

# Fieldwork Through. Enquiry

John Widdowson and Alan Parkinson

This book provides ten worked examples of projects which can be used with young people outside the classroom: five that are based in towns and cities, and five which explore rural or coastal contexts.

It has taken some 'traditional' activities and locations and added some new ideas and techniques. The enquiry approach underpins all the activities in this book. Each chapter is framed as a fieldwork investigation based on a single question, with alternative questions that could be answered using the same techniques.

Each unit comes with student resource sheets, available to download from the GA website. These are as pdf and word versions to allow you to customise them for your own students and location. The ideas in this book can be adapted for use with students at key stage 3 and A level.
