

Contents

Preface and acknowledgments

1. Carbonaceous substances in Oklo reactors—Analogue for permanent deep geologic disposal of anthropogenic nuclear waste

DAVID J. MOSSMAN, FRANÇOIS GAUTHIER-LAFAYE,
ADRIANA DUTKIEWICZ, AND RALF BRÜNING

2. Disposal of radioactive waste in rock caverns: Current situation in the Czech Republic

FRANTISEK WOLLER

3. Reverse mining—The development of deep geologic isolation of hazardous (chemotoxic) waste in Germany and its international prospects

HARTMUT W.J. SCHADE

4. Underground repositories for chemically toxic waste in German salt and potash mines

HARTMUT BEHNSEN

5. Geological characterization of the Asse salt mine for mining, disposal of radioactive waste, and proof of long-term safety

G. GÄRTNER, N. STOCKMANN, H. FRICKE, AND R. WALLMÜLLER

6. Geological features of the Morsleben repository and their relevance for long-term safety

W. BREWITZ, J. DROSTE, AND G. STIER-FRIEDLAND

7. Repositories for low- and intermediate-level radioactive wastes in Finland

TIMO ÄIKÄS AND PEKKA ANTILA

8. Geological disposal of radioactive waste— Experience from operating facilities in Sweden

OLLE OLSSON, TOMMY HEDMAN, BO SUNDMAN, AND CHRISTER SVEMAR

9. Lessons from early site investigations at the Waste Isolation Pilot Plant

DENNIS W. POWERS AND ROBERT M. HOLT

10. The French underground research laboratory in Bure as a precursor for deep geological repositories

JACQUES DELAY, ANDRÉ LESAVRE, AND YANNICK WILEVEAU

11. Suitability of generic rock to isolate dangerous waste

BERNARD L. COHEN

Contents

<i>Preface and acknowledgments</i>	vii
1. <i>Carbonaceous substances in Oklo reactors—Analogue for permanent deep geologic disposal of anthropogenic nuclear waste</i>	1
<i>David J. Mossman, François Gauthier-Lafaye, Adriana Dutkiewicz, and Ralf Brüning</i>	
2. <i>Disposal of radioactive waste in rock caverns: Current situation in the Czech Republic</i>	15
<i>Frantisek Woller</i>	
3. <i>Reverse mining—The development of deep geologic isolation of hazardous (chemotoxic) waste in Germany and its international prospects</i>	23
<i>Hartmut W.J. Schade</i>	
4. <i>Underground repositories for chemically toxic waste in German salt and potash mines</i>	31
<i>Hartmut Behnsen</i>	
5. <i>Geological characterization of the Asse salt mine for mining, disposal of radioactive waste, and proof of long-term safety</i>	41
<i>G. Gärtner, N. Stockmann, H. Fricke, and R. Wallmüller</i>	
6. <i>Geological features of the Morsleben repository and their relevance for long-term safety</i>	53
<i>W. Brewitz, J. Droste, and G. Stier-Friedland</i>	
7. <i>Repositories for low- and intermediate-level radioactive wastes in Finland</i>	67
<i>Timo Äikäs and Pekka Anttila</i>	
8. <i>Geological disposal of radioactive waste—Experience from operating facilities in Sweden</i>	73
<i>Olle Olsson, Tommy Hedman, Bo Sundman, and Christer Svemar</i>	
9. <i>Lessons from early site investigations at the Waste Isolation Pilot Plant</i>	81
<i>Dennis W. Powers and Robert M. Holt</i>	
10. <i>The French underground research laboratory in Bure as a precursor for deep geological repositories</i>	97
<i>Jacques Delay, André Lesavre, and Yannick Wileveau</i>	
11. <i>Suitability of generic rock to isolate dangerous waste</i>	113
<i>Bernard L. Cohen</i>
