

Contents

Introduction

Simulations of the Folding of Proteins: A Historical Perspective	1
<i>Harold A. Scheraga</i>	

Molecular Simulations: Methodology

Coarse-Grained Protein Models in Structure Prediction	25
<i>Maciej Blaszczyk, Dominik Gront, Sebastian Kmiecik, Katarzyna Ziolkowska, Marta Panek, Andrzej Kolinski</i>	

Coarse-Grained Modeling of Protein Dynamics	55
<i>Sebastian Kmiecik, Jacek Wabik, Michal Kolinski, Maksim Kouza, Andrzej Kolinski</i>	

Physics-Based Modeling of Side Chain – Side Chain Interactions in the UNRES Force Field	81
<i>Mariusz Makowski</i>	

Modeling Nucleic Acids at the Residue-Level Resolution	109
<i>Filip Leonarski, Joanna Trylska</i>	

Modeling of Electrostatic Effects in Macromolecules	151
<i>Yury N. Vorobjev</i>	

Optimizations of Protein Force Fields	195
<i>Yoshitake Sakae, Yuko Okamoto</i>	

Enhanced Sampling for Biomolecular Simulations	249
<i>Workalemahu Berhanu, Ping Jiang, Ulrich H.E. Hansmann</i>	

Determination of Kinetics and Thermodynamics of Biomolecular Processes with Trajectory Fragments	269
<i>Alfredo E. Cardenas</i>	

Molecular Simulations: Applications

Mechanostability of Virus Capsids and Their Proteins in Structure-Based Models	295
<i>Marek Cieplak</i>	
Computer Modelling of the Lipid Matrix of Biomembranes	317
<i>Marta Pasenkiewicz-Gierula, Michał Markiewicz</i>	
Modeling of Membrane Proteins	357
<i>Dorota Latek, Bartosz Trzaskowski, Szymon Niewieczera, Przemysław Misztal, Krzysztof Młynarczyk, Aleksander Debinski, Wojciech Puławski, Shuguang Yuan, Sławomir Filipek</i>	
All-Atom Monte Carlo Simulations of Protein Folding and Aggregation	433
<i>Anders Irbäck, Sandipan Mohanty</i>	
Molecular Dynamics Studies on Amyloidogenic Protein	445
<i>Sylvia Rodziewicz-Motowidło, Emilia Sikorska, Justyna Iwaszkiewicz</i>	
Low-Frequency, Functional, Modes of Proteins: All-Atom and Coarse-Grained Normal Mode Analysis	483
<i>Adrien Nicolaï, Patrice Delarue, Patrick Senet</i>	
Use of Structural Database or Experimental Information in Modeling Protein Structure and Dynamics	
Bioinformatical Approaches to Unstructured/Disordered Proteins and Their Interactions	525
<i>Bálint Mészáros, Zsuzsanna Dosztányi, Csaba Magyar, István Simon</i>	
Theoretical and Computational Aspects of Protein Structural Alignment	557
<i>Paweł Daniluk, Bogdan Lesyng</i>	
Simulation of the Protein Folding Process	599
<i>Roterman Irena, L. Konieczny, M. Banach, D. Marchewka, B. Kalinowska, Z. Baster, M. Tomanek, M. Piwowar</i>	
¹³C Chemical Shifts in Proteins: A Rich Source of Encoded Structural Information	639
<i>Jorge A. Vila, Yelena A. Arnautova</i>	

Applications of Molecular Quantum Mechanics

When Water Plays an Active Role in Electronic Structure: Insights from First-Principles Molecular Dynamics Simulations of Biological Systems	685
<i>Giovanni La Penna</i>	

Electronic Properties of Iron Sites and Their Active Forms in Porphyrin-Type Architectures	711
<i>Mariusz Radoń, Ewa Broclawik</i>	

Bioinorganic Reaction Mechanisms – Quantum Chemistry Approach . . .	783
<i>Tomasz Borowski, Ewa Broclawik</i>	

Author Index	809
