

Table of Contents

***Introduction* 1**

About This Book.....	1
Conventions Used in This Book.....	2
What You're Not to Read.....	2
Foolish Assumptions.....	2
How This Book Is Organized.....	3
Part I: Studying the Earth.....	3
Part II: Elements, Minerals, and Rocks.....	3
Part III: One Theory to Explain It All: Plate Tectonics.....	3
Part IV: Superficially Speaking: About Surface Processes.....	4
Part V: Long, Long Ago in This Galaxy Right Here.....	4
Part VI: The Part of Tens.....	4
Icons Used in This Book.....	4
Where to Go from Here.....	5

***Part I: Studying the Earth* 7**

Chapter 1: Rocks for Jocks (and Everybody Else) 9

Finding Your Inner Scientist.....	9
Making observations every day.....	10
Jumping to conclusions.....	10
Focusing on Rock Formation and Transformation.....	10
Understanding how rocks form.....	11
Tumbling through the rock cycle.....	11
Mapping Continental Movements.....	11
Unifying geology with plate tectonics theory.....	12
Debating a mechanism for plate movements.....	13
Moving Rocks Around on Earth's Surface.....	13
Interpreting a Long History of Life on Earth.....	14
Using relative versus absolute dating.....	14
Witnessing evolution in the fossil record.....	15

Chapter 2: Observing Earth through a Scientific Lens..... 17

Realizing That Science Is Not Just for Scientists.....	17
Using a Methodical Approach: The Scientific Method.....	18
Sensing something new.....	19
I have a hypothesis!.....	19
Testing your hypothesis: Experiments.....	20

Crunching the numbers	21
Interpreting results	23
Sharing the findings	23
The End-All, Be-All: A Scientific Theory	23
It's never "just a theory"	24
Scientific theory versus scientific law	24
The road to paradigms	25
Speaking in Tongues: Why Geologists Seem to Speak a Separate Language	25
Lamination vs. foliation: Similar outcomes from different processes	25
Gabbro vs. basalt: Different outcomes from similar processes	26

Chapter 3: From Here to Eternity: The Past, Present, and Future of Geologic Thought. 27

Catastrophe Strikes Again and Again	28
Early Thoughts on the Origin of Rocks	28
Developing Modern Geologic Understanding	29
Reading the rock layers: Steno's stratigraphy	29
These things take time! Hutton's hypothesis	30
What has been will be: Lyell's principles	31
Uniformi-what? Understanding the Earth through Uniformitarianism	31
Pulling It All Together: The Theory of Plate Tectonics	32
Forging Ahead into New Frontiers	33
Asking how, where, and why: Mountain building and plate boundaries	33
Mysteries of the past: Snowball earth, first life, and mass extinctions	33
Predicting the future: Earthquakes and climate change	35
Out of this world: Planetary geology and the search for life	36

Chapter 4: Home Sweet Home: Planet Earth. 37

Earth's Spheres	37
Examining Earth's Geosphere	39
Defining earth's layers	39
Examining each layer	41

Part 11: Elements, Minerals, and Rocks..... 45

Chapter 5: It's Elemental, My Dear: A Very Basic Chemistry of Elements and Compounds 47

The Smallest Matter: Atoms and Atomic Structure	47
Getting comfortable with the periodic table	48
Interpreting isotopes	51
Charging particles: Ions	51

Chemical Bondage for Beginners	52
Donating electrons (ionic bonds)	52
Sharing electrons (covalent bonds)	54
Migrating electrons (metallic bonds)	54
Formulating Compounds	55
Chapter 6: Minerals: The Building Blocks of Rocks	57
Meeting Mineral Requirements	58
Making Crystals	58
Identifying Minerals Using Physical Characteristics	59
Observing transparency, color, luster, and streak	59
Measuring mineral strength	60
If it tastes like salt, it must be halite: Noting unique mineral properties	64
Measuring properties in the lab	65
Realizing Most Rocks Are Built from Silicate Minerals	65
Finding silicates in many shapes	67
Grouping silicate minerals	70
Remembering the Nonsilicate Minerals	70
Carbonates	70
Sulfides and sulfates	71
Oxides	71
Native elements	72
Evaporites	72
Gemstones	73
Chapter 7: Recognizing Rocks: Igneous, Sedimentary, and Metamorphic Types	75
Crystallizing One Way or Another: Igneous Rocks	76
Classifying igneous rocks	76
Mama magma: Birthing igneous rocks	79
When magma becomes lava: Studying volcanoes	83
Seeing what lies beneath: Plutons	86
Merging Many Single Grains of Sand: Sedimentary Rocks	87
Weathering rocks into sediments	89
Settle down (and be compacted)!: Changing from sediment into rock	91
Sizing up the grains: Classifying sedimentary rocks	93
No grains at all: Chemical sedimentary rocks	94
Telling stories of the past: Sedimentary structures	96
Stuck between a Rock and a Hard Place: Metamorphic Rocks	98
And you thought you were stressed! Heat, pressure, and metamorphism	99
Grades of metamorphism and index minerals	100
Between the mineral sheets: Foliation, or maybe not	100
Categorizing metamorphic rocks	102
Moving through the Rock Cycle: How Rocks Change from One Type to Another	105

***Part III: One Theory to Explain It All: Plate Tectonics*..... 107**

Chapter 8: Adding Up the Evidence for Plate Tectonics.....109

Drifting Apart: Wegener's Idea of Continental Drift	110
Continental puzzle solving.....	110
Fossil matching	112
Stratigraphic stories	112
Icy cold climates of long ago	114
Meeting at the equator	115
Searching for a mechanism	115
Coming Together: How Technology Sheds Light on Plate Tectonics...	116
Sea-floor mapping, or "How WWII advanced tectonic theory"	116
Flip-flopping magnetic poles: Paleomagnetism and seafloor spreading	116
Measuring plate movements	118
Unifying the theory	119

Chapter 9: When Crustal Plates Meet, It's All Relative.....121

Density Is Key.....	121
Two of a Kind: Continental and Oceanic Crust.....	122
Dark and dense: Oceanic crust	123
Thick and fluffy: Continental crust	123
Understanding Why Density Matters: Isostasy.....	123
Defining Plate Boundaries by Their Relative Motion	125
Driving apart: Divergent plate boundaries	126
Crashing together: Convergent plate boundaries	128
Slip-sliding along: Transform plate boundaries	131
Shaping Topography with Plate Movements	132
Deforming the crust at plate boundaries.....	132
Compressing rocks into folds.....	133
Faulting in response to stress	135
Building mountains.....	137

Chapter 10: Who's Driving This Thing? Mantle Convection and Plate Movement139

Running in Circles: Models of Mantle Convection	140
Mantle plumes: Just like the lava in your lamp.....	142
Tug of war: The slab-pull versus ridge-push model	142
Using Convection to Explain Magma, Volcanoes, and Underwater Mountains	143
Plate friction: Melting rock beneath the earth's crust	143
Creating volcanic arcs and hotspots.....	144
Birthing new seafloor at mid-ocean ridges	147

Shake, Rattle, and Roll: How Plate Movements Cause Earthquakes	148
Responding elastically	148
Sending waves through the earth	149
Measuring magnitude	150

***Part IV: Superficially Speaking: About Surface Processes* 153**

Chapter 11: Gravity Takes Its Toll: Mass Wasting 155

Holding Steady or Falling Down: Friction versus Gravity	156
Focusing on the Materials Involved	157
Loose materials: Resting at the angle of repose	157
Bedrock: Losing its stability	158
Triggering Mass Movements	158
Adding water to the mix	158
Changing the slope angle	159
Shaking things up: Earthquakes and volcanoes	160
Removing vegetation	160
Moving Massive Amounts of Earth, Quickly	160
Falls	161
Slides and slumps	161
Flows	162
A More Subtle Approach: Creep and Soil Flow (Solifluction)	163

Chapter 12: Water: Above and Below Ground 165

Hydrologic Cycling	165
Driving the cycle with evaporation	166
Traveling across a continent	167
Streams: Moving Sediments toward the Ocean	168
Draining the basin	168
Two types of flow	169
Measuring stream characteristics	170
Carrying a heavy load	170
Measuring what is transported	171
Eroding a Stream Channel to Base Level	172
Seeking Equilibrium after Changes in Base Level	173
Leaving Their Mark: How Streams Create Landforms	174
Draining the basin	174
Meandering along	175
Depositing sediments along the way	177
Reaching the sea	178
Flowing Beneath Your Feet: Groundwater	178
Infiltrating tiny spaces underground	178
Measuring porosity and permeability	179

Setting the water table	180
Springing from rocks	181
That sinking feeling: Karst, caves, and sinkholes	182
Chapter 13: Flowing Slowly toward the Sea: Glaciers	185
Identifying Three Types of Glaciers	185
Understanding Ice as a Geologic Force.....	186
Transforming snow into ice.....	186
Balancing the glacial budget	187
Flowing solidly down the mountain	188
Eroding at a Snail's Pace: Landforms Created by Glacial Erosion	189
Plucking and abrading along the way	189
Creating their own valleys	190
Speaking French: Cirques, arêtes, et roche moutonnées	190
Leaving It All Behind: Glacial Deposits	192
Depositing the till.....	192
Plains, trains, eskers, and kames	193
Behaving erratically: Large boulders in odd places.....	195
Where Have All the Glaciers Gone?.....	195
Filling the erosional gaps	195
Cycling through ice ages.....	196
Rebounding isostatically.....	198
Chapter 14: Blowing in the Wind: Moving Sediments without Water	199
Lacking Water: Arid Regions of the Earth	199
Transporting Particles by Air	200
Skipping right along: Bed load and saltation.....	200
Suspending particles in air	202
Deflating and Abrading: Features of Wind Erosion	202
Removing sediments	202
Scratching the surface.....	203
Just Add Wind: Dunes and Other Depositional Wind Features	203
Migrating piles of sand: Dunes	204
Shaping sand	205
Laying down layers of loess	207
Paving the Desert: Deposition or Erosion?.....	208
Chapter 15: Catch a Wave: The Evolution of Shorelines	211
Breaking Free: Waves and Wave Motion	211
Dissecting wave anatomy	211
Starting to roll	212
Going with the flow: Currents and tides	214
Shaping Shorelines	216
Carving cliffs and other features.....	216
Budgeting to build sandbars	216
Categorizing Coastlines	218

Part V: Long, Long Ago in This Galaxy Right Here..... 221

Chapter 16: Getting a Grip on Geologic Time223

The Layer Cake of Time: Stratigraphy and Relative Dating	223
Speaking relatively.....	224
Sorting out the strata	224
Putting rock layers in the right order	225
Losing time in the layers.....	226
Show Me the Numbers: Methods of Absolute Dating	228
Measuring radioactive decay	228
Common radioactive isotopes for geological dating.....	232
Other exacting methods of geological dating	234
Relatively Absolute: Combining Methods for the Best Results	236
Eons, Eras, and Epochs (Oh My!): Structuring the Geologic Timescale.....	237

Chapter 17: A Record of Life in the Rocks241

Explaining Change, Not Origins: The Theory of Evolution.....	241
The Evolution of a Theory.....	242
Acquiring traits doesn't do it	242
Naturally, selecting for survival.....	243
Mendel's peas please.....	243
Genetic nuts and bolts	244
Spontaneously mutating genes	244
Speciating right and left.....	245
Putting Evolution to the Test.....	246
Against All Odds: The Fossilization of Lifeforms.....	246
Bones, teeth, and shell: Body fossils.....	247
Just passing through: Trace fossils	247
Correcting For Bias in the Fossil Record.....	249
Hypothesizing Relationships: Cladistics	249

Chapter 18: Time before Time Began: The Precambrian253

In the Beginning . . . Earth's Creation from a Nebulous Cloud	254
Addressing Archean Rocks	255
Creating continents	255
Revvng up the rock cycle.....	256
Feeling hot, hot, hot: Evidence for extreme temperatures.....	257
Originating with Orogens: Supercontinents of the Proterozoic Eon	258
Single Cells, Algal Mats, and the Early Atmosphere.....	259
Hunting early prokaryotes and eukaryotes.....	259
You know it as pond scum: Cyanobacteria	260
Waiting to inhale: The formation of earth's atmosphere.....	263

Chapter 19: Teeming with Life: The Paleozoic Era.267

Exploding with Life: The Cambrian Period.....	268
Toughen up! Developing shells	268
When roly polys ruled the world	269
Building Reefs All Over the Place	270
Eurypterids	271
Ammonoids and nautiloids.....	272
Spinal Tapping: Animals with Backbones	274
Fish evolve body armor, teeth, and . . . legs?	274
Part-time land dwellers: Amphibians venture out of the water... ..	276
Adapting to life on land: The reptiles	277
Planting Roots: Early Plant Evolution	278
Tracking the Geologic Events of the Paleozoic	279
Constructing continents	280
Reading the rocks: Transgressions and regressions.....	280
Fossilizing carbon fuels.....	284
Pangaea, the most super of supercontinents.....	284

**Chapter 20: It Should Have Been Called *Mesozoic Park*:
When Dinosaurs Dominated285**

Driving Pangaea Apart at the Seams	286
One continent becomes many.....	286
Influencing global climate.....	287
Creating the mountains of North America.....	288
Repopulating the Seas after Extinction.....	289
The Symbiosis of Flowers.....	290
Recognizing All the Mesozoic Reptiles	292
If it flies or swims, it's not really a dinosaur.....	292
Flocking together	294
Climbing the Dinosaur Family Tree.....	295
Ornithischian dinosaurs	295
Saurischian dinosaurs	297
Laying the Groundwork for Later Dominance:	
Early Mammal Evolution	298

Chapter 21: The Cenozoic Era: Mammals Take Over299

Putting Continents in Their Proper (Okay, Current) Places	299
Creating modern geography.....	300
Consuming the Farallon Plate	302
Carving the Grand Canyon with uplift.....	303
Icing over northern continents	303

Entering the Age of Mammals	304
Regulating body temperature	306
Filling every niche.....	306
Living Large: Massive Mammals Then and Now.....	307
Nosing around elephant evolution	308
Returning to the sea: Whales.....	310
Larger than life: Giant mammals of the ice ages	311
Right Here, Right Now: The Reign of Homo Sapiens	311

Chapter 22: And Then There Were None: Major Extinction

Events in Earth's History 315

Explaining Extinctions	316
Heads up! Astronomical impacts	316
Lava, lava everywhere: Volcanic eruptions and flood basalts.....	317
Shifting sea levels.....	319
Changing climate.....	319
End Times, at Least Five Times	319
Cooling tropical waters	320
Reducing carbon dioxide levels	320
The Great Dying	321
Paving the way for dinosaurs	322
Demolishing dinosaurs: The K/T boundary	322
Modern Extinctions and Biodiversity	324
Hunting the megafauna	324
Reducing biodiversity	325

Part VI: The Part of Tens 327

Chapter 23: Ten (Plus) Ways Humans Act as Geologic Agents 329

Damming Rivers	329
Shaping Waterways	330
Nourishing Beaches	330
Changing Coastlines	331
Destabilizing Slopes	331
Fracking for Natural Gas	331
Removing Mountaintops.....	332
Developing Deserts	332
Creating Caverns	332
Transporting Earth Materials.....	333
Changing the Climate	333

Chapter 24: Ten Geologic Hazards335

Changing Course: River Flooding	335
Caving In: Sinkholes	336
Sliding Down: Landslides	336
Shaking Things Up: Earthquakes	336
Washing Away Coastal Towns: Tsunamis	337
Destroying Farmland and Coastal Bluffs: Erosion	338
Fiery Explosions of Molten Rock: Volcanic Eruptions	338
Melting Ice with Fire: Jokulhlaups	339
Flowing Rivers of Mud: Lahars	339
Watching the Poles: Geomagnetism	339

Index..... 341
