

CONTENTS

1	INTRODUCTORY REMARKS	5
2	MOTIVATION AND OBJECTIVES	6
3	HYPOTHESIS	8
3.1	Work of fracture divided into two parts	8
3.2	Uniform amount of energy dissipated for fracture propagation	9
3.3	Note to origination of the hypothesis	10
4	PROPOSED METHODOLOGY – ReFraPro	11
4.1	ReFraPro procedure for determination of fracture properties	11
4.1.1	Structure of the ReFraPro application – The programme architecture	12
4.1.2	ReFraPro estimation of the nonlinear zone extent	12
5	CONCEPT OF VERIFICATION AND VALIDATION	16
5.1	Proposal of experimental campaigns	18
5.1.1	Component wedge splitting/bending fracture test	18
5.1.2	Modification of compact tension test	19
6	VALIDATION VIA AE AND RADIOGRAPHY	19
6.1	Acoustic emission scanning	20
6.1.1	Cumulative damage zone extent estimation	21
6.1.2	FPZ extent estimation	21
6.2	Radiographic imaging	22
6.2.1	Tested materials and specimens, test configuration and equipment	22
6.2.2	XRDD results	23
6.2.3	Modelling – FPZ reconstruction	24
6.3	Discussion on damage zone estimation validation	25
6.3.1	Acoustic emission technique	25
6.3.2	X-ray radiography	25
7	VERIFICATION OF FPZ EXTENT AND STRESS FIELD ESTIMATION	26
7.1	FPZ extent estimation	26
7.1.1	Physical discretization method – Rigid body spring networks modelling	26
7.1.2	Finite element method modelling	26
7.1.3	Numerical study	26
7.2	Approximation of stress field in cracked bodies	28
7.2.1	Numerical study	29
7.3	Discussion on FPZ estimation and stress field approximation	30
7.3.1	Verification of FPZ estimation	30
7.3.2	Verification of stress field approximation	31
8	CONCLUSIONS AND OUTLOOKS	32
8.1	Conclusions – FPZ and WRAP extent validation	32
8.1.1	Acoustic emission technique	32
8.1.2	Radiography	33
8.1.3	Nanoindentation	33

8.2	Conclusions – Crack-tip stress field and FPZ extent verification	33
8.2.1	Crack-tip stress field approximation and nonlinear zone width estimation	33
8.2.2	Numerical verification of FPZ extent	34
8.3	Outlooks	35
8.3.1	Analytical estimation of FPZ extent and the related energy dissipation	35
8.3.2	Experimental characterization of FPZ	36
