Units and symbols		xiii	2.19	Fluid equations	73
			2.20	Magnetohydrodynamics	75
1	Fusion	1	2.21	Physics of plasma fluid	77
1.1	Fusion and tokamaks	2	2.22	Plasma diamagnetism	80
1.2	Fusion reactions	3	2.23	Braginskii equations	84
1.3	Thermonuclear fusion	5	2.24	Plasma waves	90
1.4	Power balance	8	2.25	Landau damping	96
1.5	Ignition	10			
1.6	Tokamaks	13	3	Equilibrium	101
1.7	Tokamak reactor	15	3.1	Tokamak equilibrium	102
1.8	Fuel resources	21	3.2	Flux functions	104
1.9	Tokamak economics	23	3.3	Grad–Shafranov equation	105
1.10	Tokamak research	24	3.4	Safety factor, q	107
			3.5	Beta	111
2	Plasma physics	29	3.6	Large aspect-ratio	113
2.1	Tokamak plasma	30	3.7	Shafranov shift	115
2.2	Debye shielding	31	3.8	Vacuum magnetic field	117
2.3	Plasma frequency	34	3.9	Electric fields	119
2.4	Larmor orbits	36	3.10	Particle orbits	120
2.5	Particle motion along B	38	3.11	Particle trapping	123
2.6	Particle drifts	40	3.12	Trapped particle orbits	125
2.7	Adiabatic invariants	45	3.13	Plasma rotation	128
2.8	Collisions	47	3.14	Current drive	131
2.9	Kinetic equations	51	4	Confinement	143
2.10	Fokker–Planck equation	53	4.1	Tokamak confinement	144
2.11	Gyro-averaged kinetic equations	54	4.2	Resistive plasma diffusion	146
2.12	Fokker–Planck equation for a plasma	56	4.3	Diffusion in a cylinder	148
2.13	Fokker–Planck coefficients for Maxwellian distributions	58	4.4	Pfirsch–Schlüter current	149
2.14	Relaxation processes	61	4.5	Pfirsch–Schlüter diffusion	152
2.15	Collision times	65	4.6	Banana regime transport	153
2.16	Resistivity	66	4.7	Plateau transport	161
2.17	Runaway electrons	68	4.8	Ware pinch effect	163
2.18	Electromagnetism	71	4.9	Bootstrap current	166
			4.10	Neoclassical resistivity	168

4.11	Ripple transport	169	6.4	Energy principle	309
4.12	Confinement modes and scaling expressions	175	6.5	Tokamak instabilities	311
4.13	H-modes	180	6.6	Large aspect-ratio tokamak	312
4.14	Internal transport barriers	183	6.7	Kink instability	313
4.15	Scaling laws	185	6.8	Tearing modes	317
4.16	Transport coefficients	190	6.9	Tearing stability	323
4.17	Fluctuations	193	6.10	Internal kink	328
4.18	Turbulence-induced transport	197	6.11	Resistive $m = 1$ modes	331
4.19	Radial electric field shear and transport	205	6.12	Localized modes	335
4.20	Candidate modes	208	6.13	Ballooning modes	336
4.21	Turbulence simulations	212	6.14	Ballooning stability	339
4.22	Critical gradients, edge transport barrier and pedestal	216	6.15	Axisymmetric modes	341
4.23	Impurity transport	220	6.16	Resistive wall mode	342
4.24	Experimental discoveries	224	6.17	Toroidal Alfvén eigenmodes	343
4.25	Radiation losses	228	6.18	β limit	347
4.26	Impurity radiation	230			
5	Heating	237	7	Instabilities	355
5.1	Heating	238	7.1	Instabilities	356
5.2	Ohmic heating	240	7.2	Magnetic islands	358
5.3	Neutral beam injection	244	7.3	Tearing modes	360
5.4	Neutral beam heating	246	7.4	Mirnov instabilities	366
5.5	Neutral beam production	253	7.5	Current penetration	368
5.6	Radio frequency heating	258	7.6	Sawtooth oscillations	369
5.7	Physics of radio frequency heating	261	7.7	Disruptions	378
5.8	Ion cyclotron resonance heating	270	7.8	Causes of disruptions	380
5.9	Lower hybrid resonance heating	286	7.9	Physics of disruptions	386
5.10	Electron cyclotron resonance heating	290	7.10	Mode locking	394
6	Mhd stability	303	7.11	Error field instability	398
6.1	Mhd stability	304	7.12	Vertical instability	400
6.2	Stability theory	306	7.13	Ergodicity	401
6.3	Growth rates	307	7.14	Fishbone instability	403
			7.15	Alfvén instability	406
			7.16	MARFEs	413
			7.17	ELMs	415
			7.18	Operational overview	419
			8	Microinstabilities	425
			8.1	Microinstabilities	426
			8.2	Electron drift wave	428

8.3	Passing particle instabilities	430	11 Tokamak experiments	591
8.4	Trapped particle instabilities	438	11.1 Tokamak experiments	592
8.5	Micro-tearing modes	443	11.2 T-3	593
			11.3 ST	594
			11.4 JFT-2	596
9 Plasma-surface interactions	451		11.5 Alcator A, Alcator C, and Alcator C-Mod	597
9.1	Plasma-surface interactions	452	11.6 TFR	601
9.2	The plasma sheath	454	11.7 DITE	602
9.3	Limiters	458	11.8 PLT	604
9.4	The scrape-off layer	460	11.9 T-10	605
9.5	Recycling and tritium inventory	463	11.10 ISX	606
9.6	Atomic and molecular processes	470	11.11 FT and FT Upgrade	606
9.7	Wall conditioning	474	11.12 Doublet-III	609
9.8	Sputtering	478	11.13 ASDEX	610
9.9	Choice of materials	485	11.14 TEXT	612
9.10	Arcing	488	11.15 TEXTOR	613
9.11	Divertors	490	11.16 Tore Supra	616
9.12	Heat flux, evaporation, and heat transfer	504	11.17 COMPASS	619
			11.18 RTP	621
			11.19 START	623
			11.20 MAST	624
			11.21 NSTX	626
			11.22 TCV	627
			11.23 Tokamak parameters	630
10 Diagnostics	509		12 Large Tokamaks	633
10.1	Tokamak diagnostics	510	12.1 Large Tokamaks	634
10.2	Magnetic measurements	514	12.2 TFTR	637
10.3	Interferometry	522	12.3 JET	657
10.4	Reflectometry	527	12.4 JT-60/JT-60U	689
10.5	Measurement of electron temperature	530	12.5 DIII-D	710
10.6	Ion temperature and the ion distribution function	540	12.6 ASDEX Upgrade	736
10.7	Radiation from plasmas	546	12.7 EAST	751
10.8	Total radiation measurements	556	12.8 KSTAR	752
10.9	Tomography	559		
10.10	Langmuir probes	561	13 The future	761
10.11	Measurements of fluctuations	567	13.1 Status	762
10.12	Determination of the q -profile	574	13.2 Strategy	763
10.13	Fusion product measurements	577	13.3 Reactor requirements	764

13.4	Reactor power balance	767
13.5	ITER	772
13.6	ITER—Performance assessment	777
13.7	Prospects	782
14	Appendix	785
14.1	Vector relations	786
14.2	Differential operators	786
14.3	Units—conversions	788
14.4	Physical constants	789
14.5	Coulomb logarithm	789
14.6	Collision times	793

14.7	Lengths	795
14.8	Frequencies	797
14.9	Velocities	798
14.10	Resistivity	799
14.11	Chang–Hinton formula for χ_i	801
14.12	Bootstrap current	802
14.13	Confinement scaling relations	803
14.14	Plasma shape	805
14.15	Formulae	805
14.16	Symbols	806
	Index	809
