|                                                                                   |            |
|-----------------------------------------------------------------------------------|------------|
| <b>1 INTRODUCTION</b>                                                             | <b>1</b>   |
| <b>2 THE ELASTODYNAMIC EQUATION AND ITS SIMPLE SOLUTIONS</b>                      | <b>7</b>   |
| 2.1. Linear Elastodynamics                                                        | 8          |
| 2.2. Elastic Plane Waves                                                          | 19         |
| 2.3. Elastic Plane Waves Across a Plane Interface                                 | 37         |
| 2.4. High-Frequency Elastic Waves in Smoothly Inhomogeneous Media                 | 53         |
| 2.5. Point-Source Solutions. Green Functions                                      | 73         |
| 2.6. Application of Green Functions to the Construction of More General Solutions | 89         |
| <b>3 SEISMIC RAYS AND TRAVEL TIMES</b>                                            | <b>99</b>  |
| 3.1. Ray Tracing Systems in Inhomogeneous Isotropic Media                         | 102        |
| 3.2. Rays in Laterally Varying Layered Structures                                 | 117        |
| 3.3. Ray Tracing                                                                  | 124        |
| 3.4. Analytical Ray Tracing                                                       | 129        |
| 3.5. Ray Tracing in Curvilinear Coordinates                                       | 137        |
| 3.6. Ray Tracing in Inhomogeneous Anisotropic Media                               | 148        |
| 3.7. Ray Tracing and Travel-Time Computations in 1-D Models                       | 160        |
| 3.8. Direct Computation of Travel Times and/or Wavefronts                         | 178        |
| 3.9. Perturbation Methods for Travel Times                                        | 189        |
| 3.10. Ray Fields                                                                  | 199        |
| 3.11. Boundary-Value Ray Tracing                                                  | 217        |
| 3.12. Surface-Wave Ray Tracing                                                    | 228        |
| <b>4 DYNAMIC RAY TRACING. PARAXIAL RAY METHODS</b>                                | <b>234</b> |
| 4.1. Dynamic Ray Tracing in Ray-Centered Coordinates                              | 237        |
| 4.2. Hamiltonian Approach to Dynamic Ray Tracing                                  | 259        |
| 4.3. Propagator Matrices of Dynamic Ray Tracing Systems                           | 278        |
| 4.4. Dynamic Ray Tracing in Isotropic Layered Media                               | 289        |
| 4.5. Initial Conditions for Dynamic Ray Tracing                                   | 310        |
| 4.6. Paraxial Travel-Time Field and Its Derivatives                               | 322        |
| 4.7. Dynamic Ray Tracing in Cartesian Coordinates                                 | 331        |
| 4.8. Special Cases. Analytical Dynamic Ray Tracing                                | 341        |

|                                                                                    |     |
|------------------------------------------------------------------------------------|-----|
| 4.9. Boundary-Value Ray Tracing for Paraxial Rays                                  | 348 |
| 4.10. Geometrical Spreading in a Layered Medium                                    | 356 |
| 4.11. Fresnel Volumes                                                              | 372 |
| 4.12. Phase Shift Due to Caustics. KMAH Index                                      | 380 |
| 4.13. Dynamic Ray Tracing Along a Planar Ray. 2-D Models                           | 384 |
| 4.14. Dynamic Ray Tracing in Inhomogeneous Anisotropic Media                       | 400 |
| <b>5 RAY AMPLITUDES</b>                                                            | 417 |
| 5.1. Acoustic Case                                                                 | 419 |
| 5.2. Elastic Isotropic Structures                                                  | 449 |
| 5.3. Reflection/Transmission Coefficients for Elastic Isotropic Media              | 477 |
| 5.4. Elastic Anisotropic Structures                                                | 504 |
| 5.5. Weakly Dissipative Media                                                      | 542 |
| 5.6. Ray Series Method. Acoustic Case                                              | 549 |
| 5.7. Ray-Series Method. Elastic Case                                               | 567 |
| 5.8. Paraxial Displacement Vector. Paraxial Gaussian Beams                         | 582 |
| 5.9. Validity Conditions and Extensions of the Ray Method                          | 607 |
| <b>6 RAY SYNTHETIC SEISMOGRAMS</b>                                                 | 621 |
| 6.1. Elementary Ray Synthetic Seismograms                                          | 622 |
| 6.2. Ray Synthetic Seismograms                                                     | 630 |
| 6.3. Ray Synthetic Seismograms in Weakly Dissipative Media                         | 639 |
| 6.4. Ray Synthetic Particle Ground Motions                                         | 643 |
| <b>APPENDIX A FOURIER TRANSFORM, HILBERT TRANSFORM,<br/>AND ANALYTICAL SIGNALS</b> | 661 |
| A.1. Fourier Transform                                                             | 661 |
| A.2. Hilbert Transform                                                             | 663 |
| A.3. Analytical Signals                                                            | 664 |
| <i>References</i>                                                                  | 667 |
| <i>Index</i>                                                                       | 697 |
