Preface to Second Edition	xv
Acknowledgments	xix
About the Authors	xxi
Flow Chart	xxiii

CHAPTER 1 Descriptive Statistics.....	1
1.1 Introduction	2
1.1.1 Data Collection	3
1.2 Basic Concepts	4
1.2.1 Types of Data	5
1.3 Sampling Schemes	8
1.3.1 Errors in Sample Data	12
1.3.2 Sample Size	12
1.4 Graphical Representation of Data	13
1.5 Numerical Description of Data	26
1.5.1 Numerical Measures for Grouped Data	30
1.5.2 Box Plots	33
1.6 Computers and Statistics	39
1.7 Chapter Summary	39
1.8 Computer Examples	41
1.8.1 R Introduction and Examples	41
1.8.2 Minitab Examples	44
1.8.3 SPSS Examples	46
1.8.4 SAS Examples	48
Projects for Chapter 1	51

CHAPTER 2 Basic Concepts from Probability Theory.....	53
2.1 Introduction	54
2.2 Random Events and Probability	55
2.3 Counting Techniques and Calculation of Probabilities	63
2.4 The Conditional Probability, Independence, and Bayes' Rule	70
2.5 Random Variables and Probability Distributions	82
2.6 Moments and Moment-Generating Functions	91
2.6.1 Skewness and Kurtosis	96
2.7 Chapter Summary	104
2.8 Computer Examples (Optional)	105
2.8.1 Examples Using R	105

2.8.2	Minitab Computations	106
2.8.2	SPSS Examples.....	107
2.8.3	SAS Examples	107
	Projects for Chapter 2.....	108
CHAPTER 3	Additional Topics in Probability.....	111
3.1	Introduction	112
3.2	Special Distribution Functions.....	112
3.2.1	The Binomial Probability Distribution	113
3.2.2	Poisson Probability Distribution	117
3.2.3	Uniform Probability Distribution	120
3.2.4	Normal Probability Distribution.....	122
3.2.5	Gamma Probability Distribution	129
3.3	Joint Probability Distributions	139
3.3.1	Covariance and Correlation.....	147
3.4	Functions of Random Variables.....	152
3.4.1	Method of Distribution Functions	152
3.4.2	The pdf of $Y = g(X)$, Where g is Differentiable and Monotone Increasing or Decreasing	154
3.4.3	Probability Integral Transformation.....	154
3.4.4	Functions of Several Random Variables: Method of Distribution Functions	155
3.4.5	Transformation Method.....	155
3.5	Limit Theorems	159
3.6	Chapter Summary	168
3.7	Computer Examples (Optional)	170
3.7.1	The R-Examples	170
3.7.2	Minitab Examples.....	171
3.7.2	SPSS Examples.....	173
3.7.3	SAS Examples	173
	Projects for Chapter 3.....	175
CHAPTER 4	Sampling Distributions	177
4.1	Introduction	178
4.1.1	Finite Population.....	181
4.2	Sampling Distributions Associated with Normal Populations ..	184
4.2.1	Chi-Square Distribution.....	186
4.2.2	Student t -Distribution	191
4.2.3	F -Distribution	195
4.3	Order Statistics	200

4.4	Large Sample Approximations	205
4.4.1	The Normal Approximation to the Binomial Distribution	206
4.5	Chapter Summary	210
4.6	Computer Examples	211
4.6.1	Examples Using R	211
4.6.2	Minitab Examples	213
4.6.3	SPSS Examples	214
4.6.4	SAS Examples	214
	Projects for Chapter 4	215
CHAPTER 5	Statistical Estimation	219
5.1	Introduction	220
5.2	The Methods of Finding Point Estimators	221
5.2.1	The Method of Moments	222
5.2.2	The Method of Maximum Likelihood	227
	Some Additional Probability Distributions	234
5.3	Some Desirable Properties of Point Estimators	245
5.3.1	Unbiased Estimators	245
5.3.2	Sufficiency	250
5.4	A Method of Finding the Confidence Interval: Pivotal Method	261
5.5	One Sample Confidence Intervals	269
5.5.1	Large Sample Confidence Intervals	269
5.5.2	Confidence Interval for Proportion, p	272
5.5.3	Small Sample Confidence Intervals for μ	275
5.6	A Confidence Interval for the Population Variance	284
5.7	Confidence Interval Concerning Two Population Parameters	289
5.8	Chapter Summary	298
5.9	Computer Examples	299
5.9.1	Examples Using R	299
5.9.2	Minitab Examples	301
5.9.3	SPSS Examples	302
5.9.4	SAS Examples	303
	Projects for Chapter 5	303
CHAPTER 6	Hypothesis Testing	311
6.1	Introduction	312
6.1.1	Sample Size	320
6.2	The Neyman-Pearson Lemma	323

6.3	Likelihood Ratio Tests	328
6.4	Hypotheses for a Single Parameter	333
6.4.1	The p -Value	333
6.4.2	Hypothesis Testing for a Single Parameter	336
6.5	Testing of Hypotheses for Two Samples	345
6.5.1	Independent Samples	345
6.5.2	Dependent Samples	353
6.6	Chapter Summary	359
6.7	Computer Examples	360
6.7.1	R-Examples	360
6.7.2	Minitab Examples	363
6.7.3	SPSS Examples	365
6.7.4	SAS Examples	366
	Projects for Chapter 6	368
CHAPTER 7	Goodness-of-Fit Tests Applications	371
7.1	Introduction	372
7.2	The Chi-Square Tests for Count Data	372
7.2.1	Testing the Parameters of a Multinomial Distribution: Goodness-of-Fit Test	374
7.2.2	Contingency Table: Test for Independence	376
7.3	Goodness-of-Fit Tests to Identify the Probability Distribution	381
7.3.1	Pearson's Chi-Square Test	381
7.3.2	The Kolmogorov-Smirnov Test: (One Population)	384
7.3.3	The Anderson-Darling Test	387
7.3.4	Shapiro-Wilk Normality Test	388
7.3.5	The P-P Plots and Q-Q Plots	389
7.4	Applications: Parametric Analysis	392
7.4.1	Global Warming	392
7.4.2	Hurricane Katrina	393
7.4.3	National Unemployment	396
7.4.4	Brain Cancer	397
7.4.5	Rainfall	399
7.4.6	Prostate Cancer	402
7.6	Chapter Summary	406
7.7	Computer Examples	406
7.7.1	R-Commands	406
7.7.2	Minitab Examples	407
	Projects for Chapter 7	408

CHAPTER 8	Linear Regression Models	409
8.1	Introduction	410
8.2	The Simple Linear Regression Model	411
8.2.1	The Method of Least-Squares	413
8.2.2	Derivation of $\hat{\beta}_0$ and $\hat{\beta}_1$	414
8.2.3	Quality of the Regression	418
8.2.4	Properties of the Least-Squares Estimators for the Model $Y = \beta_0 + \beta_1 x + \varepsilon$	420
8.2.5	Estimation of Error Variance σ^2	422
8.3	Inferences on the Least-Squares Estimators	425
8.3.1	Analysis of Variance (ANOVA) Approach to Regression	430
8.4	Predicting a Particular Value of Y	433
8.5	Correlation Analysis	436
8.6	Matrix Notation for Linear Regression	440
8.6.1	ANOVA for Multiple Regression	444
8.7	Regression Diagnostics	446
8.8	Chapter Summary	449
8.9	Computer Examples	450
8.9.1	Examples Using R	450
8.9.2	Minitab Examples	453
8.9.3	SPSS Examples	454
8.9.4	SAS Examples	454
	Project for Chapter 8	456
CHAPTER 9	Design of Experiments	459
9.1	Introduction	460
9.2	Concepts from Experimental Design	461
9.2.1	Basic Terminology	461
9.2.2	Fundamental Principles: Replication, Randomization, and Blocking	466
9.2.3	Some Specific Designs	469
9.3	Factorial Design	477
9.3.1	One-Factor-at-a-Time Design	478
9.3.2	Full Factorial Design	480
9.3.3	Fractional Factorial Design	480
9.4	Optimal Design	481
9.4.1	Choice of Optimal Sample Size	482
9.5	The Taguchi Methods	484
9.6	Chapter Summary	488

9.7	Computer Examples	489
9.7.1	Examples Using R	489
9.7.2	Minitab Examples	491
9.7.3	SAS Examples	491
	Projects for Chapter 9	493
CHAPTER 10	Analysis of Variance	495
10.1	Introduction	496
10.2	ANOVA Method for Two Treatments (Optional)	498
10.3	ANOVA for Completely Randomized Design	505
10.3.1	The p -Value Approach	510
10.3.2	Testing the Assumptions for One-Way ANOVA	512
10.3.3	Model for One-Way ANOVA (Optional)	517
10.4	Two-Way ANOVA, Randomized Complete Block Design ...	521
10.5	Multiple Comparisons	528
10.6	Chapter Summary	535
10.7	Computer Examples	535
10.7.1	Examples Using R	536
10.7.2	Minitab Examples	537
10.7.3	SPSS Examples	540
10.7.4	SAS Examples	540
	Projects for Chapter 10	545
CHAPTER 11	Bayesian Estimation Inference	549
11.1	Introduction	550
11.2	Bayesian Point Estimation	552
11.2.1	Criteria for Finding the Bayesian Estimate	558
11.3	Bayesian Confidence Interval or Credible Intervals	568
11.4	Bayesian Hypothesis Testing	573
11.5	Bayesian Decision Theory	576
11.6	Chapter Summary	583
11.7	Computer Examples	584
11.7.1	Examples with R	584
	Projects for Chapter 11	587
CHAPTER 12	Nonparametric Tests	589
12.1	Introduction	590
12.2	Nonparametric Confidence Interval	592
12.3	Nonparametric Hypothesis Tests for One Sample	597
12.3.1	The Sign Test	597

12.3.2	Wilcoxon Signed Rank Test.....	601
12.3.3	Dependent Samples: Paired Comparison Tests	606
12.4	Nonparametric Hypothesis Tests for Two Independent Samples	609
12.4.1	Median Test.....	609
12.4.2	The Wilcoxon Rank Sum Test.....	613
12.5	Nonparametric Hypothesis Tests for $k \geq 2$ Samples	618
12.5.1	The Kruskal-Wallis Test	618
12.5.2	The Friedman Test.....	621
12.6	Chapter Summary	627
12.7	Computer Examples.....	627
12.7.1	Examples Using R	628
12.7.2	Minitab Examples.....	630
12.7.3	SPSS Examples.....	632
12.7.4	SAS Examples	633
	Projects for Chapter 12.....	635
CHAPTER 13	Empirical Methods	639
13.1	Introduction	640
13.2	The Jackknife Method	640
13.3	An Introduction to Bootstrap Methods.....	645
13.3.1	Bootstrap Confidence Intervals	650
13.4	The Expectation Maximization Algorithm.....	651
13.5	Introduction to Markov Chain Monte Carlo	662
13.5.1	Metropolis Algorithm	666
13.5.2	The Metropolis-Hastings Algorithm	670
13.5.3	Gibbs Algorithm	673
13.5.4	MCMC Issues	676
13.6	Chapter Summary	678
13.7	Computer Examples.....	679
13.7.1	Examples Using R	679
13.7.2	Examples with Minitab	685
13.7.3	SAS Examples	686
	Projects for Chapter 13.....	686
CHAPTER 14	Some Issues in Statistical Applications:	
	An Overview	687
14.1	Introduction	688
14.2	Graphical Methods.....	689
14.3	Outliers	694

14.4	Checking Assumptions	699
14.4.1	Checking the Assumption of Normality	699
14.4.2	Data Transformation	703
14.4.3	Test for Equality of Variances	705
14.4.4	Test of Independence	709
14.5	Modeling Issues	712
14.5.1	A Simple Model for Univariate Data	713
14.5.2	Modeling Bivariate Data	715
14.6	Parametric Versus Nonparametric Analysis	719
14.7	Tying it All Together	721
14.8	Conclusion	731
APPENDIX A	Set Theory	733
APPENDIX B	Review of Markov Chains	737
APPENDIX C	Common Probability Distributions	743
APPENDIX D	What is R?	745
APPENDIX E	Probability Tables	747
	References	785
