Series Foreword	vii
Preface	ix
Acknowledgements	xi
1 Libraries, Technology, and People	1
2 The Internet and the World Wide Web	21
3 Libraries and Publishers	39
4 Innovation and Research	57
5 People, Organizations, and Change	77
6 Economic and Legal Issues	99
7 Access Management and Security	123
8 User Interfaces and Usability	143
9 Text	163
10 Information Retrieval and Descriptive Metadata	187
11 Distributed Information Discovery	207
12 Object Models, Identifiers, and Structural Metadata	225
13 Repositories and Archives	245
14 Digital Libraries and Electronic Publishing Today	263
Glossary	273
Index	285

Index

- Abstracting services, 43–45, 190–192
Access management, 124–136
ACM Digital Library, 51, 111
Aggregators, 93
Alexandria Digital Library, 227–228
American Memory, 168, 174
Anglo-American Cataloging Rules, 189
Applet, 149
Archives and archiving, 245–249,
 254–262
ARPAnet, 21–22
Art and Architecture Thesaurus, 191
ASCII, 168–169
Authentication, 124–126

Boolean searching, 200–202
Browsers, 147–159
Bush, Vannevar, 9

Caching, 73, 158–159
California Digital Library, 92–93
Cascading Style Sheets, 181–182
Catalog records, 189
Certification authority, 140
CGI, 30, 149
Citation analysis, 212–213
Coalition for Networked Information,
 60–61
Common Gateway Interface, 30, 149
Computational linguistics, 202–203
Copyright, 114–119, 128
CORBA standard, 252–253
CORE project, 47–48
Cryptographic containers, 135
CSS, 181–182

DARPA, 22, 59, 61
Data Encryption Standard, 139
Data hiding, 253
Dienst protocol, 218–220
Digital Libraries Initiative, 62–63
Digital Millennium Copyright Act, 115
Digital Object Identifier, 236
Digital Property Rights Language, 131
Digital signatures, 127–128, 140–141
Dissemination, 242–243
Distributed computing, 207–210
Distributed objects, 252
D-Lib Magazine, 52
DLITE user interface, 153
Domain names, 22, 235
DSSSL, 179
Document type definition (DTD),
 172–175
Dublin Core, 192–194, 220

Encoded Archival Description (EAD),
 173
Encryption, 137–141

Federated digital libraries, 214–218
Firewalls, 136–137

Google search system, 211

- Handle system, 236
- Harvard Law Library, 97
- Harvest architecture, 221
- Hash functions, 140–141
- HighWire Press, 50
- HTML, 31–32, 175–177
- HTTP, 34, 249, 251
- Identifiers, 231–237
- Indexing, automatic, 194–196, 211–214
- Indexing services, 43–45, 190–192
- Infobus, 255
- Information retrieval, 45, 197–205
- Informedia digital library, 161, 229
- Internet
 - academic uses of, 25
 - free speech and, 113
 - growth of, 11
 - international nature of, 113
 - payment and, 101–104
 - success of, 30
- Internet Engineering Task Force, 26–27
- Internet RFC series, 26–27
- Interoperability, 18, 208–210, 241, 249, 254
- Inter-university Consortium for Political and Social Research, 80
- Inverted files, 200–201
- Java programming language, 149–151
- Journals, electronic, 46–53, 106–110
- JSTOR project, 55–56, 174, 265
- Librarians, 84–88
- Libraries, conventional
 - costs of, 7, 10
 - innovation and, 57
- Library schools, 86–88
- Licklider, J. C. R., 9
- Los Alamos E-Print Archives, 28
- MARC format, 40–42, 189
- Markup languages, 46, 172–179
- Melvyl system, 93
- Mercury Electronic Library, 47–48, 88, 264
- MeSH headings, 190–192
- Metadata 66, 70–71, 127–128, 146, 188–197, 237–240
- Middleware, 155
- Migration, 259–260
- MIME data types, 34, 237–238
- Mirroring, 158
- Mosaic browser, 30
- Multimedia materials, 159–160, 227–229
- National Digital Library Program, 54
- National Science Foundation, 22
- NCSTRL, 218–220
- Netlib, 79
- Networked Computer Science Technical Reference Library, 218–220
- Object models, 64, 237–243
- OCLC, 8, 40–42
- Optical character recognition, 167–168
- Pad++, 153–154
- Page-description languages, 180–185
- Patents, on software, 121
- PDF format, 183–185
- Perseus project, 80
- PostScript language, 182–183
- Publishing, electronic 104–105
- Publishing industry, 7, 57, 105
- PURL, 235–257
- RealAudio format, 230
- Refreshing, 259–260
- Repositories, 245–249
- Resource Description Framework (RDF), 198–199
- Santa Fe workshop, 271
- Scanning, 167
- Searching, Boolean, 200–202
- Secondary information services, 93

- Serial Item and Contribution Identifier
 - standard, 232
- SGML, 163, 172–175
- SICI standard, 232
- Software, patents on, 121
- STARTS protocol, 222
- Storage, 256–260
- Style sheets, 178–182

- Task Force on Archiving Digital
 - Information, 256
- TCP/IP, 23–24
- TeX format, 166, 180–182
- Text conversion, 166–168
- Text Encoding Initiative, 173
- Textual materials, storage of, 163–166
- Tiger Summer School, 86
- Tipster project, 206
- Transliteration, 172
- TREC conferences, 206
- Tulip project, 47

- UML, 168
- Unicode, 169–172
- Union catalogs, 218
- Universities, and new technology, 94
- University libraries, 95
- URLs, 33–34, 233–235
- URNs, 235
- User authentication, 125–126
- User interfaces, 144, 151–155, 159–160
- UTF-8 encoding, 171–172

- Vocabulary, controlled, 190–192

- Warwick Framework, 250
- Watermarking, 127
- Web browsers, 147–159
- Web crawlers, 210–213
- Webmasters, 17, 90–91
- Web servers, 245–247
- Web sites, 35
- Web, World Wide, 29–38, 101–102, 210
- World Wide Web Consortium, 36, 234
- Xerox, 21, 131
- XML, 177–178
- XSL, 181–182

- Z39.50 protocol, 43, 216–218, 249
