Preface	xv
Acknowledgements	xvi
Section I Investigating health services and health: the scope of research	1
1 Evaluating health services: multidisciplinary collaboration	5
Introduction	6
Health services research	6
The assessment of quality	7
Audit	8
Medical audit, clinical audit and quality assurance	8
Evaluation	9
Structure, process and outcome	10
Appropriateness and inappropriateness	11
Outcome	12
Summary of main points	15
Key questions	15
Key terms	16
Recommended reading	16
2 Social research on health: sociological and psychological concepts and approaches	17
Introduction	18
Sociological and psychological research on health	18
1 Health and illness	19
The bio-medical model	19
The social model of health	20
Lay definitions of health	20

Lay theories of illness	21
Variations in medical and lay perspectives	22
2 Social factors in illness and responses to illness	23
Social variations in health: structural inequalities	23
Psycho-social stress and responses to stress	24
Stigma, normalisation and adjustment	27
The Sick Role and illness behaviour	29
3 Models of health behaviour	33
Health lifestyles	33
Health behaviour	34
Models of health-related actions	35
4 Health-related quality of life	38
Theoretical influences on measurement	39
5 Interactions between health professionals and patients	41
Communication	41
Patients' evaluations of health care	42
Summary of main points	51
Key questions	53
Key terms	53
Recommended reading	53
3 Health needs and their assessment: demography and epidemiology	54
<i>with Ian Rees Jones</i>	
Introduction	55
1 The assessment of health needs	55
Health needs	55
The need for health and the need for health care	56
Methods of assessing health needs	59
The role of epidemiological and demographic research	62
2 Epidemiology	63
The role of epidemiology	63
Epidemiological research	64
Methods of epidemiology	66
Assessing morbidity, mortality, incidence and prevalence	73
3 The role of demography	77
Demographical methods in relation to assessing need	78
Rates: births and deaths	79
The need to standardise	80
Analyses of survival	83
Summary of main points	86
Key questions	87

Key terms	87
Recommended reading	88
4 Costing health services: health economics with Ian Rees Jones	89
Introduction	90
Health economics	90
Demand, utility and supply	92
Economic appraisal	93
Cost minimisation	94
Cost-effectiveness	94
Cost-benefit analysis	95
Marginal cost	96
Complete costs	96
Event pathways	97
Opportunity cost	98
Discounting	100
Cost-utility analysis	100
Cost-utility analysis and economic valuations of health	101
Costing health services	107
Study methods used for costings	111
Summary of main points	112
Key questions	113
Key terms	113
Recommended reading	113

Section II The philosophy, theory and practice of research 115

5 The philosophical framework of measurement	117
Introduction	118
The philosophy of science	118
Paradigms	119
Objectivity and value freedom	119
Deductive and inductive approaches	120
The survival of hypotheses and paradigm shifts	124
Theoretical influences on social research methods	125
Social science and grounded theory	125
Positivism	126
Phenomenology	128
Choice of methods	130
Summary of main points	131
Key questions	132
Key terms	132
Recommended reading	132

6 The principles of research	133
Introduction	134
Searching the literature	134
Literature reviews	136
Meta-analyses	136
Rigour	138
Aims, objectives and hypotheses	138
Concepts and theories	139
Research proposals	141
Research design and research methods	143
Selection of measurement instruments	144
Level of data and statistical techniques	144
Reliability and validity	147
Threats to reliability and validity	153
Ethics and ethical committees	156
Dissemination	159
Summary of main points	160
Key questions	161
Key terms	162
Recommended reading	162
Section III Quantitative research: sampling and research methods	163
7 Sample size and sampling for quantitative research	165
Introduction	166
1 Calculation of sample size, statistical significance and sampling	166
The sampling unit	166
Calculation of sample size and statistical power	167
Testing hypotheses, statistical significance, the null hypothesis	169
Type I and type II errors	170
One- or two-sided hypothesis testing	172
Statistical, social and clinical significance	173
Sampling frames	174
Sampling	176
Confidence intervals and the normal distribution	177
External validity of the sample results	182
2 Methods of sampling	183
Random sampling	183
Non-random sampling: quota sampling	186
Sampling for qualitative research	187
Sampling for telephone interviews	188

Summary of main points	189
Key questions	191
Key terms	191
Notes	191
Recommended reading	192
8 Quantitative research: surveys	193
Introduction	194
1 Survey methods	194
The survey	194
Descriptive and analytic surveys	195
Retrospective (<i>ex post facto</i>), cross-sectional surveys	197
Prospective, longitudinal surveys	197
Cross-sectional and longitudinal cohort studies	200
Triangulated research methods and surveys	201
2 Methods of analysing change in longitudinal surveys	202
Analysing change	202
Sample attrition and analysing change	209
Stopping rules and analysis of interim results	212
Summary of main points	212
Key questions	213
Key terms	213
Recommended reading	214
9 Quantitative research: experiments and other analytic methods of investigation	215
Introduction	216
The experimental method	216
Internal and external validity	219
Reducing bias in participants and the investigating team	223
Blind experiments	224
The randomised controlled trial in health care evaluation	225
Other analytic methods of investigation	228
Before-after study with non-randomised control group	231
After-only study with non-randomised control group	231
Time series studies using different samples (historical controls)	232
Geographical comparisons	232
People acting as own controls	233
Within-person, controlled site study	233
Threats to the validity of causal inferences in other analytic studies	233
Summary of main points	234
Key questions	235

Key terms	235
Recommended reading	236
10 Sample selection and group assignment methods in experiments and other analytic methods	237
Introduction	238
Random sampling	238
Convenience and purposive sampling	238
Volunteers	239
Type of investigation and type of sampling frame	239
Response rates: experiments and other analytical studies	240
Ensuring similarity in group characteristics: random allocation	241
Other allocation methods: cross-over methods	247
Methods of group design for improving the basic RCT	248
Common methods of controlling to obtain equivalence in non-randomised studies	250
Summary of main points	252
Key questions	253
Key terms	253
Recommended reading	253
Section IV The tools of quantitative research	255
11 Data collection methods in quantitative research: questionnaires, interviews and their response rates	257
Introduction	258
Structured and semi-structured questionnaires	258
Postal questionnaires and self-administration	259
Structured and semi-structured interviews	260
Non-response	263
Item non-response	269
Summary of main points	271
Key questions	271
Key terms	272
Recommended reading	272
12 Questionnaire design	273
Introduction	274
Planning	274
Piloting	275
Questionnaire layout	275
The covering letter	277
Question form, order and wording	278

Rules for form	278
Scores	286
Constructing additional items and scales	287
Attitude measurement scales	288
Rules for order and wording	294
Rules for questions by type of topic	300
Checking the accuracy of responses	306
Translating an instrument and cultural equivalence	307
Summary of main points	308
Key questions	309
Key terms	309
Recommended reading	309
13 Techniques of survey interviewing	310
Introduction	311
Types of interview	311
The interviewer	311
Interviewer handbooks	313
Sampling by interviewers	315
Interviewer training	316
Interviewer bias	317
Persistence in contacting respondents	318
Approaching respondents	319
Motivating people to respond	320
Third parties and distractions	322
Beginning the interview	323
Rules for structured interviewing	324
Interviewing techniques	326
The end of the interview	330
Recording responses	331
Debriefing	332
Quality control	332
Summary of main points	333
Key questions	333
Key terms	334
Recommended reading	334
14 Preparation of quantitative data for coding and analysis	335
Introduction	336
Coding	336
Coding transfer sheets	338
The code book	339
Numerical values for codes	340
Coding open questions	341
Coding closed questions	343

Checking returned questionnaires	343
Data entry on to computer	344
Cleaning the data	345
Checking for bias in the analyses	346
Missing values and data checks	346
Computer packages for the analysis of quantitative data	347
The analysis	348
Summary of main points	349
Key questions	350
Key terms	350
Recommended reading	350
Section V Qualitative and combined research methods, and their analysis	351
15 Unstructured and structured observational studies	355
Introduction	356
Observation	358
Participant observation	359
Gaining access	360
Hardware: video- and audiotapes	361
Establishing validity and reliability	362
Observation and triangulated methods	364
Structured observations: what to record	364
Time sampling	366
Recording observed (non-verbal) body language	366
Unstructured observations	367
Combining structured and unstructured recordings	368
Theoretical analysis of observational data	369
Categorisation of observational data	371
Narratives	373
Audio-observation: conversation sampling	373
Recording and analysing verbal communication	374
Summary of main points	375
Key questions	376
Key terms	376
Recommended reading	376
16 Unstructured interviewing and focus groups	377
Introduction	378
1 Unstructured interviews	378
Types of unstructured, in-depth interview	378
In-depth interviewing: sample selection and size	379
The process of the interview	381

Techniques of in-depth interviewing	382
Analysis and presentation of in-depth interview data	385
Categorising qualitative data: content analysis	387
Rules for coding	389
Computer programs for analysing qualitative data	391
Narrative format	392
2 Focus groups	394
Focus group interviews	394
Group composition	395
Appropriate topics for focus groups	395
Methods of analysis	398
Summary of main points	399
Key questions	400
Key terms	400
Recommended reading	401
17 Other methods using both qualitative and quantitative approaches: case studies, consensus methods, action research and document research	402
Introduction	403
1 Case studies	403
The study of single or small series of cases	403
Examples of case studies	404
The analysis	406
2 Consensus methods	406
Methods for establishing and developing consensus	406
Delphi technique	407
Consensus development panels	407
Nominal group process	407
The analysis	409
3 Action research and rapid appraisal techniques	410
Action research	410
Stages of action research	412
Rapid appraisal	414
4 Document research	415
Documents as sources of, or for, research	415
Types of documents	416
Authenticity, bias, error and interpretation	418
Types of document research	419
Analysis of documents	421
Diary methods	424
Analysis of diaries	427
Summary of main points	427
Key questions	428
