

Geophysical data, by the nature of their underlying phenomena and processes, are amenable to statistical analysis for testing and interpretation. Though still developing, mathematical statistics is by no means a young subject. The application of statistical concepts to descriptive and to inference problems inherent in and associated with hydrologic and other data used in water resources engineering is much younger. The last few decades have witnessed, however, the publication of an uncountable number of papers which amply demonstrate the usefulness of statistical techniques in analyzing a wide range of hydrologic problems of practical interest. This state of affairs does not eliminate the fact that only a few text books on this topic are available, a situation that makes learning and teaching the methods of statistical analysis in water resources engineering far from being an easy task. In an attempt to fill in a certain depth of the existing gap, the authors, in view of their long-standing experience in teaching this subject, have undertaken the responsibility of producing this text book. The book covers to a certain extent the topics of: hydrologic variables, presentation of data, statistical moments, elementary theory of probability, probability distributions, estimation of parameters, testing hypothesis, frequency analysis, applications, regression and correlation, some aspects of time series analysis and (simple) stochastic models in hydrology, all written in hydrological language. Each chapter is supported by solved examples, case studies, and exercises with hints to solution. With this coverage, it is hoped that the book will help serve the interests of the students, graduates, and the professionals in the field of water resources engineering.

Table of contents

FOREWORD	xi
PREFACE	xiii
 1 HYDROLOGIC VARIABLES, PROCESSES AND DATA	
1.1 Hydrologic variables	1
1.2 Hydrologic series	3
1.3 Population and sample	5
1.4 Hydrologic processes	6
1.5 Hydrologic data	8
1.6 Errors in data	9
1.7 Exercises	10
 2 PRESENTATION OF DATA	
2.1 Tabular and graphical presentations	11
2.2 Grouping of data	12
2.3 Ungrouped data	24
2.4 Exercises	31
 3 STATISTICAL DESCRIPTORS OF DATA	
3.1 Descriptors of central tendency	33
3.2 Descriptors of dispersion	37
3.3 Moments	42
3.4 Asymmetry and peakedness	44
3.5 Linear transformation of sample values	46
3.6 Exercises	49

4 ELEMENTARY PROBABILITY THEORY

4.1	Introduction	50
4.2	Definitions and examples	50
4.3	Events	52
4.4	Probability laws	56
4.5	Conditional probability	58
4.6	Multiplication rule and statistical independence	59
4.7	Bayes' rule	64
4.8	Random variables	66
4.9	Probability distributions	68
4.10	Moments of distributions of random variables	72
4.11	Exercises	76

5 PROBABILITY DISTRIBUTIONS

5.1	Preliminaries	81
5.2	Bernoulli-experiments	86
5.3	Binomial distribution	86
5.4	Geometric distribution and Pascal distribution	89
5.5	Hypergeometric distribution	91
5.6	Poisson distribution	93
5.7	Multinomial distribution	94
5.8	Uniform distribution	95
5.9	Normal distribution	98
5.10	Lognormal distribution	104
5.11	Gamma distribution	107
5.12	Pearson type III distribution	109
5.13	Log-Pearson type III distribution	110
5.14	Beta distributions	110
5.15	Extreme value distributions	112
5.16	Sampling distributions	114
5.17	Summary of distributions	118
5.18	Exercises	123

6 ESTIMATION OF PARAMETERS

6.1	Introduction	126
6.2	Preliminaries	127
6.3	Method of moments	130
6.4	Method of maximum likelihood	133
6.5	Interval estimation	139
6.6	Confidence regions	144
6.7	Confidence regions in case of two samples	147

6.8	Summary of estimates	154
6.9	Exercises	160
 7 TESTING STATISTICAL HYPOTHESES		
7.1	Introduction	162
7.2	Test for the mean of a normal distribution	165
7.3	Power of a test	169
7.4	Some common tests	171
7.5	Some two sample tests	177
7.6	Some other tests	180
7.7	Exercises	185
 8 FREQUENCY ANALYSIS		
8.1	Introduction	188
8.2	Probability papers	189
8.3	Normal distribution	191
8.4	Lognormal distributions	193
8.5	Pearson type III distribution	199
8.6	Gumbel EV1 distribution	203
8.7	Type III extreme value distribution	208
8.8	Exercises	216
 9 APPLICATIONS OF PROBABILITY DISTRIBUTIONS		
9.1	Precipitation	218
9.2	Runoff and stream flow	229
9.3	Exercises	243
 10 REGRESSION AND CORRELATION		
10.1	Types of variables	245
10.2	Regression analysis	246
10.3	Least squares estimation	249
10.4	Properties of estimators	261
10.5	Confidence intervals	263
10.6	Testing hypotheses	268
10.7	Analysis of variance	272
10.8	Correlation analysis	275
10.9	Exercises	278

11 SOME ASPECTS OF TIME SERIES ANALYSIS

11.1	Introduction	280
11.2	Time series analysis	281
11.3	Autocorrelation analysis	286
11.4	Spectral analysis	307
11.5	Bivariate time series	315
11.6	Exercises	321

12 STOCHASTIC MODELS IN HYDROLOGY

12.1	Introduction	323
12.2	Review of some stochastic processes	323
12.3	A brief description of model building	337
12.4	Some stochastic hydrologic models	338
12.5	Exercises	348

A INTRODUCTORY LINEAR ALGEBRA

A.1	Solving linear equations	351
A.2	Matrices and vectors	354
A.3	Expectations and (co)variances	358
A.4	A transformation	359

STATISTICAL AND MATHEMATICAL TABLES	361
