diffusion and growth in low grade garnets	622
The effect of diffusion on growth zoning profiles.....	622
Garnet zone model	623
Staurolite zone model.....	623
Discussion	625
The effects of diffusion on P-T path calculations.....	626
Internal metasomatism.....	626
P-T paths from garnet zoning	629
A hypothetical example	630
Assumptions of the method	632
An example from western New Hampshire, U.S.A.	633

An example from the Tauern Window, Austria.....	635
Concluding remarks	636
Trace element zoning.....	636
Tauern Window, Austria	636
Kwoiek Area, British Columbia	638
Concluding remarks	639
Suggested further reading	639

CHAPTER 18

THE DETERMINATION OF FLUID COMPOSITION FROM MINERAL-FLUID EQUILIBRIA AND FLUID INCLUSIONS

The system O-H	
Oxygen fugacity buffers in experimental petrology.....	647
The stability of iron-bearing minerals as a function of f_{O_2}	648
The C-O-H system: Equilibrium with graphite.....	650
Dehydration reactions in a graphite-bearing rock.....	655
Fluid mixing	657
The C-O-H-S system: Equilibrium with graphite, pyrite and pyrrhotite.....	658
Mineral solubilities.....	660
Quartz solubility.....	661
Corundum solubility.....	662
Other minerals	663
Calculation of aqueous fluid composition.....	663
The system $MgO-CaO-SiO_2-H_2O-HCl$	664
Constraints on metamorphic fluid composition from studies of fluid inclusions.....	665
The appearance of fluid inclusions.....	666
Fluid inclusions as geothermometers and geobarometers	667
Compositions of fluid inclusions	669
Concluding remarks	670
Suggested further reading	670

CHAPTER 19

THE FLOW OF FLUIDS DURING METAMORPHISM

Intensive versus extensive variables.....	673
Evidence for fluid flow during metamorphism.....	677
Veins as indicators of fluid flow	677
Reaction progress as a monitor of fluid flow.....	678
Stable isotope evidence for fluid flow	681
Trace element zoning.....	685
Major element metasomatism	687
Problems with fluid-rock ratios.....	687
Flow through porous media.....	687
The nature of porosity.....	688
Wetting angles and porosity.....	689
Darcy's law	692
Permeability	692
Pressure gradients.....	693

Darcy flow through metamorphic rocks.....	697
Calculation of fluid fluxes from petrographic data	699
Other applications of the transport equation.....	703
Thermal effects of fluid flow	703
Models for fluid flow in the crust	704
Crustal convection or single pass fluid flow?.....	705
Concluding remarks	708
Suggested further reading	708

CHAPTER 20

TEMPERATURE-TIME HISTORIES: RADIOGENIC ISOTOPES IN METAMORPHISM

Isotope geochronology: Basic concepts	711
Derivation of the age equation.....	711
The K-Ar method of dating.....	713
Diffusion and the loss of daughter product.....	714
Closure temperature.....	717
The $^{40}\text{Ar}/^{39}\text{Ar}$ method of age dating.....	720
The $^{40}\text{Ar}/^{39}\text{Ar}$ incremental heating technique.....	721
U-Pb geochronology	723
Geochronology using garnet.....	727
Fission tracks.....	728
Thermochronology	729
Examples of temperature-time histories.....	731
Concluding remarks	735
Suggested further reading	735

CHAPTER 21

METAMORPHIC P-T PATHS AND TECTONIC EVOLUTION: EXAMPLES

Subduction zone metamorphism.....	737
Continental collision metamorphism	741
Tauern Window, Austria	741
The Himalayan metamorphic belt.....	745
The Acadian orogeny in central New England, U.S.A.	750
Metamorphic core complexes	754
Granulite facies metamorphism.....	760
Dehydration of amphibolite to granulite.....	760
Granulite P-T paths	760
Concluding remarks	766
Suggested further reading	766

REFERENCES	767
------------------	-----

INDEX.....	791
