

Table of Contents

Introduction	V
1. Basic Equation with Constant Coefficients	1
1.1 Introduction	1
1.2 Green's Function for $M(\partial_t)$ on $\mathbb{R}$	2
1.3 Necessary and Sufficient Condition for Solvability	4
1.4 Necessary and Sufficient Condition for Power-Exponential Asymptotics	8
1.5 A Larger Class of Ordinary Differential Equations	12
2. The Operator $M(\partial_t)$ on a Semiaxis and an Interval	15
2.1 Introduction	15
2.2 Properties of Green's Function	15
2.3 Unique Solvability of the Boundary Value Problem on a Semi- axis	17
2.4 Asymptotics at Infinity	18
2.5 Unique Solvability of the Boundary Value Problem on a Finite Interval	20
2.6 Positivity of Poisson's Functions	21
2.7 Green's Function for the Boundary Value Problem on an In- terval	21
2.8 Positivity of Green's Function	23
3. The Operator $M(\partial_t) - \omega_0$ with Constant ω_0	25
3.1 Introduction	25
3.2 Roots of the Characteristic Equation	26
3.3 Green's Function for $M(\partial_t) - \omega_0$ on $\mathbb{R}$	28
3.4 Uniqueness and Solvability	31
3.5 Stable Estimate	34
4. Green's Function for the Operator $M(\partial_t) - \omega(t)$	37
4.1 Properties of Green's Function	37
4.2 Monotonicity Properties of Green's Function with Respect to ω	39

4.3	Multiplicative Estimate for Green's Function and its Derivative	
4.4	Other Estimates for Green's Function	43
5.	Uniqueness and Solvability Properties of the Operator $M(\partial_t) - \omega(t)$	
5.1	Introduction	47
5.2	Existence Theorem and Properties of Solutions	48
5.3	The Equation on a Bounded Interval	52
5.4	Uniqueness	55
5.5	Some Corollaries of the Uniqueness Theorem	61
5.6	The Boundary value Problem on a Semiaxis	63
5.7	Representation for g_ω	67
5.8	Properties of g_ω and Uniqueness Theorem when $m_+ = 1$ or $m_- = 1$	72
5.9	The Space $X_+(\omega)$ for $m_+ = 2$	73
5.10	Green's Function and Uniqueness Theorem when $m_+ = 2$	77
5.11	The Space $X_-(\omega)$ for $m_- = 2$	78
6.	Properties of $M(\partial_t) - \omega(t)$ under Various Assumptions about $\omega(t)$	81
6.1	Introduction	81
6.2	The Case of Bounded Coefficient ω	84
6.3	The Case of Summable ω	86
6.4	The Case $m_+ = m_- = 1$	90
6.5	Uniqueness and Solvability in the Case $m_+ = m_- = 1$	93
6.6	Power Perturbation (Estimates for g_ω in the Case $\alpha < m_+$)	94
6.7	Power Perturbation (Estimates for g_ω in the Case $\alpha = m_+$)	98
6.8	Power Perturbation (Uniqueness and Solvability)	100
6.9	Estimates for g_ω when ω 'Dominates' either t^{-m_+} or t^{-m_-} for Large Positive t	101
6.10	Uniqueness and Existence Theorems in the Case $(\omega^{-1/m_-})' \rightarrow 0$	110
7.	Asymptotics of Solutions at Infinity	111
7.1	Estimates for Green's Function g_ω under the Assumption of Weighted Summability of $\omega(t)$	111
7.1.1	Statement of the Result	111
7.1.2	Proof of Theorem 7.1.1	112
7.1.3	Remarks and Corollaries	116
7.2	Auxiliary Existence Assertions	118
7.3	Asymptotics of Solutions of the Homogeneous Equation	121
7.4	Necessary and Sufficient Condition for Asymptotics	124

A. Application to Ordinary Differential Equations with Operator Coefficients	127
A.1 Comparison Principle for Equations with Constant Operator Coefficients	127
A.2 Comparison Principle for Equations with Variable Operator Coefficients	130
A.3 Some Special Cases	132
A.3.1 The Case $m_+ = m_- = 1$	132
A.3.2 Power Perturbations	133
A.4 Power-exponential Asymptotics of Solutions to the Operator Equation with Variable Coefficients	134
References	137
