List of Figures	xi
List of Tables	xv
Preface.....	xvii
Acknowledgments	xxi
1. Preliminaries	1
1.1 Introduction	1
1.2 Psychological Attributes as Latent Variables	2
1.3 Challenges in the Measurement of Latent Constructs	3
1.4 What Is a Questionnaire?	4
1.5 Main Steps in Questionnaire Construction	7
1.6 What Is Psychometric Theory?	8
1.7 Notation	9
1.8 Datasets Used for Examples	13
1.8.1 Italian Institute for the Evaluation of the Education System Dataset	13
1.8.2 Russian Longitudinal Monitoring Survey Dataset	15
1.8.3 Hospital Anxiety and Depression Scale Dataset	18
Exercises	20
2. Classical Test Theory	23
2.1 Introduction	23
2.2 Foundation	24
2.3 Models	25
2.4 Conceptual Approaches of Reliability	26
2.5 Reliability of Parallel and Nonparallel Tests	28
2.6 Procedures for Estimating Reliability	30
2.6.1 Alternate Form Method	30
2.6.2 Test-Retest Method	31
2.6.3 Split-Half Method	32
2.6.4 Internal Consistency Reliability Method	33
2.7 True Score Estimation	35
2.8 Item Analysis	37
2.9 Validity	39
2.10 Test Bias	41
2.11 Generalizability Theory	43

2.12	Examples.....	44
2.12.1	INVALSI Grammar Data: A Classical Analysis in Stata	45
2.12.2	RLMS Data: A Classical Analysis in R	58
	Exercises	62
3.	Item Response Theory Models for Dichotomous Items	65
3.1	Introduction	65
3.2	Model Assumptions	66
3.3	Rasch Model.....	71
3.4	2PL Model	75
3.5	3PL Model	77
3.6	Random-Effects Approach	78
3.6.1	Nonlinear Mixed Framework	79
3.6.2	Latent Class Approach.....	81
3.7	Summary about Model Estimation	82
3.8	Examples.....	84
3.8.1	RLMS Binary Data: Rasch and 2PL Models in Stata	84
3.8.1.1	Data Organization.....	85
3.8.1.2	Analysis in <code>gllamm</code> under the Assumption of Normality of the Latent Trait	87
3.8.1.3	Alternatives to <code>gllamm</code> for the Rasch Model.....	95
3.8.2	INVALSI Mathematics Data: Rasch, 2PL, and 3PL Models in R	98
3.8.2.1	Data Organization.....	100
3.8.2.2	Analysis under Normal Distribution for the Ability	101
3.8.2.3	Alternatives to <code>ltm</code> for Rasch and 2PL Models	105
3.8.2.4	3PL Model	107
3.8.2.5	Analysis under Discrete Distribution for the Ability	109
	Exercises	114
4.	Item Response Theory Models for Polytomous Items	117
4.1	Introduction	117
4.2	Model Assumptions	118
4.3	Taxonomy of Models for Polytomous Responses	121
4.3.1	Classification Based on the Formulation of the Item Response Characteristic Curves	121
4.3.2	Statistical Properties of Models for Polytomous Responses	124

4.4	Models for Ordinal Responses	126
4.4.1	Graded Response Models	128
4.4.2	Partial Credit Models	132
4.4.2.1	Basic Formulation	132
4.4.2.2	Rating Scale Model	137
4.4.3	Sequential Models	138
4.5	Models for Nominal Responses	140
4.6	Examples	141
4.6.1	Depression Dimension of HADS: Analysis in Stata	141
4.6.1.1	Data Organization	141
4.6.1.2	Analysis in gllamm under the Assumption of Normality for the Latent Trait	142
4.6.2	RLMS Data: Analysis in R	152
4.6.2.1	Data Organization	152
4.6.2.2	Analysis under Normal Distribution for the Ability	153
4.6.2.3	Analysis under Discrete Distribution for the Ability	158
	Exercises	165
5.	Estimation Methods and Diagnostics	167
5.1	Introduction	167
5.2	Joint Maximum Likelihood Method	168
5.2.1	Rasch Model	169
5.2.2	2PL and 3PL Models	172
5.3	Conditional Maximum Likelihood Method	173
5.4	Marginal Maximum Likelihood Method	175
5.4.1	Estimation with Normal Distribution for the Ability	176
5.4.2	Estimation with Discrete Distribution for the Ability	178
5.5	Estimation of Models for Polytomous Items	179
5.6	Graphical Diagnostic Tools	181
5.6.1	Item Information and Test Information Functions	181
5.6.2	Person-Item Map and Test Characteristic Curve	186
5.6.3	Received Operation Characteristic Curve	187
5.7	Goodness-of-Fit	192
5.7.1	Information Criteria and Pseudo- R^2	192
5.7.2	Parametric and Nonparametric Hypothesis Tests	193
5.7.2.1	Parametric Tests	194
5.7.2.2	Nonparametric Tests	200

5.8	Infit and Outfit Statistics	201
5.9	Differential Item Functioning.....	204
5.9.1	Non-IRT-Based Methods for DIF Detection	206
5.9.2	IRT-Based Methods for DIF Detection.....	208
5.10	Examples.....	210
5.10.1	RLMS Binary Data and Depression Dimension of HADS: Diagnostics in Stata.....	210
5.10.2	INVALSI Mathematics Data: Diagnostics in R	214
5.10.2.1	Graphical Diagnostic Tools	214
5.10.2.2	Hypothesis Tests for the Adequacy of the Rasch Model.....	219
5.10.2.3	Outfit and Infit Statistics	224
5.10.2.4	DIF Analysis	226
	Exercises.....	230
5.A	Appendix	231
6.	Some Extensions of Traditional Item Response Theory Models.....	239
6.1	Introduction	239
6.2	Models with Covariates	240
6.2.1	Continuous Latent Distribution	241
6.2.2	Discrete Latent Distribution.....	242
6.3	Models for Clustered and Longitudinal Data	245
6.3.1	Continuous Latent Distribution	246
6.3.2	Discrete Latent Distribution.....	250
6.4	Multidimensional Models.....	252
6.5	Structural Equation Modeling Setting.....	255
6.6	Examples.....	258
6.6.1	RLMS Binary Data: Latent Regression 2PL Model in Stata	259
6.6.2	INVALSI Grammar Data: Multilevel Rasch Model with Covariates in Stata	260
6.6.3	HADS Data: Bidimensional Models in Stata	266
6.6.4	RLMS Data: Models with Covariates in R	270
6.6.5	INVALSI Data: Multilevel Multidimensional Models with Covariates in R	274
	Exercises.....	279
	References.....	281
	List of Main Symbols	295
	Index	301
