Preface	ix
Full texts	
Numerical simulation of dynamic and shock compression for metals <i>Yuriy Bayandin, Natalia Saveleva, Oleg Naimark, Ivan Panteleev, Catherine Froustey</i>	2
Use of microwave technique for study of isentropic detonation products expansion <i>Evgeny N. Bogdanov, Vladimir M. Belskiy, Mikhail Zhernokletov, Anatoly L. Mikhaylov, Alexey V. Rodionov, Alexander A. Sedov</i>	14
Shock-temperature measurements: application to the polymorphic transition of tin <i>Chauvin Camille</i>	20
Effect of Structure on Deformation Behavior of Ma2-1 Magnesium Alloy <i>Gennady Garkushin, Sergey V. Razorenov, Vladimir Krasnovyeykin, Alexander Kozulin, Vladimir Skripnyak</i>	24
Numerical simulation of the protection from high-speed projectiles <i>Alexander V. Gerasimov, Sergey V. Pashkov</i>	28
TKX-50 and MAD-X1 <i>Vladimir Golubev, Thomas M. Klapötke, Jörg Stierstorfer, Tomasz Witkowski</i>	36
Interaction between Shock Front and Free Surface from the Experimental View <i>Haibo Hu</i>	47
Dominating role of early stage shear instabilities on the nonlinear evolution of the stress and strain field inside the intensive explosively loaded metal tube wall <i>Haibo Hu, Mingtao Liu, Tiegang Tang, Shan Jin</i>	52
High-velocity impact phenomena on the example of a model space nuclear powerplant <i>Evgeny Kraus, Ivan Shabalín</i>	58
Modeling of dislocation plasticity and fracture of metals at shock-wave processes <i>Alexander E. Mayer, Konstantin V. Khishchenko</i>	79
Microwave diagnostics of shock wave and detonation processes <i>Anatoly L. Mikhaylov, Vladimir M. Belskiy, Evgeny N. Bogdanov, Alexey V. Rodionov, Alexander A. Sedov, Vladimir N. Khvorostin</i>	88
Calculation experiment technology: hypercumulative shaped charge <i>Igor Minin, Vladilen Minin, Oleg Minin</i>	98
On the equation of state and elastoplastic and strength properties of beryllium <i>Boris Nadykto, Ivan Pavlusha, Maria Shirshova</i>	104

Multiscale kinetics of damage-failure transition: in-situ dynamic experiments and modeling <i>Oleg Naimark</i>	109
Beryllium strain under dynamic loading <i>Victor Pushkov, Alexey Yurlov, Andrew Okinchits, Tatiana Naydanova</i>	115
Mathematical modeling of elastic precursor decay induced by defects <i>Natalia Saveleva, Yuriy Bayandin, Oleg Naimark</i>	119
Three-stage symplectic difference schemes of molecular dynamics. Description, classification, numerical and analytical research <i>Valery E. Shemarulin, Vasily N. Sofronov</i>	125
Plastic Behavior of Aluminum in High Strain Rate Regime <i>Hua Shu</i>	138
Modeling of mechanical behavior of ceramic nanocomposites under shock pulse loading <i>Evgeniya Skripnyak, Vladimir V. Skripnyak, Irina Vaganova, Vladimir A. Skripnyak</i>	145
Multiscale approach for simulation of mechanical response of ultrafine-grained alloys with grain size distribution subjected to impact loading <i>Vladimir V. Skripnyak, Nataliya Skripnyak, Vladimir A. Skripnyak</i>	155
Realization, research and testing of 3D calculation methods to solve MHD equations in Eulerian variables for compressible multi-material media <i>Yury V. Yanilkin, Marina Yu. Yeguzhova, Vadim A. Zhmailo, Vasily N. Sofronov, Olga N. Chernysheva</i>	165
Experimental and numerical study of shock wave synthesis in solid mixtures <i>Sergey A. Zelepugin, Oxana V. Ivanova, Alexander S. Yunoshev, Viktor V. Silvestrov</i>	177
Abstracts	
Detonation Shock Dynamics (DSD): advanced programmed-burn scheme for hydrocodes <i>Toru Aida</i>	186
MD modeling of phase transformation in FCC metals under shock conditions <i>Alexey V. Bolesta, Vasily M. Fomin</i>	187
Numerical and experimental studies of mixture WC+Co compaction in axial symmetric scheme <i>Andrey Buzurkin, Evgeny Kraus, Yaroslav Lukyanov</i>	188
Detonation products afterburning effect at plate acceleration <i>Vitaly Davydov, Ivan Potapov, Alexander Goubin</i>	189
Numerical modeling of detonation products expansion and plate acceleration by phlegmatized hmx and rdx <i>Vitaly Davydov, Phillip Zagryadsky, Alexey Nikitin, Yuri Belyakov</i>	190

Mechanical Activation and Explosive Properties of Aluminized Ammonium Perchlorate <i>Alexander Dolgoborodov, Vladimir Kirilenko, Michael Brazhnikov, Viktor Teselkin, Andrew Streletskii</i>	191
An equation of state for platinum <i>Vyacheslav Elkin, Vadim Mikhaylov, Tatiana Mikhaylova</i>	192
Large scale molecular dynamics simulations of ejection at the free surface of shocked-loaded Cu and Sn metals under melt conditions <i>Olivier Durand, Laurent Soulard</i>	193
Molecular simulation study of the fragmentation of metallic liquid sheets ejected from a shock-loaded material <i>Gaëlle Filippini, Emeric Bourasseau, Olivier Durand, Laurent Soulard</i>	194
EOS models for hydrocodes <i>Vladimir Fortov, Igor Lomonosov</i>	195
Atomistic simulation studies of microstructural effects on the shock response of metals: from bicrystals to exascale computing <i>Timothy C. Germann</i>	196
Effects of interaction of high-velocity spherical projectiles during their penetration into a low-strength barrier <i>Vladimir K. Golubev</i>	197
Effects of geometrical features of rear and lateral surfaces of a sample on its spall damage under shock loading <i>Vladimir K. Golubev</i>	198
Electroconductivity of polymorphic modifications of shocked titanium in megabar range <i>Andrey Golyshev, Alexander Molodets</i>	199
Inhomogeneities evolution in layered structured systems <i>Kirill Gorodnischev, Sergey Kuratov, Alexey Serezhkin</i>	200
NEMD Simulations of Frictional Forces at Compressed Ductile Metal Interfaces <i>James E. Hammerberg, Jacqueline Milhans, Ramon Ravelo, Timothy C. Germann</i>	201
A new equation of state for gas detonation products <i>Yong Han, Xin Long, Xiang Guo</i>	202
A Dislocation Dynamics Model of the Plastic Flow of fcc Polycrystals: Dislocation Intersection Processes <i>Abigail Hunter, Dean L. Preston</i>	203
Mathematical modeling of elasto-plastic deformation of metals irradiated by ultrashort laser pulses <i>Denis Ilnitsky, Nail Inogamov, Vasily Zhakhovsky, Kirill Migdal</i>	204
Shock formation and spallation by ultrashort laser pulse <i>Nail Inogamov, Vasily Zhakhovsky, Viktor Khokhlov, Denis Ilnitsky, Vadim Shepelev</i>	205

MD modeling of screw dislocation influence upon initiation and mechanism of α - ϵ -polymorphous transition in iron <i>Gennady Ionov, Vladimir Dremov, Filipp Sapozhnikov, Marina Vorobyova, Nicolay Smirnov, Natalya Chizhkova</i>	206
Comparative analysis of the interatomic interaction models for description of polymorphous transitions in iron <i>Gennady Ionov, Vladimir Dremov, Marina Vorobyova, Filipp Sapozhnikov, Nicolay Smirnov, Natalya Chizhkova</i>	207
An Investigation of the Kinetics of Phase Transformation in Iron <i>Yu Jidong</i>	208
Implications of Modern Electromagnetics for Computational Mechanics <i>James Kamm</i>	209
Evaluation of the temperature-rate dependences of the resistance to deformation and fracture from experiments with shock waves <i>Gennady I. Kanel, Eugene B. Zaretsky, Sergey I. Ashitkov, Sergey V. Razorenov</i>	210
Modeling of phase transformations of materials in shock waves <i>Konstantin V. Khishchenko</i>	211
Study of high-speed interaction processes between ready damaging elements containing reaction materials and aluminum based targets <i>Evgeny Khmelnikov, Alexey Styrov, Natalia Kravchenko, Konstantin Smagin, Valery Rudenko, Sergey Sokolov, Artem Svidinsky</i>	212
A two-dimensional traveling longitudinal wave problem for verification of elastoplastic techniques <i>Aleksandr A. Krayukhin, Vadim Yu. Kolobyenin</i>	213
Analysis of the evolution of hydrodynamic instability at the interface of active and passive media <i>Sergey Kuratov, Andrey Mikulin</i>	214
Ab initio approaches and their significance for hydrocodes <i>Pavel Levashov, Dmitry Minakov, Dmitry Knyazev, Sergey Dyachkov, Mikhail Povarnitsyn</i>	215
Experimentally study of the Richtmyer-Meshkov instability at N ₂ /SF ₆ flat interfaces by diffracted incident shock waves and reshock <i>Jinhong Liu, Shenfei Liao, Liyong Zou, Renyi Cao</i>	216
Spall fracture in molten state at shock loading of preheated metals <i>Polina N. Mayer, Alexander E. Mayer</i>	217
Riemann solvers for gas-solid two-phase flows <i>Igor Menshov</i>	218
Use of different elasto-plastic models for describing experimental data of metal scabbing in one-dimensional statement <i>Alexander Mischenko, Igor Menshov, Alexey Kiselev</i>	219

Reconnection ALE (ReALE) as a tool for robustly modeling complex flows <i>John M. Owen</i>	220
Equation of state of the TATB monocrystal from DFT-based ab initio simulations <i>Nicolas Pineau, Laurent Soulard, Gregory Robert, Gregory Geneste, Francois Bottin, Marc Torrent, Arnaud Sollier, Emilien Lescoute, Philippe Hebert, Michel Doucet</i>	221
Two-temperature relaxation of ion tracks in UO2 <i>Vasily Pisarev, Sergey Starikov</i>	222
Revealing a detonation nature of ejecta formation from the mesoscale probing of the PBX-driven liners <i>Igor Plaksin, Raafat Guirguis, Luis Rodrigues, Svyatoslav Plaksin, Ricardo Mendes</i>	223
Disclosing a dominating role of shock-induced shear strain in initiation chemistry of PBX-materials from micro- and meso-scale probing of reaction spot formation <i>Igor Plaksin, Luis Rodrigues, Ricardo Mendes, Svyatoslav Plaksin, Jose Campos</i>	224
A Dislocation Dynamics Model of the Plastic Flow of fcc Polycrystals: Dislocation Evolution Equations <i>Dean L. Preston, Abigail Hunter</i>	225
High-strain rate research on the compression, fracture and friction of metals <i>William Proud</i>	226
3D Simulation of discrete combustion and detonation waves in mechanically activated powder mixtures <i>Sergey Rashkovskiy, Alexander Dolgoborodov</i>	227
Simulation of the detonation process of an ammonium nitrate based emulsion explosive using the explosive burn and the ignition and grow reactive flow models <i>José B. Ribeiro, Eduardo Fernandes, Ricardo Mendes</i>	228
Enabling Hydrocode Meta-Analysis: The ALEGRA-DAKOTA Experience <i>Allen C. Robinson, Richard R. Drake, John H. Carpenter, Raymond W. Lemke</i>	229
Dynamic X-ray imaging of transient physical processes <i>Micheal Rutherford</i>	230
Molecular dynamics code Moloch: from petascale to exascale <i>Filipp Sapozhnikov, Gennady Ionov, Vladimir Dremov</i>	231
Modeling of detonation and deflagration processes in porous solid explosives <i>Alexey Serezhkin, Igor Menshov</i>	232
Atomistic simulation on the failure modes of aluminum under decaying shock loading <i>Jian Li Shao, Pei Wang</i>	233
Molecular dynamics study of shock wave in porous media <i>Laurent Soulard, Nicolas Pineau, Laurent Colombet</i>	234

Comparative analysis of various parallel molecular dynamics algorithms <i>Andrey Utkin, Mikhail Ozhgibesov</i>	235
High Resolution Numerical Simulation of Explosion and Impact Problems <i>Cheng Wang</i>	236
Numerical study on ejecta production and transport properties from shocked metal-gas interface <i>Pei Wang, Hai Quan Sun, Jian Li Shao, Da Wei Chen</i>	237
Failure of metal-intermetallic laminate composites under dynamic loading <i>Aleksey S. Zelepugin, Olga A. Shkoda, Olga K. Lepakova, Sergey A. Zelepugin</i>	238
Peculiar structure of two-zone elastic-plastic single shock wave in Copper in [100] direction <i>Vasily Zhakhovsky, Nail Inogamov, Sergey Anisimov</i>	239
Study of phase transitions in cerium in shock-wave experiments <i>Mikhail Zhernokletov, Valery Borisenok, Vladimir Simakov, Vyacheslav Bragunets, Alexey Podurets, Mikhail Tkachenko</i>	240
