

Mediterranean Mountain Environments

Editor

Ioannis N. Vogiatzakis

Open University of Cyprus, Latsia, Cyprus

This book provides an introduction to the environments of mountainous areas in the Mediterranean and their changes in time and space in relation to both natural and cultural factors.

Mediterranean Mountain Environments places its emphasis on physical geography while adopting an integrated approach to the whole subject area. The book draws examples from a wide range of environments, demonstrating the interaction between human and physical processes responsible for shaping mountain areas. Risks and conflicts, as well as methods and tools for the conservation and management of both the natural and cultural environment are covered in the light of future challenges for the sustainable development of the Mediterranean mountains.

- Emphasis on both mainland and island mountain ranges
- Combines natural and cultural approach in the topic
- Integrated approach: facing future challenges based on the study and understanding of the historical processes that have shaped the Mediterranean mountains
- Key references at the end of each chapter
