General characteristics of the Bohemian Massif	5
The Teplá-Barrandian region	8
1. Týřovice — transgression of the Middle Cambrian on the Proterozoic	10
The Krušné hory-Thuringian region	10
2. Kadaň — neovolcanic and crystalline rocks in the river Ohře valley	12
3. Měděnec — orthogneiss of the Krušné hory crystalline complex	13
4. Karlovy Vary-Březová — granites of the Karlovy Vary massif	14
5. Bečov — contact of granodiorite with crystalline schists	14
6. Horní Bříza — kaolin deposit, Lower Stephanian	14
7. Koterov — Proterozoic pillow lavas	15
The region of the Moldanubian elevation	16
8. Blatná — granodiorites of the Central Bohemian Pluton	20
9. Zrcadlova Huť — granulites of the Blanský les Mts.	21
10. Český Krumlov — marbles of the Varied Group of the Moldanubicum	21
11. Mrákotín and Řáská — andalusite-bearing granite up to adamellite	22
12. Vanov — cordierite-biotite migmatites	22
13. Mohelná — serpentinites and granulites	23
Paleozoic in Moravia in the region of the Moravian Karst	23
14. Punkevní jeskyně, Macocha — Devonian of the Moravian Karst	24
General characteristics of the West Carpathians	25
The Malé Karpaty Mountains (Little Carpathians)	28
15. Devínska cesta — granitoid rocks of the Bratislava massif	30
16. The Devín Castle Hill — Mesozoic of the Envelope unit	30
17. Pezinok — the Pezinok-Pernek mica-schist zone	31
18. Harmónia-Dolínkovský vrch — Harmónia Group	31
19. Piešťany — thermal spa	32
20. Piešťany-Banka — Piešťany Beds, Pannonian	32
21. Trenčín Castle — rock-wall of the Reifling Limestones of the Choč nappe	33
The Pieniny Klippen Belt	33
22. Dam at Nosice — the Klippen envelope	34
23. Manín — Klippen Belt, Hettangian—Cenomanian	34

The Malá Fatra Mountains	35
24. Vrátna dolina — thrust plane of the Choč nappe and transgression of the Paleogene	35
25. Brestová — thrust plane of the Choč nappe	36
The Nízke Tatry and Starohorské pohorie Mountains	37
26. Korytnica — spa	39
27. Ulmanka — crystalline rocks of the Staré hory window	39
28. Bystrá dolina — primorogenic migmatites up to migmatized orthogneisses	40
29. Trangoška — Mesozoic of the Nízke Tatry Envelope unit	40
30. Osrblie — Lower Triassic epiquartzites	40
31. Čertovica — the Čertovica line.	41
32. Nižná Boca — contact of the quartzites of the Envelope unit with the crystalline complex of the Dumbier core	41
The Vysoké Tatry Mountains	42
33. Jamnická and Ráčkova dolina — section through the Vysoké Tatry crystalline complex	43
34. Ráčkova dolina — section through the Vysoké Tatry crystalline complex	46
35. Tichá dolina — section through the Tomanowa Group and crystalline rocks of the core of Czerwone wierchy and Giewont folds	47
