Preface	xii
Notation and Terminology	xiv
Chapter 1. Elementary Theory of Holomorphic Functions	1
1. Some basic properties of $\mathbb{C}$ -differentiable and holomorphic functions	2
2. Integration along curves	9
3. Fundamental properties of holomorphic functions	21
4. The theorems of Weierstrass and Montel	32
5. Meromorphic functions	36
6. The Looman-Menchoff theorem	43
Notes on Chapter 1	50
References: Chapter 1	51
Chapter 2. Covering Spaces and the Monodromy Theorem	53
1. Covering spaces and the lifting of curves	53
2. The sheaf of germs of holomorphic functions	55
3. Covering spaces and integration along curves	58
4. The monodromy theorem and the homotopy form of Cauchy's theorem	60
5. Applications of the monodromy theorem	64
Notes on Chapter 2	69
References: Chapter 2	69

Chapter 3. The Winding Number and the Residue Theorem	70
1. The winding number	70
2. The residue theorem	75
3. Applications of the residue theorem	81
Notes on Chapter 3	87
References: Chapter 3	87
 Chapter 4. Picard's Theorem	89
Notes on Chapter 4	97
References: Chapter 4	98
 Chapter 5. The Inhomogeneous Cauchy-Riemann Equation and Runge's Theorem	100
1. Partitions of unity	100
2. The equation $\frac{\partial u}{\partial \bar{z}} = \phi$	102
3. Runge's theorem	106
4. The homology form of Cauchy's theorem	115
Notes on Chapter 5	117
References: Chapter 5	118
 Chapter 6. Applications of Runge's Theorem	119
1. The Mittag-Leffler theorem	119
2. The cohomology form of Cauchy's theorem	123
3. The theorem of Weierstrass	126
4. Ideals in $\mathcal{H}(\Omega)$	131
Notes on Chapter 6	141
References: Chapter 6	142
 Chapter 7. The Riemann Mapping Theorem and Simple Connectedness in the Plane	144
1. Analytic automorphisms of the disc and of the annulus	144
2. The Riemann mapping theorem	148
3. Simply connected plane domains	150
Notes on Chapter 7	153
References: Chapter 7	154

Chapter 8. Functions of Several Complex Variables	156
Notes on Chapter 8	164
References: Chapter 8	165
 Chapter 9. Compact Riemann Surfaces	166
1. Definitions and basic theorems	166
2. Meromorphic functions	171
3. The cohomology group $H^1(\mathcal{U}, \mathcal{O})$	173
4. A theorem from functional analysis	176
5. The finiteness theorem	183
6. Meromorphic functions on a compact Riemann surface	185
Notes on Chapter 9	190
References: Chapter 9	191
 Chapter 10. The Corona Theorem	193
1. The Poisson Integral and the theorem of F. and M. Riesz	194
2. The corona theorem	204
Notes on Chapter 10	214
References: Chapter 10	215
 Chapter 11. Subharmonic Functions and the Dirichlet Problem	216
1. Semi-continuous functions	216
2. Harmonic functions and Harnack's principle	219
3. Convex functions	223
4. Subharmonic functions: Definition and basic properties	227
5. Subharmonic functions: Further properties and application to convexity theorems	236
6. Harmonic and subharmonic functions on Riemann surfaces	246
7. The Dirichlet problem	246
8. The Radó-Cartan theorem	255
Notes on Chapter 11	260
References: Chapter 11	261
 Appendix	263
 Subject Index	264
