8 The New Submersibles

by Barrie B. Walden

Newly developed deep-submergence vehicles are providing unprecedented views of the deep ocean and seafloor.

28 Calling Nature's Bluff: The Secret World of Cliffs

by D.W. Larson, P.E. Kelly, and U. Matthes-Sears

Sheer cliffs are the sites of unusual assemblages of plants and animals, some so old that they provide information about climate and the environment several thousand years ago.

69

48 New Eyes on the Gamma-Ray Sky

by Kenneth Brecher

The most diverse set of gamma-ray instruments ever sent into space is giving astronomers an unequaled view of our violent cosmos.

66 Art, Science, and the Renaissance Way of Seeing

by Samuel Y. Edgerton, Jr.

Renaissance Europeans developed a way of looking at physical reality that was unique among the world's cultures. This transformation in perception was critical to the subsequent revolutions in Western art and science.

88

84 NO and CO: The Body's Unprecedented Signaling Molecules

by Solomon H. Snyder

Two noxious gases have been found, surprisingly, to play vital communications roles in the human brain, digestive tract, and elsewhere in the body.

102 When the Mind Grows Older: Perspectives on Cognitive Aging

by Douglas H. Powell

Research on intellectually able people in their 70s and 80s is helping scientists understand the patterns and implications of cognitive aging.

143

114 The Paleolithic Health Club

by Vaughn M. Bryant, Jr.

Paleolithic humans followed a diet and lifestyle in tune with their bodies. Their remains offer valuable lessons for improving the quality of our own lives.

134 Computing with Light

by David A.B. Miller

Consisting of lasers, switches, and optical fibers, the first general-purpose optical computer uses light instead of electricity to store programs, process data, and perform calculations.

148 The Rebirth of Electric Vehicles

by Gill A. Pratt

Recently improved batteries, chargers, motors, and motor controls seem likely to result in vehicles that will be particularly suitable for urban use.

168 Borrowing the Best from Nature

by Julian F.V. Vincent

Every organism can be viewed as a collection of solutions to problems posed by the needs of survival. The efforts of researchers to exploit those solutions are promising new materials and processes.

188 Zoopharmacognosy: Animals Healing Themselves

by Eloy Rodriguez

Scientists have discovered that many animals recognize, select, and use plants for apparently medicinal purposes.

200 Species That Need No Introduction

by Stuart L. Pimm

When new species are brought into existing biological communities, they can wreak enormous damage. Finding the best ways of preventing unwanted introductions presents a formidable challenge.

220 Lecture Demonstrations: Science's Live Theater

by George B. Kauffman

Today's masters of the scientific lecture demonstration carry on the tradition of Davy, Faraday, and other distinguished forebears in making science fun and understandable to students and the public.

A Science Classic

460 *On the Origin of Species by Means of Natural Selection*

(excerpts) by Charles Darwin

Institutions of Science

472 *CSIRO: Australia's Science Powerhouse*

by John W. Stocker

A national laboratory created in the early 20th century to support Australia's farming and mining sectors has since grown into that country's largest, most wide-ranging research establishment.
