ABSTRACT	4
KEYWORDS	4
ABSTRAKT	4
KLÍČOVÁ SLOVA	4
ACKNOWLEDGMENT	5
AIMS OF THE DOCTORAL STUDIES	6
INTRODUCTION	6
THEORETICAL BACKGROUND	6
1 Stereometry vs. stereology	6
1.1 ASTM E112 standard	7
1.1.1 Comparison procedure	8
1.1.2 Planimetric procedure	8
1.1.3 Intercept procedure	8
2 Tessellations	9
2.1 Point process	9
2.2 Voronoi tessellations	9
3 Planar sections of porous media	9
3.1 Wicksell's corpuscle problem	10
4 Acquiring the digital image of internal structure	12
4.1 X-ray computed tomography	12
5 Image analysis	13
5.1 Thresholding	13
5.2 Contrast modifications	13
5.3 Edge detection	13
5.4 Binary mathematical morphology	14
5.4.1 Erosion	15
5.4.2 Dilation	15
5.4.3 Opening and closing	16
5.4.4 Euclidean distance map	16
5.4.5 Skeletonization	17
5.5 Greyscale mathematical morphology	18
5.5.1 Watershed segmentation	18
EXPERIMENTAL	19
6 Materials	19
7 Methods	20
7.1 Computed X-ray microtomography	20
7.1.1 Instrumentation	20
7.1.2 Sample preparation	20
7.1.3 Scan parameters	21
7.1.4 Slices reconstruction	22
7.1.5 Optional reconstruction parameters	23
7.2 Structural analysis – CTAn software	23
7.2.1 Region and volume of interest	23

7.2.2	Thresholding.....	24
7.3	Structural analysis	25
7.4	Structural analysis – tessellation approach.....	26
7.4.1	Raw image pre-processing	26
7.4.2	Tessellation computation.....	28
7.5	Model of 3D structure	29
8	Results and discussion.....	30
8.1	CT vs. Voronoi tessellation	30
8.2	Acoustic properties of the foams.....	34
8.3	Other possibilities of Voronoi tessellation approach.....	36
8.3.1	Pore size estimation in pastry	36
8.3.2	Pore size estimation in resin/metal sintered composites	38
8.3.3	Grain size estimation in resin/metal sintered composites	40
	CONTRIBUTION TO SCIENCE.....	42
	USED SYMBOLS AND ACRONYMS	43
	LIST OF FIGURES.....	45
	LIST OF TABLES	46
	REFERENCES	47
	LIST OF PUBLICATIONS	51
	CURRICULUM VITAE	52
