Introduction	8
Chapter 1: Rivers, Channels, Floodplain Lakes	11
1.1 Theory of Fluvial System	12
1.1.1 The Physical Bases of Fluvial Systems and Three Zones Defined by Schumm	12
1.1.2 Hydrosystem and Integration of Biologic Components	14
1.1.3 Spatial and Temporal Variability	17
1.1.3.1 Season Fluctuation and Variability	17
1.1.3.2 Permanent Changes	17
1.1.3.3 The Scale Imposition	18
1.2 River Channel Types	20
1.2.1 Types of Channel Patterns	20
1.2.2 The Creation of Floodplain Lakes	32
1.2.2.1 The Channel Stability	32
1.2.2.2 Cutoff Avulsion	33
1.3 River Processes and Basic Principles of Floodplain Lake Dynamics	35
1.3.1 Grain Size and Sediment Transport	35
1.3.1.1 Suspended Sediment	35
1.3.1.2 Coarse Sediment	37
1.3.2 Hydraulic Basis	37
1.3.3 Sediment Transport and Deposition of Fine Material	41
1.3.3.1 Suspended Sediment Transport Rate	41
1.3.3.2 Deposition	41
1.4 Floodplain Lakes	44
1.4.1 The Dynamic System	44
1.4.2 The Human Pressure	45
1.4.3 Restoration Issues	46
1.5 Conclusions	52
1.5.1 New Challenges in Fluvial Geomorphology	52
1.5.2 Conclusions	54
Chapter 2: Close range photogrammetry with UAV	63
Introduction	64
2.1 Current status of the field concerned	66
2.1.1 Photogrammetry	66
2.1.1.1 Mathematical aspects of stereophotogrammetry	67
2.1.2 History of UAV	72
2.1.3 UAV platforms	72

2.1.4 UAV photogrammetry	77
2.1.5 Application areas of UAV systems	78
2.2 UAV technology deployment concept	79
2.2.1 Concept design	79
2.2.2 The concept	79
2.3 Resources of UAV photogrammetry	81
2.3.1 Aerial carrier	81
2.3.1.1 Permitted frequencies	81
2.3.1.2 PIXY paraglider model	82
2.3.1.3 HexaKopter XL	83
2.3.2 Camera and its calibration	85
2.3.2.1 Camera	85
2.3.2.2 Calibration	85
2.3.3 Personnel and knowledge	89
2.4 Legislation for the operation of UAVS	91
2.4.1 Operation of unmanned systems	91
2.4.2 Airspace	91
2.5 Flight plan and preparation for imaging	94
2.5.1 Checking the site and the permit to fly	94
2.5.2 Defining the parameters for imaging	96
2.5.3 Waypoints and flight axes	97
2.5.4 Meteorological and lighting conditions	101
2.5.4.1 Meteorological conditions	101
2.5.4.2 Lighting conditions	104
2.6 Field work and imaging flight	109
2.6.1 Ground control points	109
2.6.1.1 Types of ground control points	109
2.6.1.2 Distribution and number of ground control points	111
2.6.1.3 Measuring ground control points	112
2.6.2 Camera setup	113
2.6.2.1 Exposure parameters	114
2.6.2.2 Camera focus	115
2.6.3 Imaging flight	116
2.6.3.1 Pre-flight preparation	116
2.6.3.2 Launch	117
2.6.3.3 Flight	118
2.6.3.4 Landing	119
2.6.3.5 Data check	120

Chapter 3: Case studies	125
• Floodplain degradation and possible rehabilitation along the Hungarian Drava section	127
• Floodway zoning and flood modelling using remote sensing and DEM along the lower Hungarian Drava section	177
• Assessment of a water recharge project into an oxbow of the Drava floodplain	201
• Application of GIS and aerial photography in geomorphological studies, Małopolska Vistula River Gap, Poland	221
• Soil erosion mapping with the aid of aerial photographs tested at Pastovce site, Ipeľská pahorkatina	247
For Conclusion: Three Year Project Overview	269
Annexes	271
