

Content

Preface	5
AIMS OF THE PROJECTS	
A study of grass vegetation in clear-cut areas. Objectives and aims of the projects - Fiala K.	7
CHARACTERISTICS OF STUDIED SITES	
Basic characteristics of studied sites in the Moravian-Silesian Beskydy Mts. - Fiala K., Tůma I., Jandák J., Zelená V.	13
Amount and chemical composition of wet bulk depositions on deforested sites in the Beskydy Mts. in 1995 - Fiala K., Tůma I., Hrdlička P.	29
DIVERSITY OF GRASS COMMUNITIES	
Main types of grass communities of deforested areas in the Beskydy Mts. - Zelená V.	39
GROWTH AND BIOMASS PRODUCTION	
The growth of <i>Calamagrostis villosa</i> and <i>C. arundinacea</i> on different habitats in the Beskydy Mts. - Holub P.	45
Contribution to the ecology of <i>Calamagrostis arundinacea</i> - example of results from studies performed in the Moravian-Silesian Beskydy Mts. - Jakrlová J.	69
Variability of aboveground production of <i>Calamagrostis villosa</i> in localities exposed to immissions in the region of the Beskydy Mts. - Jakrlová J.	75
Variation in total underground biomass, root growth rate and rhizome formation in grass stands on deforested sites - Fiala K.	83
Estimation of annual production and turnover rate of underground plant biomass in <i>Calamagrostis villosa</i> and <i>Avenella flexuosa</i> stands - Fiala K.	91
Seasonal variation in carbohydrates in <i>Calamagrostis arundinacea</i> and <i>C. villosa</i> rhizomes - Holub P.	97
The estimation of the nitrogen use efficiency of <i>Calamagrostis villosa</i> on different habitats in the Beskydy Mts. - Holub P.	105
Growth of <i>Calamagrostis arundinacea</i> tufts on different habitats in the Beskydy Mts. - Tůma I.	111
Basic characteristics of photosynthesis, respiration and mineral nutrient uptake of <i>Calamagrostis villosa</i> - Gloser J., Gloser V., Polčák Z.	117

Modeling of wild grass production on deforested mountainous areas: Parametrization of model MACROS - Barták M., Pitsmaus P.	123
---	-----

DECOMPOSITION PROCESSES

Cellulose decomposition rates in grass and forest stands in the Beskydy Mts. - Tůma I.	129
--	-----

Litter decomposition in <i>Calamagrostis arundinacea</i> and <i>C. villosa</i> stands in the Beskydy Mts. - Tůma I.	135
---	-----

ACCUMULATION AND RELEASE OF NUTRIENTS

Mineral composition and accumulation of nutrients in plant biomass of grass stands on deforested sites - Fiala K., Jakrllová J.	145
---	-----

Element release in the first year of litter decomposition of grass stands on deforested sites in the Beskydy Mts. - Tůma I.	157
---	-----

Mineralization of soil organic nitrogen after deforestation - Záhora J.	165
--	-----

CHANGES IN SOIL PROPERTIES

Some chemical properties of soil on the clearings in the region Beskydy Mts. - Ježíková M.	173
--	-----

Seasonal dynamics of pH, Ca, Mg and organic matter contents in soil of grass and forest stands in a region exposed to immissions - Zelená V., Holub P., Tůma I.	185
--	-----

Microbial biomass in soils of immission barrens - Pávková A., Tesařová M.	195
--	-----

Seasonal pattern and vertical distribution of vesicular-arbuscular mycorrhizas associated with three grass species grown in acid soil - Baláž M.	201
--	-----

Changes in the contents of exchangeable cations in upper soil layers of deforested sites after the removal of grass cover (<i>Calama- grostis villosa</i> , <i>C. arundinacea</i>) - Sedláková I.	211
---	-----

Soil nitrogen concentration in grass stands on deforested sites in the Beskydy Mts. - Fiala K.	223
--	-----

BIBLIOGRAPHY

Bibliography (Publications of the research teams related to the research topic)	233
--	-----
