Preface ix

Why this book? ix

Audience xi

Organization of the book xii

References and further sources of information xiii

1 Introduction 1

Overview 1

Some historical background 2

What is metadata? 6

What does metadata look like? 8

Why is metadata important? 10

The purposes of metadata 12

The five-point model 15

Summary 17

References and further sources of information 18

2 Describing and expressing metadata 20

Overview 20

Describing metadata 20

Databases of metadata 27

How to catalogue data 28

Expressing metadata 29

Summary 36

References and further sources of information 37

3 Standards and data models 38

Overview 38

Metadata models 38

About standards 50

Metadata standards 51

Summary 61

References and further sources of information 61

4 Purpose i: Resource description 64

Overview 64

Describing resources 64

Characteristics of metadata elements 65

Identifier 67

Title 73

Creator 74

Bibliographic citation 76

Date 76

Format 77

Description 77

Summary 78

References and further sources of information 79

5 Purpose ii: Information retrieval 80

Overview 80

Information retrieval concepts 80

Retrieval on the internet 84

Subject indexing and retrieval 88

Metadata and computational models of retrieval 95

Summary 98

References and further sources of information 99

6 Purpose iii: Management of information 101

Overview 101

Digital data lifecycles 101

Records management 102

Content management 106

Preservation 109

Library management 111

Summary 115

References and further sources of information 116

7 Purpose iv: Rights management, ownership and authenticity 118

Overview 118

Intellectual property rights 118

Rights management 120

Provenance 126

Comparing the models 130

Summary 131

References and further sources of information 132

8 Purpose v: Interoperability and e-commerce 134

Overview 134

The importance of interoperability 134

Metadata and interoperability 136

Management issues 140

E-commerce 142

Summary 145

References and further sources of information 145

9 Managing metadata 147

Overview 147

The project lifecycle 148

Analysing metadata requirements 149

Selecting and developing metadata schemas 150

Encoding and maintaining controlled vocabularies 152

Content rules 154

Interoperability 156

Quality management 162

Search aids and user education 165

Summary 167

References and further sources of information 167

10 Looking forward – the future 170

Overview 170

Another look at the five-point model 170

Trends in metadata management 175

Is metadata here to stay? 176

What changes? 177

Summary 178

References and further sources of information 178

Index 179

Index

- AACR 2
- AACR2 154
- author 74, 76
 - bibliographic citation 76
 - crosswalks 158–9
 - history 3
- ABC Ontology 39–41
- academic libraries 112–13, 115
- access rights 125
- A-Core 163–4
- acquisition of library resources 112
- administrative components 163
- administrative metadata 163–4
 - quality 162
- aggregation *see* records aggregation
- AGLS *see* Australian Government Locator Service 55–6
- AIP *see* OAIS Archival Information Package
- Alexandria Library 2
- Amazon 58–9
- analysis of requirements 149
- Anglo-American Cataloguing Rules *see* AACR
- application profiles 54, 151–2
- Archival Information Package *see* OAIS Archival Information Package
- archives 57
 - provenance 127–8
- artificial intelligence 98
- ARTISTE project 97
- Assets *see* ODRL Assets
- attributes *see* FRBR Attributes
- audiovisual materials, ISAN 71–2
- audit trail 130
- authentication of users 113, 164–5
- authenticity 127, 130
- authenticity of data 174
- author names 154–5
- authority lists 75–6
- authorization 164–5
- automatic indexing 98, 155–6, 166
- back-ups 164
- Barnes & Noble 58
- Bayesian inference 83–4
- BBC Domesday Book project 110
- bibliographic citation 76
- bibliographic databases 4
- book trade 33–6, 112
 - interoperability 140
 - rights management 122–3
- book provenance 130
- Boolean logic 81–2
- Callimachus of Cyrene 2
- cataloguing
 - author names 75
 - electronic catalogues 32
 - French code 2
 - history of 2
 - how to catalogue data 28
 - library catalogues 31–2, 112
 - union catalogues 32
- cataloguing rules 2
 - metadata 154
- CEDARS project 111
- Centre for Educational Technology Interoperability Standards *see* CETIS
- CETIS 138
- characteristics of metadata elements 65–7
- check digits 69, 71
- CIBR 97
- circulation control in libraries 112
- citation *see* bibliographic citation
- classification 90–1, 166
 - records management 105
- CMS *see* content management
- collection-level description 95
- collection-level retrieval 94–5
- computational models 95–6
- conservation 109
- Content Information *see* OAIS Content Information
- content integration 107–9
- content management 28, 36, 93, 106–9
- Content Packaging *see* IMS Content Packaging

- content rules 154
- content standards, interoperability 140
- content-based image retrieval 97
- context *see* OAIS Context
- contingency tables 83
- controlled vocabularies 152–4
- CORES project 161–2
- COUNTER (Counting Online Usage of Networked Electronic Resources) 115
- crawlers 87
