Introduction	v
Preface	v
Book Outline	v
Acknowledgements	v
List of Notation	vi
1. Historical Perspective	1
2. Maxwell's Equations	12
2.1 Maxwell's Equations in Anisotropic Medium	12
2.2 Matrix Formulation in Gyrotropic Media	13
2.3 Solution in Electrically Anisotropic Medium	13
2.4 Medium with Both Electric and Magnetic Anisotropy	14
2.5 Polarization States and Dynamical Matrix	16
3. Optical Waves in Multilayers	18
3.1 Multilayer Matrix Construction	18
3.2 Polarization States in Isotropic Regions	19
3.3 Anisotropic Multilayers	20
4. Characteristic Matrix	24
4.1 The Role of the Characteristic Matrix	24
4.2 The Basic Magneto-Optical Configurations	24
4.3 Characteristic Matrix of Isotropic Layer	29
4.4 Characteristic Matrix of Anisotropic Layer	32
5. Prism Coupling	36
5.1 Prism Coupling to a Thin Layer with Transversal Magnetization	36
5.2 Reflection and Transmission Coefficients	39
5.3 Transversal Geometry	41
5.4 Prism Coupling to a Thin Layer with Longitudinal Magnetization	43

6. Gap Characteristic Matrix	46
6.1 Characteristic Matrix of Isotropic Gap	46
6.2 Coupling Gap in Transversal Magnetization	48
7. Waveguiding	50
7.1 Transversal Magnetization	50
7.2 Longitudinal Magnetization	54
7.3 General Magnetization	58
8. Structures with Absorbing Layer	63
8.1 Absorbing Film on a Transparent Substrate	63
8.2 Transparent Film on an Absorbing Substrate	67
9. Periodic Nanostructures	69
9.1 Lamellar Periodic Structures	69
9.2 Two-Dimensional Periodic Structures	72
9.3 Generalized Gratings	75
10. Plasmon Waves	77
10.1 Plasmon Wave Generation	77
10.2 Sensitivity Factors	79
10.3 SPR Structures with MO Response	83
11. Diagnostics by Total Reflection	91
11.1 Planar Problems	91
11.2 TIRE on Periodical Structures	94
12. Inverse Problems	103
12.1 General Principles	103
12.2 Application Problem Examples	105
12.3 Optimization of SPR Systems	109
13. Effective Medium	114
13.1 Isotropic Materials	114
13.2 Anisotropic Media	115
List of Figures	120
Index	121
