

CONTENT

List of Participants	7
Programme of the Workshop	9
SECTION – A	11
Principles of laser flash photolysis, applications to photocatalysis research	13
Reactivity of hydroxyl radical on benzene ring and side chain in the photocatalytic degradation of phenylurea derivatives	15
Some approaches to standard photocatalyst tests in gaseous and liquid phase	17
The redox system Resazurin/Glycerol: A new model contaminant for standardization of thin-film photocatalytic activity	21
Methylen blue, Acid orange 7 and Resazurin as model dyes for photocatalytic activity determination	23
SECTION – B	27
Organic / Inorganic hybridisation and hierarchical functionality	29
Physical and electrochemical characterization of sol-gel-TiO ₂ -layers	33
Plasma deposition and photoelectrochemical properties of nanoscaled titanium (IV) oxide thin layers	37
Synthesis and properties of phthalocyanines	41
Photocatalytic properties of phthalocyanines	43
Degradation of 4-chlorophenol photoinduced by iron(III)-citrate complex (FeCitrate) in aqueous solution	46
SECTION – C	47
Photocatalytic titania-based coatings and paints	49
Transparent, superhydrophilic coatings based on photocatalytically active nanoparticles	53
Sol gel multilayer TiO ₂ films, relation between crystallinity photoactivity and surface hydrophilicity	55
Particulate TiO ₂ films preparation and characterization	59
SECTION – D	63
Photodegradation of POPs in water catalyzed by immobilized TiO ₂ : routes towards higher efficiency	65
Mathematical simulation of the microstructured electrochemical reactors	69
Preparation of conductive Ti oxides	71
Optimization of electrochromic nickel oxide/hydroxide thin films prepared by alternately dipping deposition	73
Alphabetic author list	77
