

Contents

1	Introduction to Graph Colouring	1
1.1	Some Simple Practical Applications	2
1.1.1	A Team Building Exercise	2
1.1.2	Constructing Timetables	4
1.1.3	Scheduling Taxis	5
1.1.4	Compiler Register Allocation	6
1.2	Why "Colouring"?	7
1.3	Problem Description	9
1.4	Problem Complexity	11
1.4.1	Solution Space Growth Rates	12
1.4.2	Problem Intractability	14
1.5	Can We Solve the Graph Colouring Problem?	17
1.5.1	Complete Graphs	18
1.5.2	Bipartite Graphs	19
1.5.3	Cycle, Wheel and Planar Graphs	19
1.5.4	Grid Graphs	20
1.6	About This Book	21
1.6.1	Algorithm Implementations	22
1.7	Chapter Summary	25
2	Bounds and Constructive Algorithms	27
2.1	The Greedy Algorithm	29
2.2	Bounds on the Chromatic Number	32
2.2.1	Lower Bounds	33
2.2.2	Upper Bounds	36
2.3	The DSATUR Algorithm	39
2.4	The Recursive Largest First (RLF) Algorithm	42
2.5	Empirical Comparison	45
2.5.1	Experimental Considerations	46
2.5.2	Results and Analysis	48
2.6	Chapter Summary and Further Reading	50

3	Advanced Techniques for Graph Colouring	55	5.7	List Colouring	140
3.1	Exact Algorithms	55	5.8	Equitable Graph Colouring	142
3.1.1	Backtracking Approaches	55	5.9	Weighted Graph Colouring	144
3.1.2	Integer Programming	58	5.9.1	Weighted Vertices	146
3.2	Inexact Heuristics and Metaheuristics	63	5.9.2	Weighted Edges	148
3.2.1	Feasible-Only Solution Spaces	64	5.9.3	Multicolouring	149
3.2.2	Spaces of Complete, Improper k -Colourings	69			
3.2.3	Spaces of Partial, Proper k -Colourings	73	6	Designing Seating Plans	151
3.2.4	Combining Solution Spaces	74	6.1	Problem Background	151
3.2.5	Problems Related to Graph Colouring	74	6.1.1	Relation to Graph Problems	153
3.3	Reducing Problem Size	74	6.1.2	Chapter Outline	154
3.3.1	Removing Vertices and Splitting Graphs	75	6.2	Problem Definition	154
3.3.2	Extracting Independent Sets	76	6.2.1	Objective Functions	155
			6.2.2	Problem Intractability	156
4	Algorithm Case Studies	79	6.3	Problem Interpretation and Tabu Search Algorithm	156
4.1	Algorithm Descriptions	79	6.3.1	Stage 1	157
4.1.1	The TABUCOL Algorithm	79	6.3.2	Stage 2	158
4.1.2	The PARTIALCOL Algorithm	81	6.4	Algorithm Performance	160
4.1.3	The Hybrid Evolutionary Algorithm (HEA)	83	6.5	Comparison to an IP Model	162
4.1.4	The ANTCOL Algorithm	84	6.5.1	IP Formulation	163
4.1.5	The Hill-Climbing (HC) Algorithm	87	6.5.2	Results	164
4.1.6	The Backtracking DSATUR Algorithm	88	6.6	Chapter Summary and Discussion	166
4.2	Algorithm Comparison	89			
4.2.1	Artificially Generated Graphs	90	7	Designing Sports Leagues	169
4.2.2	Exam Timetabling Problems	96	7.1	Problem Background	169
4.2.3	Social Networks	99	7.1.1	Further Round-Robin Constraints	171
4.3	Conclusions	102	7.1.2	Chapter Outline	173
4.4	Further Improvements to the HEA	104	7.2	Representing Round-Robins as Graph Colouring Problems	173
4.4.1	Maintaining Diversity	104	7.3	Generating Valid Round-Robin Schedules	174
4.4.2	Recombination	106	7.4	Extending the Graph Colouring Model	175
4.4.3	Local Search	108	7.5	Exploring the Space of Round-Robins	180
			7.6	Case Study: Welsh Premiership Rugby	184
5	Applications and Extensions	111	7.6.1	Solution Methods	185
5.1	Face Colouring	111	7.7	Chapter Summary and Discussion	192
5.1.1	Dual Graphs, Colouring Maps, and the Four Colour Theorem	114			
5.1.2	Four Colours Suffice	118	8	Designing University Timetables	195
5.2	Edge Colouring	120	8.1	Problem Background	195
5.3	Precolouring	124	8.1.1	Designing and Comparing Algorithms	197
5.4	Latin Squares and Sudoku Puzzles	125	8.1.2	Chapter Outline	198
5.4.1	Solving Sudoku Puzzles	128	8.2	Problem Definition and Preprocessing	199
5.5	Short Circuit Testing	132	8.2.1	Soft Constraints	202
5.6	Graph Colouring with Incomplete Information	135	8.2.2	Problem Complexity	203
5.6.1	Decentralised Graph Colouring	135	8.2.3	Evaluation and Benchmarking	204
5.6.2	Online Graph Colouring	138	8.3	Previous Approaches to This Problem	204
5.6.3	Dynamic Graph Colouring	140	8.4	Algorithm Description: Stage One	206

8.4.1	Results	207
8.5	Algorithm Description: Stage Two	209
8.5.1	SA Cooling Scheme	209
8.5.2	Neighbourhood Operators	209
8.5.3	Dummy Rooms	212
8.5.4	Estimating Solution Space Connectivity	213
8.6	Experimental Results	214
8.6.1	Effect of Neighbourhood Operators	214
8.6.2	Comparison to Published Results	217
8.6.3	Differing Time Limits	217
8.7	Chapter Summary and Discussion	218
A	Computing Resources	223
A.1	Algorithm User Guide	223
A.1.1	Compilation in Microsoft Visual Studio	224
A.1.2	Compilation with g++	224
A.1.3	Usage	224
A.1.4	Output	225
A.2	Graph Colouring in Sage	228
A.3	Graph Colouring with Commercial IP Software	234
A.4	Useful Web Links	237
