Foreword	xv
<i>Diane I. Hillmann</i>	
Preface	xvii
Acknowledgments	xxiii
1. Introduction to Metadata for Digital Collections	1
1.1. What Is Metadata?	1
1.2. What Is a Digital Collection?	6
1.3. What Does Metadata Do?	9
1.4. Types of Metadata	10
1.5. Metadata Standards	12
1.6. Creating a Digital Collection	14
1.7. Metadata for Digital Collections	17
1.7.1. Designing and Documenting a Metadata Scheme	18
1.7.2. Creating Metadata for Digital Objects	19
1.7.3. Metadata Sharing, Harvesting, and Aggregating	22
1.8. Summary	22
References	23
2. Introduction to Resource Description and Dublin Core	25
2.1. Resource Description Fundamentals	25
2.1.1. Resource Description	26
2.1.1.1. Resources	26
2.1.1.2. Metadata Descriptions and Records	28
2.1.1.3. Granularity of Description	31
2.1.1.4. Element Repeatability	33
2.1.1.5. Element Functionality	34
2.1.2. Local versus Standard, Shareable Element Sets	37
2.1.3. Describing Digital versus Original Resources	40
2.1.3.1. The One-to-One Principle	41
2.1.3.2. Content versus Carrier	42
2.1.3.3. Problems with the One-to-One Principle in Practice	43
2.1.3.4. Practical Options for Maintaining One-to-One	44

Metadata for Digital Collections

2.1.4. Descriptive versus Administrative Metadata	46
2.1.5. The Need for Research	46
2.2. Introduction to the Dublin Core Metadata Element Set	49
2.2.1. Simple (Unqualified) Dublin Core	50
2.2.2. Qualified Dublin Core	52
2.2.3. Creation and Use of Dublin Core Metadata	54
2.2.4. The Dublin Core Elements in Practice	56
2.3. Summary	57
References	58
3. Resource Identification and Responsibility Elements	59
3.1. Basic Resource Identification Elements	60
3.1.1. Titles	60
3.1.2. Dublin Core <i>Title</i>	63
3.1.3. Identifiers	66
3.1.4. Dublin Core <i>Identifier</i>	66
3.1.5. Dates	68
3.1.6. Dublin Core <i>Date</i>	70
3.1.7. Languages	74
3.1.8. Dublin Core <i>Language</i>	75
3.1.9. Resource Attributes Not Readily Accommodated in Dublin Core	76
3.2. Name, Responsibility, and Intellectual Property Elements	78
3.2.1. Names and Roles of Agents Responsible for Resources	78
3.2.2. Dublin Core <i>Creator</i> and <i>Contributor</i>	80
3.2.3. Publishers and Publication	83
3.2.4. Dublin Core <i>Publisher</i>	84
3.2.5. Rights, Ownership, and Restrictions on Access	85
3.2.6. Dublin Core <i>Rights</i>	86
3.3. Summary	86
References	87
4. Resource Content and Relationship Elements	89
4.1. Resource Content and Carrier Elements	89
4.1.1. Content Types and Genres	89
4.1.2. Dublin Core <i>Type</i>	91
4.1.3. Formats and Physical Description	94
4.1.4. Dublin Core <i>Format</i>	94
4.2. Subject Content Elements	98
4.2.1. Subjects	99
4.2.1.1. Subject Analysis, Representation, and Retrieval	99
4.2.1.2. Analyzing and Identifying Subject Content	100
4.2.1.3. Aboutness, Ofness, Isness, and Facets	101
4.2.1.4. Exhaustivity: Number of Subject Terms	103
4.2.1.5. Specificity: Specific versus General Subject Terms	104

4.2.1.6. Subject Analysis and Indexing of Images	105
4.2.2. Dublin Core <i>Subject</i>	109
4.2.3. Dublin Core <i>Coverage</i>	113
4.2.4. Descriptions, Abstracts, and Tables of Contents	115
4.2.5. Dublin Core <i>Description</i>	117
4.3. Resource Relationship Elements	118
4.3.1. Relationships among Different Resources	118
4.3.2. Dublin Core <i>Relation</i> and <i>Source</i>	119
4.4. Dublin Core Full Record Examples	124
4.5. Mapping Local Elements to Dublin Core	126
4.6. Summary	126
References	128
5. Controlled Vocabularies for Improved Resource Discovery	129
5.1. Improving Resource Discovery	129
5.2. Types of Controlled Vocabularies	132
5.2.1. Lists	134
5.2.2. Synonym Rings	136
5.2.3. Authority Files	136
5.2.4. Taxonomies and Classification Schemes	138
5.2.5. Thesauri	138
5.2.6. Subject Heading Lists	140
5.3. Using Established Vocabularies	140
5.4. Creating Your Own Vocabularies	144
5.5. Summary	146
References	147
6. XML-Encoded Metadata	149
6.1. XML Metadata Basics	149
6.1.1. Introduction to Metadata Encoding and XML	149
6.1.2. XML Syntax: Elements and Attributes	150
6.1.3. Well-Formed versus Valid XML	152
6.1.4. XML Namespaces and Metadata Modularity	153
6.1.5. Creating Metadata in XML	154
6.2. XML Metadata Record Examples	155
6.2.1. Dublin Core in XML	155
6.2.2. MODS XML	157
6.3. Anatomy of an XML Metadata Record	159
6.4. Summary	161
References	161
7. MODS: The Metadata Object Description Schema	163
7.1. Introduction and Overview	164
7.1.1. MODS Implementation Projects	164
7.1.2. MODS Documentation	165
7.1.3. MODS XML Structure	166

Metadata for Digital Collections

7.1.3.1. Container Elements and Subelements	166
7.1.3.2. Element Attributes	167
7.1.4. Flexibility in MODS Level of Detail and Granularity	168
7.2. MODS Elements: An Overview with Examples	168
7.2.1. <i>TitleInfo</i>	170
7.2.2. <i>Name</i>	172
7.2.3. <i>TypeOfResource</i>	175
7.2.4. <i>Genre</i>	176
7.2.5. <i>OriginInfo</i>	177
7.2.6. <i>Language</i>	181
7.2.7. <i>PhysicalDescription</i>	182
7.2.8. <i>Abstract</i>	183
7.2.9. <i>TableOfContents</i>	184
7.2.10. <i>TargetAudience</i>	184
7.2.11. <i>Note</i>	185
7.2.12. <i>Subject</i>	186
7.2.13. <i>Classification</i>	188
7.2.14. <i>RelatedItem</i>	189
7.2.15. <i>Identifier</i>	191
7.2.16. <i>Location</i>	192
7.2.17. <i>AccessCondition</i>	192
7.2.18. <i>Part</i>	193
7.2.19. <i>Extension</i>	194
7.2.20. <i>RecordInfo</i>	194
7.3. MODS Records	195
7.3.1. Complete MODS Record Example	195
7.3.2. Creating MODS XML Records	195
7.3.3. Displaying and Transforming MODS XML Records	201
7.3.4. Qualified Dublin Core and MODS Record Comparison	204
7.4. Mapping from Dublin Core to MODS	207
7.4.1. Automated Mapping from Simple Dublin Core to Simple MODS	208
7.4.2. Human Mapping from Qualified Dublin Core to Richer MODS	209
7.5. Summary	211
References	212
8. VRA Core: The Visual Resources Association Core Categories	213
8.1. Introduction and Overview	213
8.1.1. Metadata for Museum Objects	213
8.1.2. Metadata Standards for Museum Objects	214
8.2. VRA 3.0 Overview	216
8.3. VRA 3.0 Record Examples	218
8.4. VRA 4.0 Overview	219
8.5. VRA 4.0 Record Examples	221

8.6. Summary	225
Reference	225
9. Metadata Interoperability, Shareability, and Quality	227
9.1. Interoperability	227
9.2. Short- and Long-Term Metadata Viability	227
9.3. Metadata Sharing, Harvesting, and Aggregating	228
9.4. OAI Metadata Harvesting	229
9.5. Metadata Mapping and Crosswalks	231
9.6. Metadata Conversion and Processing	234
9.7. Example of Metadata Harvesting, Processing, and Aggregating	237
9.8. Good Quality and Shareable Metadata	241
9.9. Assessing Metadata Quality	242
9.10. Five Ways to Improve Your Metadata Quality and Interoperability	244
9.11. Summary	247
References	248
10. Designing and Documenting a Metadata Scheme	251
10.1. Metadata Scheme Design and Documentation	251
10.1.1. Introduction	251
10.1.2. Analyze Context, Content, and Users and Determine Functional Requirements	252
10.1.3. Select and Develop an Element Set	255
10.1.3.1. General/Cross-Collection Metadata Scheme Design	255
10.1.3.2. Collection-Specific Metadata Scheme Design	256
10.1.3.3. Factors in Choice of Metadata Element Set	257
10.1.4. Establish Element and Database Specifications	258
10.1.5. Establish Controlled Vocabularies and Encoding Schemes	259
10.1.6. Develop Content Guidelines	260
10.1.7. Document the Scheme	261
10.2. Metadata Design Examples	262
10.2.1. General Application Profile Examples	263
10.2.1.1. Collaborative Digitization Program Dublin Core Metadata Documentation	263
10.2.1.2. OhioLINK Dublin Core Metadata Documentation	272
10.2.1.3. Indiana Memory Dublin Core Metadata Documentation	272
10.2.1.4. DLF/Aquifer MODS Metadata Documentation	272
10.2.2. Collection-Specific Application Profile Examples	284

10.2.2.1. University of Washington's Architecture Collection Metadata Documentation	288
10.2.2.2. University of Washington's Musical Instruments Collection Metadata Documentation	288
10.2.2.3. University of Wisconsin–Milwaukee's Transportation Collection Metadata Documentation	288
10.2.3. CONTENTdm Examples	292
10.3. Summary	300
References	301
11. Metadata, Linked Data, and the Semantic Web	
11.1. What Are Linked Data and the Semantic Web and Why Care about Them?	303
11.2. Linked Open Data and the Resource Description Framework	305
11.2.1. Statements, Properties, Values, and RDF Triples	306
11.2.2. URIs: Uniform Resource Identifiers	307
11.2.3. Literals, Strings, and Things	310
11.2.4. The Power of Linking and Querying in the Linked Data Cloud	312
11.2.5. RDF/XML	314
11.3. Linked Data and Digital Collections	316
11.4. Dublin Core: From a Core Metadata Element Set for the Web to a Core Vocabulary for Linked Data	317
11.4.1. The DCMI Abstract Model (DCAM)	317
11.4.2. Dublin Core Application Profiles	319
11.5. Metadata Registries	319
11.6. What Does All of This Have to Do with Me?	321
11.7. Summary	322
References	323
Bibliography	325
Index	333
