

Brigitte Markner-Jäger is a lecturer for English as a language for specific purposes. Since 2001 she has been teaching technical and business English for engineering sciences and business management studies at the University of Applied Sciences Georg Agricola in Bochum.

Technical English for Geosciences

The course book *Technical English for Geosciences* is a real gold mine for all – most especially students and lecturers – who need to enhance their command of the English language with the terminology of geosciences. Subjects from all branches and disciplines of geosciences are discussed: Applied Geology, Geotechnology/Geoengineering, Mineralogy, Hydrology, Mining and Rehabilitation, Meteorology, and Water and Waste Management – subjects which are closely related to Bachelor's or Master's degree studies.

Texts are taken from various authentic material including advertisement brochures, scientific monographs or internet sources. Terminology is practiced through multiple tasks and interesting exercises. The book is meant for learning in classes as well as for self-study. A glossary and proposals for solutions are provided at the end of the book.

Table of Contents

Unit 1	Applied Geology What a study course in the UK looks like	1
Unit 2	Geotechnology What is geotechnology?	6
Unit 3	Geotechnical Engineering Another engineering course	8
Unit 4	Geoengineering The role of geoengineers in construction	13
Unit 5	The Rock Cycle A model to describe the formation of different rock types	19
Unit 6	Rocks and Rock Mechanics General principles of rock mechanics	24
Unit 7	Plate Tectonics, Tectonics and Faultings Theories to describe the movement of the Earth	28
Unit 8	Earthquakes The intensity and magnitude of the shaking of the Earth	34
Unit 9	Volcanoes Local devastation by volcanic eruptions	40
Unit 10	Tsunamis The role of geologists to predict geohazards	49

Table of Contents

Unit 11	Soil Sciences and Soil Studies The composition of soils	55
Unit 12	Soil Testing Equipment I Soil compaction and bearing capacity	62
Unit 13	Soil Testing Equipment II Stress measurement methods	65
Unit 14	Mineralogy I What makes a mineral?	68
Unit 15	Mineralogy II Properties of minerals	73
Unit 16	Mineralogy III Diamond. The ultimate mineral	76
Unit 17	Minerals in Industry and Economy Why are minerals so important?	80
Unit 18	Tara Mines I. A Zinc and Lead Mine in Ireland Exploration and extraction of minerals	85
Unit 19	Tara Mines II Mining and production of minerals	90
Unit 20	Tara Mines III Processing of minerals	94
Unit 21	Minerals Recycling Resource conservation and economic considerations	97

Unit 22	Energy Sources I Non-renewable sources: the fossil fuels coal, oil and natural gas	101
Unit 23	Energy Sources II Geothermal Energy - Energy from the interior of the Earth	108
Unit 24	Energy Sources III Other renewable energy sources for power generation	113
Unit 25	Drilling Techniques From hand augers to rotary core barrel drills	115
Unit 26	Rehabilitation Restoration of landscape as a sustainable development	120
Unit 27	Hydrogeology Water as a source of life	125
Unit 28	The Water Cycle A model about the supply of water	129
Unit 29	The Groundwater System How geologists locate groundwater	134
Unit 30	Groundwater Modelling System A geoengineering groundwater software program	137
Unit 31	Water Quality Testing equipment	141
Unit 32	Waste Water Treatment How do waste water treatment plants work?	145

Table of Contents

Unit 33	Waste Disposal	150
	Waste management and geoengineering	
Unit 34	Meteorology and Climatology	156
	An introduction to weather and climate phenomena	
Unit 35	The Carbon Cycle	159
	The natural transfer of carbon dioxide	
Unit 36	Global Warming and Climate Change	162
	The human impact on the environment	
Unit 37	Global Response to Climate Change	168
	Statements and conclusions	
Unit 38	Glossary	174
	Creation of one's own geology glossary	
	Index	183
	Solution	187
	Selected Reference List	207
	Credits	209
