Presentation

1	Introduction	3
2	A Few Problems	7
2.1	Breaking a Mesh	7
2.2	Forging Alliances	9
2.3	Are Symmetries Frequent?	12
2.4	Large Matchings on a Torus	14
2.5	Homomorphism Dualities	15

The Theory

3	Prolegomena	21
3.1	Graphs	21
3.2	Average Degree and Minimum Degree	22
3.3	Graph Degeneracy and Orientations	23
3.4	Girth	27
3.5	Minors	30
3.6	Width, Separators and Expanders	33
3.7	Homomorphisms	39
3.8	Relational Structures and First-Order Logic	46
3.9	Ramsey Theory	52
3.10	Graph Parameters	54
3.11	Computational complexity	56
	Exercises	59
4	Measuring Sparsity	61
4.1	Basic Definitions	61
4.2	Shallow Minors	62

4.3	Shallow Topological Minors	65
4.4	Grads and Top-Grads	66
4.5	Polynomial Equivalence of Grads and Top-Grads	68
4.6	Relation with Chromatic Number	77
4.7	Stability of Grads by Lexicographic Product	80
4.8	Shallow Immersions	83
4.9	Generalized Coloring Numbers	86
	Exercises	88
5	Classes and Their Classification	89
5.1	Operations on Classes and Resolutions	91
5.2	Logarithmic Density and Concentration	97
5.3	Classification of Classes by Clique Minors	100
5.4	Classification by Density—Trichotomy of Classes	102
5.5	Classes with Bounded Expansion	104
5.6	Classes with Locally Bounded Expansion	107
5.7	A Historical Note on Connection to Model Theory	108
5.8	Classes of Relational Structures	110
	Exercises	113
6	Bounded Height Trees and Tree-Depth	115
6.1	Definitions and Basic Properties	115
6.2	Tree-Depth, Minors and Paths	117
6.3	Compact Elimination Trees and Weak-Coloring	122
6.4	Tree-Depth, Tree-Width and Vertex Separators	123
6.5	Centered Colorings	125
6.6	Cycle Rank	128
6.7	Games and a Min-Max Formula for Tree-Depth	130
6.8	Reductions and Finiteness	132
6.9	Ehrenfeucht-Fraïssé Games	136
6.10	Well Quasi-orders	136
6.11	The Homomorphism Quasi-order	140
	Exercises	142
7	Decomposition	145
7.1	Motivation, Low Tree-Width and Low Tree-Depth	145
7.2	Low Tree-Depth Coloring and p -Centered Colorings	153
7.3	Transitive Fraternal Augmentation	154
7.4	Fraternal Augmentations of Graphs	158
7.5	The Weak-Coloring Approach	168
	Exercises	173

8	Independence	175
8.1	How Wide is a Class?	175
8.2	Wide Classes	179
8.3	Finding d -Independent Sets in Graphs	180
8.4	Quasi-Wide Classes	185
8.5	Almost Wide Classes	188
8.6	A Nice (Asymmetric) Application	189
	Exercises	194
9	First-Order CSP, Limits and Homomorphism Dualities	195
9.1	Introduction	195
9.2	Homomorphism Dualities and the Functor U	197
9.3	Metrics on the Homomorphism Order	203
9.4	Left Limits and Countable Structures	212
9.5	Right Limits and Full Limits	217
	Exercises	224
10	Preservation Theorems	227
10.1	Introduction	227
10.2	Primitive Positive Theories and Left Limits	228
10.3	Theories and Countable Structures	233
10.4	Primitive Positive Theories Again	235
10.5	Quotient Metric Spaces	237
10.6	The Topological Preservation Theorem	240
10.7	Homomorphism Preservation Theorems	242
10.8	Homomorphism Preservation Theorems for Finite Structures	246
	Exercises	251
11	Restricted Homomorphism Dualities	253
11.1	Introduction	253
11.2	Classes with All Restricted Dualities	254
11.3	Characterization of Classes with All Restricted Dualities by Distances	254
11.4	Characterization of Classes with All Restricted Dualities by Local Homomorphisms	256
11.5	Restricted Dualities in Bounded Expansion Classes	260
11.6	Characterization of Classes with All Restricted Dualities by Reorientations	262
11.7	Characterization of Classes with All Restricted Dualities by Subdivisions	264

11.8	First-Order Definable H -Colorings	265
11.9	Consequences and Related Problems	269
	Exercises	274
12	Counting	277
12.1	Introduction	277
12.2	Generalized Sunflowers	281
12.3	Counting Patterns of Bounded Height in a Colored Forest	283
12.4	Counting in Graphs with Bounded Tree Depth	289
12.5	Counting Subgraphs in Graphs	292
12.6	Counting Subgraphs in Graphs in a Class	293
	Exercises	296
13	Back to Classes	299
13.1	Resolutions	299
13.2	Parameters	302
13.3	Nowhere Dense Classes	304
13.4	Bounded Expansion Classes	305
13.5	Bounded Tree-Depth Classes	306
13.6	Remarks on Structures	308
Applications		
14	Classes with Bounded Expansion – Examples	313
14.1	Random Graphs (Erdős-Rényi Model)	314
14.2	Crossing Number	319
14.3	Queue and Stack Layouts	321
14.4	Queue Number	322
14.5	Stack Number	327
14.6	Non-repetitive Colorings	328
	Exercises	337
15	Some Applications	339
15.1	Finding Matching and Paths	339
15.2	Burr-Erdős Conjecture	350
15.3	The Game Chromatic Number	352
15.4	Fiedler Value of Classes with Sublinear Separators	355
16	Property Testing, Hyperfiniteness and Separators	363
16.1	Property Testing	363
16.2	Weakly Hyperfinite Classes	368
16.3	Vertex Separators	369
16.4	Sub-exponential ω -Expansion	373
	Exercises	379

17	Core Algorithms	381
17.1	Data Structures and Algorithmic Aspects	381
17.2	p-Tree-Depth Coloring	386
17.3	Computing and Approximating Tree-Depth	390
17.4	Counting Homomorphisms to Graphs with Bounded Tree-Depth	392
17.5	First-Order Cores of Graphs with Bounded Tree-Depth	393
	Exercises	396
18	Algorithmic Applications	397
18.1	Introduction	397
18.2	Truncated Distances	399
18.3	The Subgraph Isomorphism Problem and Boolean Queries ...	400
18.4	The Distance-d Dominating Set Problem	402
18.5	General First-Order Model Checking	404
18.6	Counting Versions of Model Checking	407
	Exercises	410
19	Further Directions	411
20	Solutions and Hints for some of the Exercises	417
	References	431
	Index	451
