

CONTENTS

1	INTRODUCTION	5
2	OBJECTIVES.....	7
3	STATE OF THE ART.....	7
3.1	Wireless Network Based Positioning.....	7
3.1.1	<i>Problem Definition</i>	7
3.1.2	<i>Wireless Channel Model</i>	8
3.1.3	<i>Range Measurement Methods</i>	8
3.1.4	<i>Localization Algorithms</i>	9
3.2	Bayesian Filtering in Positioning.....	9
3.2.1	<i>The Particle Filter</i>	10
3.3	System Dynamics and Measurement Models	10
3.3.1	<i>Pedestrian Locomotion Model</i>	10
3.3.2	<i>Sensor Models</i>	11
4	PROPOSED SOLUTION.....	12
4.1	Pedestrian Dead Reckoning Tightly Fused with RSS Based Range Measurements	12
4.1.1	<i>Frames Definition</i>	12
4.1.2	<i>Proposed System Dynamics and Measurement Models</i>	13
4.1.3	<i>Fusion Filter</i>	14
4.2	Dual Wireless Channel Loss Mapping.....	15
4.3	Particle Filter Based Pedestrian Navigation Algorithm with Dual Wireless Channel Loss Mapping	17
5	EVALUATION	18
5.1	Evaluation Tools	18
5.1.1	<i>Reference Measurement Data Set for Multisensor Pedestrian Navigation with Accurate Ground Truth</i>	19
5.1.2	<i>1-Prop Environment</i>	19
5.2	Evaluation Definition.....	19
5.3	Results.....	19
6	CONCLUSIONS AND FUTURE WORK	22
6.1	Next Steps	23
