

CONTENTS

1 Experiment in Surgical Disciplines	24
<i>(Liška, Brůha, Vyčítal)</i>	
1.1 The History of the Use of Experimental and Laboratory Animals	24
1.1.1 Ancient Cultures, Egypt and the Hebrew Civilisation	24
1.1.2 Ancient Greece	24
1.1.3 The Deterioration of Mediaeval Medicine	25
1.1.4 The Renaissance of Medicine, the Medicine of the Renaissance	25
1.1.5 The Birth of Experiment	25
1.1.6 The Establishment of Modern Scientific Approaches	28
1.2 The Importance of Experimental Work for Current Medical Practice	31
1.2.1 Experiments on Cell Cultures	32
1.2.2 Experiments on Animals	33
2 Management of Animal Experimentation	36
<i>(Pitule, Vyčítal, Brůha, Liška)</i>	
2.1 Ethical Aspects of Animal Experiments	36
2.1.1 Introduction	36
2.1.2 Historical Development	37
2.1.3 The Rule of the Three Rs	40
2.1.4 Conclusion	
2.2 Legal Standards Relating to the Protection of Experimental Animals	41
2.3 Introduction to Biology and Breeding of Experimental and Laboratory Animals	42
2.3.1. Basic Needs of Laboratory Animals	42
2.3.2 Systems of Breeding Experimental Animals	44
2.3.3 Genetic Characteristics of Experimental Animals	44

2.3.4 Characteristics of Well-known Experimentally Used Species	45
3 Anesthesia of Experimental Animals (<i>Beneš</i>)	50
3.1 Drug Administration, Anesthesia Care, Preoperative Preparation	50
3.1.2 Basic Anesthetic Methods and Techniques	50
3.1.2.1 <i>Types of anesthesia care and possibilities of their induction</i>	50
3.1.2.2 <i>Methods of drug administration</i>	51
3.1.3 Basic overview of agents for anesthesia in laboratory animals	53
3.1.3.1 <i>Anesthetics</i>	53
3.1.3.2 <i>Analgesics</i>	55
3.1.3.3 <i>Muscle relaxants</i>	56
3.1.4 Basic Preparation of Laboratory Animals for Anesthesia	57
3.2 Monitoring and Support of Vital Functions During Anesthesia of Laboratory Animals	59
3.2.1 Introduction	59
2.3.1. Basic Needs of Laboratory Animals	59
3.2.2 Basic Clinical Monitoring of Animal under Anesthesia	59
3.2.2.1 <i>Monitoring of ventilation and oxygenation</i>	59
3.2.2.2 <i>Monitoring of cardiovascular system</i>	61
3.2.3 Values of Basic Vital Functions in Different Animal Species	63
3.2.4 Ventilatory Support and Monitoring of Pulmonary Function	64
3.2.5 Extended Monitoring of Hemodynamics and Perfusion of Individual Organs	65
3.2.6 Laboratory Methods	68
3.2.7 Experimental Methods	69

3.2.7.1	Monitoring of tissue oxygen	69
3.2.7.2	Monitoring of microcirculation	69
3.3	Anesthesia, Analgesia, Postoperative Care	70
3.3.1	Introduction	70
3.3.2	Anesthesia of Small Laboratory Animals	70
3.3.2.1	General advantages and disadvantages of using small animals in laboratory experiments	70
3.3.2.2	Anesthetic procedures in small animals	71
3.3.3	Anesthesia of Large Laboratory Animals	73
3.3.3.1	Basic procedure and induction of anesthesia	74
3.3.3.2	Intensive care in animal experiments	76
3.3.4	Analgesia	77
3.3.4.1	Pain and its manifestation in experimental animals	77
3.3.4.2	Drugs used for pain relief	78
3.3.5	Postoperative Care	80
3.3.6	Euthanasia	81
3.3.6.1	Basic ethical principles	81
3.3.6.2	Applicable methods	82
4	Basic Rules of Surgical Work	86
(Brůha, Vyčítal, Pálek, Skála, Třeška, Skalický, Liška)		
4.1	Asepsis and Antisepsis	86
4.1.1	Surgical Hand Scrubbing	86
4.1.2	Preparation of the Surgical Field	90
4.1.3	Dressing into Surgical Gown and Gloves	93
4.1.4	Draping of the Surgical Field	96
4.2	Disinfection and Sterilization	96
4.2.1	Disinfection	96
4.2.2	Sterilization	99

4.2.2.1 <i>Physical sterilization</i>	101
4.2.2.2 <i>Chemical sterilization</i>	102
4.3 Basic Surgical Procedures	102
4.3.1 Preparation for Surgery and the Arrangement of the Operating Theatre	102
4.3.2 Hemostasis	103
4.3.3 Preparation	104
4.3.4 The Technique of Knotting	105
4.3.5 The Technique of Sewing an Anastomosis	106
4.3.6 Drainage	110
4.4 Surgical Approaches	111
4.4.1 Laparotomy	111
4.4.2 Thoracotomy	113
4.4.3 Sternotomy	116
4.5 Postoperative Care and Postsurgical Complications	117
4.5.1 Postoperative Care	117
4.5.2 Postoperative Complications	117
4.5.2.1 <i>CNS and metabolic complications</i>	117
4.5.2.2 <i>Circulatory complications</i>	118
4.5.2.3 <i>Respiratory complications</i>	118
4.5.2.4 <i>Complications on GIT</i>	118
4.5.2.5 <i>Urinary complications</i>	119
4.5.2.6 <i>Complications in the wound</i>	119
4.6 Surgical Instruments	119
5 Examples of Experimental Work	152
<i>(Vyčítal, Brůha, Křečková, Svobodová, Jiřík, Liška)</i>	
5.1 Experimental Model of the Use of Cytokines in the Regeneration of the Liver after the Embolisation of the Portal Vein	152

5.1.1 The Effect of Cytokines and Growth Factors on the Regeneration of the Liver	152
5.1.2 Embolisation of the Portal Vein Branch	153
5.1.3 The Methods of the Experimental Study of the Ligation of the Right Branch of the Portal Vein	156
5.1.4 The Results of the Study	160
5.1.5 Conclusions of the Study	160
5.1.6 Protocol for the Experimental Model of the Augmentation of the Liver Parenchyma by Interleukin-6 after the Embolisation of the Right Branch of the Portal Vein	163
5.2 Early Application of the Monoclonal Antibody Against the Transforming Growth Factor Beta-1 Before Extensive Resection Surgery of the Liver – Experiment on a Large Animal	164
5.2.1 Introduction	164
5.2.2 The phase Before the Resection	165
5.2.3 The Resection Phase and the Postsurgical Period	166
5.2.4 Termination of the Experiment	168
5.2.5 Statistical Analysis	168
5.2.6 Results	168
5.2.7 Conclusion	170
5.2.8 Protocol for the Experimental Model of the Regeneration of the Liver Parenchyma – Biological Therapy – the Inhibition of TGF β -1, Group X1	170
5.3 Experimental Model of Liver Regeneration in a Toxically Damaged Liver Parenchyma, Experiment on a Domestic Pig	173
5.3.1 The Metabolism of Amino Acids, Carbohydrates and Lipids in the Liver	173
5.3.2 Steatohepatitis	173
5.3.3 Alcoholic Steatohepatitis – ASH	173

5.3.4 Non-alcoholic Steatohepatitis – NASH	174
5.3.5 Chemotherapy-associated Steatohepatitis – CASH	174
5.3.6 Transforming Growth Factor Beta (TGF- β)	175
5.3.7 Solutions of the Experimental Study of Liver Regeneration in a Toxically Damaged Liver Parenchyma	175
5.3.8 Methodology of the Experimental Study of Liver Regeneration in a Toxically Damaged Liver Parenchyma	176
5.3.9 The Results of the Experimental Study of Liver Regeneration in a Toxically Damaged Liver Parenchyma	180
5.3.10 Conclusion of the Study	183
5.3.11 Protocol for the Experimental Study of Liver Regeneration in a Toxically Damaged Liver Parenchyma	183
5.4 Experimental Model of Biliary Obstruction – a Pilot Study	186
5.4.1 Introduction	186
5.4.2 Surgery	189
5.4.3 Postsurgical Period	190
5.4.4 Biochemistry	190
5.4.5 Ultrasonography	190
5.4.6 Termination of Experiment and Results	190
5.4.7 Protocol for the Experimental Model of Biliary Cirrhosis – Experiment on a Large Animal (Domestic Pig)	191
6 Cell Lines – <i>In Vitro</i> Model of Tumour Behaviour (Pešta)	196
6.1 Tissue and Cell Culture – History and Areas of Use	196
6.2 Types of Cell Cultures	200
6.3 The Growth Cycle of Cell Cultures	202

6.4 Environment Suitable for <i>In Vitro</i> Cell Culturing	205
6.4.1 Equipment of a Typical Cell Culture Laboratory	205
6.4.2 Cell Culture Media	210
6.5 Basic Procedures with Cells in Cell Culture	211
6.5.1 Cell Passaging	211
6.5.2 Freezing of Cell Cultures	212
6.6 Tumour Cell Lines	214
6.6.1 Culturing of Tumour Cell Lines	214
6.7 Study of Tumour Cell Lines and of the Mechanisms of the Effects of Medicines on Target Cells	215
6.7.1 Determination of gene Expression at the Level of RNA	215
6.7.2 Determination of Gene Expression at Protein Level	216
6.7.3 Tests Assessing Cell Proliferation and Viability	216
6.7.3.1 MTT test	216
6.7.3.2 Bromodeoxyuridine (BrdU) proliferation test and TUNEL assay	217
6.7.3.3 Analysis of cells in real time	217
6.7.4 Flow Cytometry	218
6.7.5 Gene Manipulations	219
6.7.6 Mammalian Expression Systems	220
7 Imaging Methods	222
<i>(Mírka, Tonar, Baxa, Ferda, Tupý)</i>	
7.1 New Trends in Radiological Diagnostic Imaging	222
7.1.1 Three Dimensional Imaging	222
7.1.1.1 3-D image reconstruction algorithms	225
7.1.1.2 Specifics of 3-D and 4-D ultrasonography	228
7.1.2 Computer aided diagnosis	228
7.1.2.1 CAD of small pulmonary nodules	230

7.1.2.2 CAD of colorectal polyps	236
7.1.2.3 CAD of breast cancer	237
7.1.2.4 CAD of pulmonary emboli	241
7.1.3 Functional Imaging – Perfusion	242
7.1.3.1 Introduction	242
7.1.3.2 Typical methods of nuclear medicine	244
7.1.3.3 Perfusion imaging using computed tomography	244
7.1.3.4 Perfusion magnetic resonance imaging	258
7.1.3.5 Perfusion examinations using ultrasound contrast imaging	260
7.1.4 Visualization of Metabolic and Cellular Activity	264
7.1.4.1 Hybrid PET/CT	266
7.1.4.2 Hybrid SPECT/CT	270
7.1.4.3 Evaluation of cellular functions using magnetic resonance imaging	272
7.1.4.4 Metabolism assessment by magnetic resonance spectroscopy	273
7.1.5 Contemporary Trends in Cardiac Imaging Using Computed Tomography	274
7.1.5.1 History	274
7.1.5.2 Technical aspects of data acquisition and reconstruction	275
7.1.5.3 Application of contrast agent	278
7.1.5.4 Static cardiac imaging	282
7.1.5.5 Dynamic and functional imaging	285
7.1.5.6 Perfusion (molecular) imaging	286
7.1.5.7 Perfusion CT	287
7.1.5.8 Dual-energy imaging	289
7.2 Imaging Radiological Methods in Experiment	292
7.2.1 X-ray Imaging Methods	293

7.2.2 Micro-CT	293
7.2.3 Ultrasonography	295
7.2.4 Magnetic Resonance	298
7.2.4.1 Magnetic resonance imaging (MRI)	298
7.2.4.2 Magnetic resonance spectroscopy (MRS)	299
7.2.4.3 Functional magnetic resonance imaging (fMRI)	299
7.2.4.4 Diffusion weighted imaging (DWI)	299
7.2.5 Use of Nuclear Medicine Techniques in Experiments	300
7.2.5.1 Introduction	301
7.2.5.2 Positron emission tomography (PET)	302
7.2.5.3 Single-photon emission computed tomography (SPECT)	302
7.2.5.4 Hybrid systems	302
7.3 Microscopic Techniques and Quantification of Tissue Structures	303
7.3.1 Basics of Microscopy	303
7.3.1.1 History of microscopy	303
7.3.1.2 Basic principles and terminology	304
7.3.1.3 Physical principles of microscopic methods	305
7.3.1.4 Optical microscope	308
7.3.1.5 Observation techniques in light microscopy	311
7.3.1.6 Transmission electron microscopy	313
7.3.1.7 Scanning electron microscopy	314
7.3.1.8 Laser microdissection	315
7.3.1.9 Image capture and digitization in microscopy	315
7.3.1.10 Types of objectives	316
7.3.1.11 Microscopic localization and dynamics of biological molecules	317

7.3.1.12 <i>Working principles in microscopic localization of molecules</i>	320
7.3.2 <i>Quantitative Microscopy and Stereology</i>	320
7.3.2.1 <i>Basic principles of stereology</i>	322
7.3.2.2 <i>Unbiased stereology</i>	322
7.3.2.3 <i>Variability of results and optimization of biological studies</i>	324
7.3.3 <i>Image Analysis and Stereology</i>	325
7.3.3.1 <i>Mathematical morphology</i>	326
7.3.3.2 <i>Advantages of image analysis and stereology</i>	327
7.3.4 <i>Stereology</i>	329
7.3.4.1 <i>Dimension of probes and structural features</i>	239
7.3.4.2 <i>Strategy to ensure randomness of stereological probes</i>	330
7.3.4.3 <i>Ratios and densities</i>	331
7.3.4.4 <i>Estimates of area and volume using point grids</i>	332
7.3.4.5 <i>Estimates of lengths using planes in 3-D and linear probes in 2-D</i>	332
7.3.4.6 <i>Estimates of surface area and surface density</i>	333
7.3.4.7 <i>Quantification of microvessels</i>	336
7.3.4.8 <i>Estimates of numerical density of particles by disector</i>	338
7.3.4.9 <i>Direct estimates of the number of objects using optical fractionator</i>	338
7.3.4.10 <i>Using linear density to analyse ruptures</i>	340
7.3.4.11 <i>Relative labelling index</i>	340
7.3.4.12 <i>Cluster analysis and colocalization of object</i>	341
7.3.4.13 <i>Analysis of structural anisotropy in 2-D</i>	342
7.3.4.14 <i>Petri-Metrics</i>	342

7.3.4.15 <i>Estimates of wall thickness of tubular structures</i>	345
7.3.5 Bias, Accuracy and Precision	346
7.3.5.1 <i>Sources of bias</i>	348
7.3.5.2 <i>Biological variance</i>	349
7.3.5.3 <i>Sampling error</i>	350
7.3.5.4 <i>Components of total observed variance in percentage</i>	351
7.3.5.5 <i>Importance of pilot studies</i>	354
7.3.5.6 <i>Stereological analysis of archival material and "representative sections"</i>	356
8 Introduction to Biomedical Statistics (Hošek)	368
8.1 What is Statistics?	368
8.1.1 Meaning	368
8.1.2 Statistics as a Discipline	368
8.1.3 Statistical Induction	368
8.1.4 Probability and Statistics	370
8.2 Data and their Types	370
8.2.1 What is Data?	370
8.2.2 Categories of Data	371
8.2.3 Recording and Storing Data	372
8.2.4 Problematic Phenomena in Data	374
8.3 Statistical Distribution	375
8.3.1 The Distribution of Probability, Statistics and Parameters	375
8.3.2 The Central Limit Theorem and Normal Distribution	376
8.3.3 The Properties of a Normal Distribution	377
8.3.4 Statistics and Parameters of Normal Distribution	378

8.3.5 The Choice of Statistics for the Analysis and Presentation of Data	380
8.4 The Presentation and Visualisation of Data	383
8.4.1 The Visualisation of the Frequency	384
8.4.1.1 <i>The frequency in one variable</i>	384
8.4.1.2 <i>The frequency in more variables</i>	384
8.4.2 Categorized Display of Continuous Variables	386
8.4.2.1 <i>Column charts</i>	386
8.4.2.2 <i>Box plots</i>	386
8.4.2.3 <i>The histogram</i>	386
8.4.2.4 <i>The bee swarm plot</i>	389
8.4.3 More Continuous Variables	390
8.4.4 The Display of Sequences and Time Series	391
8.5 Testing Hypotheses	391
8.5.1 Principles of Hypothesis Testing	391
8.5.2 Errors, Power and Reliability of the Tests	393
8.5.3 The Choice Between the One-tailed and the Two-tailed Test	395
8.5.4 The Multiple Testing Problem	396
8.5.5 The Choice of Test	397
8.5.5.1 <i>One variable (researching the distribution of a variable)</i>	399
8.5.5.2 <i>Two variables (researching the dependency of variables)</i>	440
8.5.5.3 <i>More variables</i>	405
8.6 Survival Analysis	406
8.6.1 The Nature of the Processed Data	406
8.6.2 Why do we Need Survival Analysis?	407
8.6.2.1 <i>Censored observations</i>	407
8.6.2.2 <i>We only live once</i>	408

8.6.3 The Most Common Methods of Survival Analysis	409
8.6.3.1 <i>The Kaplan-Meier method</i>	409
8.6.3.2 <i>Regression models</i>	411

9 Regeneration of Tissues and Organs 414 *(Králičková)*

9.1 Basic Terms in the Area of the Regeneration Processes of Tissues and Organs	414
9.2 The Relation Between Stem Cells and Regeneration Processes	414
9.2.1 Adult Stem Cells	415
9.2.1.1 <i>Basic characteristics of adult stem cells</i>	416
9.2.1.2 <i>Characterization of stem cells – current state and its shortcomings</i>	416
9.2.1.3 <i>Adult stem cells with the potential for the therapy of various illnesses</i>	416
9.2.1.4 <i>Everything we do not know and why it is not yet working to our liking</i>	417
9.2.2 Do Stem Cells Other than Adult Stem Cells Also Have Merit for the Regeneration of Tissue?	418
9.2.2.1 <i>Embryonic stem cells – definition, basic characteristics, merit</i>	418
9.2.2.2 <i>Foetal stem cells</i>	418
9.2.2.3 <i>Tumour stem cells</i>	418
9.2.2.4 <i>Stem cells on the border between classifications and their sources - amniotic fluid, placenta</i>	419
9.2.2.5 <i>Therapeutic cloning</i>	419
9.3 Everything we Have to Understand and be Able to Do with Stem Cells Before they Are Used for Therapy	420

9.3.1 Culturing of Stem Cells	420
9.3.1.1 <i>History – first steps, groundbreaking points</i>	420
9.3.1.2 <i>Current possibilities – what works and, contrarily, what we “cannot do”</i>	420
9.3.2 Differentiation of the Stem Cells	421
9.3.2.1 <i>Neural differentiation procedures</i>	421
9.3.2.2 <i>Chondrogenic differentiation procedures, creation of elements of bone tissue</i>	421
9.3.2.3 <i>Cardiomyocytes and endothelial cells – their importance in therapy?</i>	421
9.4 Modelling of Tissues and Organs	422
9.5 Is the Future in Tissue Therapy or a Return to Defined Methods?	422
9.5.1 The Arguments For and Against from a Biological Point of View	423
9.5.2 The Arguments For and Against from a Legislative Point of View	423
9.5.3 The Arguments For and Against from an Ethical Point of View	424
9.6 Conclusion	424
10 Biomechanics – Introduction and Selected Problems	428
<i>(Rosenberg, Křen, Rohan, Vimmr, Jansová, Jonášová, Lobovský, Lukeš, Štengl)</i>	
10.1 Introduction to Biomechanics	228
10.1.1 Aims and Benefits of Biomechanics	229
10.1.2 Modelling in Biomechanics	434
10.1.3 Material (Physical) Modelling	436
10.1.4 Computational Modelling	438

10.2 Biological Fluids and Interactions in Biomechanics	439
10.2.1 The General Role of Interaction in Human Biomechanics	440
10.2.2 Fluid Flow Modelling	443
10.2.2.1 Newtonian flow	446
10.2.3 Blood Flow Modelling in Coronary Bypasses	454
10.3 Interaction in the Lower Part of the Human Urinary Tract	466
10.3.1 Newtonian Fluid Flow	467
10.3.2 Elastic Continuum	467
10.3.3 Nonlinear Elastostatics	467
10.4 Interaction in the Total Knee Arthroplasty	478
10.4.1 Interaction in the Femoro-tibial Relation	480
10.4.2 The Flow of Synovial Fluid	480
10.4.3 Physical Model of the Knee Replacement	482
10.4.4 Interaction in the Arthroplasty of the Knee Joint	482
10.4.5 Interaction in the patello-femoral relation	485
10.5 Modelling of the Lower Part of the Urinary Tract Based on Cells Communication in the Bladder Wall	492
10.5.1 Introduction	492
10.5.2 Bladder – its Structure and Function During Filling	492
10.5.3 Models of the Smooth Muscle Cell Calcium Dynamics	493
10.5.4 Interstitial Cells of Cajal and ICCLC	493
10.5.5 Gap Junction	497
10.5.6 Computer Model – Examples	498
10.5.7 Conclusion	500
10.6 Phenomenological Model of Soft Tissues	500
10.6.1 Conception of the Composite Model	500
10.6.1.1 Viscoelastic model of passive fibres	503

10.6.1.2 <i>Fibres with no resistance in compression</i>	504
10.6.2 Spherical Hyperelastic Shell	506
10.6.3 Example: A Spherical Model of the Urinary Bladder	508
10.6.3.1 <i>Spherical isotropic balloon with fibres</i>	509
10.6.3.2 <i>Composite model of the detrusor</i>	512
10.6.4 Bi-phasic Model of Tissue – Biot Model	516
10.6.4.1 <i>Biot model of the porous medium</i>	516
10.6.4.2 <i>Constitutive relationships</i>	517
10.6.4.3 <i>The fluid content increase</i>	519
10.6.4.4 <i>Darcy law</i>	519
10.6.4.5 <i>The equilibrium conditions</i>	520
10.6.4.6 <i>Mechanical energy and dissipation</i>	521
10.7 A Multicompartment Model of Perfusion	524
10.7.1 Structure of Compartments in Parenchyma	524
10.7.2 Macroscopic Modelling of Darcy Flow in Parenchyma	525
10.7.3 Flow on Upper-level Vascular Trees	526
10.7.4 Coupling the “1-D” and the “Multicompartment Darcy Flow” Models	527
10.7.5 Convected Contrast Fluid in the Porous Materials	529
10.7.5.1 <i>Tracer redistribution in parenchyma</i>	529
10.7.5.2 <i>Transport on branching network</i>	530
10.7.6 Examples of the Perfusion Simulation	533
