

Introduction to Quantitative Research Methods is a cleverly constructed, student-friendly introduction to quantitative research methods and basic statistics. Employing a detective metaphor throughout, this textbook demonstrates how quantitative methods are used to investigate and solve real-life problems, whilst still introducing the principles to the novice researcher.

The textbook comes with a CD-ROM, and links effectively to provide tutorial work on a range of basic statistics as well as techniques for seeking information from databases and other sources. The statistics modules can be used either as part of a detective game or directly in teaching and learning. Brief video lessons in SPSS and the use of real data-sets are also a feature of the CD-ROM.

Key features of the book are:

- Its theoretical focus, providing a concise overview of quantitative research issues.
- Its practical emphasis, providing case studies that exemplify the different ways research is conducted in the social sciences (ranging from psychology to sociology, politics to media studies).
- Its educational text features, providing practical vignettes and chapter highlights for revision.
- Its integrative and diverse approach to conducting quantitative research.
- It is international - providing case studies from a range of countries.
- Its innovative character, providing multi-media tutorials on generic research and statistical skills.
- The range of examples and illustrations drawn from historical and contemporary research in the social sciences.

Introduction to Quantitative Research Methods is a clear and accessible volume. It will be invaluable to introductory students taking courses in quantitative methods and statistics across the social sciences, especially those in media, psychology and sociology. Unlike other textbooks, this will take the pain out of getting to grips with statistics, making studying this traditionally complex area more enjoyable.

Mark Balnaves is Program Director of the Bachelor of Social Science at the Faculty of Behavioural and Social Sciences, University of Queensland.

Peter Caputi lectures in the Department of Psychology, University of Wollongong on measurement, statistics and research methods.

Alec McHoul is Professor of Communication Studies at Murdoch University in Perth, Western Australia.
