

# CONFERENCE PROGRAM

---

## Day 1: June 13, 2016

---

### *Morning session*

*Shun-ichi Amari*

Information Geometry: Historical Episodes and Recent Developments 1

---

### *Afternoon session*

*Giovanni Pistone*

The Orlicz-Sobolev Exponential Manifold 2

*Roman Belavkin*

Kantorovich Optimal Transport Problem and Shannon's Optimal Channel Problem 3

*Felix Otto*

Riemannian Interpretation of the Wasserstein Geometry 4

---

## Day 2: June 14, 2016

---

### *Morning session*

*Imre Csiszár*

Information Geometry in Multiple Priors Models,  
Worst Case and Almost Worst Case Distributions 5

*Jürgen Jost*

Information Geometry and Game Theory 7

*Peter Harremoës*

Entropy on Convex Sets 8

---

***Afternoon session****Kenji Fukumizu*

Estimation with Infinite Dimensional Kernel Exponential Families 9

*Michel Broniatowski*

A Monte Carlo Approach to a Divergence Minimization Problem 10

*Shinto Eguchi*

Information Geometry Associated with Two Generalized Means 11

---

**Day 3: June 15, 2016**

---

***Morning session****Frank Hansen*

Quantum Entropy Derived from First Principles 12

*Davide Girolami*

Information Geometry of Quantum Resources 13

*Shunlong Luo*

Superadditivity of Fisher Information: Classical vs. Quantum 14

---

**Day 4: June 16, 2016**

---

***Morning session****Hiroshi Nagaoka*

Revisit to the Autoparallelity and the Canonical Divergence for Dually Flat Spaces 15

*Peter Michor*

Uniqueness of the Fisher-Rao Metric on the Space of Smooth Positive Densities 16

*Lorenz Schwachhöfer, Nihat Ay, Jürgen Jost, Hông Vân Lê*

Parametrized Measure Models and a Generalization of Chentsov's Theorem 17

***Afternoon session****Gerard Misiolek*

Nonlinear PDE in Information Geometry 18

*Nigel Newton*

Information Geometric Nonlinear Filtering: a Hilbert Approach 19

*Hông Vân Lê*

Embeddings of Statistical Manifolds 20

**Day 5: June 17, 2016*****Morning session****Flemming Topsøe*

Knowledge Modelling After Shannon 21

*Sumio Watanabe*

Higher Order Analysis of Bayesian Cross Validation in Regular Asymptotic Theory 22

*Shiro Ikeda*

Cosmological Parameter Estimation and Fisher Information Matrix 23

*Hiroshi Matsuzoe*

Geometry of Affine Immersions and Construction of Geometric Divergences 24

*Guido Montúfar*

Geometry of Boltzmann Machines 25

## Poster sessions

<i>Shotaro Akaho, Hideitsu Hino, Neneka Nara, Ken Takano, Noboru Murata</i> A Projection Algorithm Based on the Pythagorean Theorem and its Applications	26
<i>Attila Andai, Attila Lovas</i> On Robertson-Type Uncertainty Principles	28
<i>Nihat Ay, Shun-ichi Amari</i> A Novel Approach to Canonical Divergences within Information Geometry	30
<i>Joonwoo Bae, Dariusz Chruściński</i> Operational Characterization of Divisibility of Dynamical Maps	32
<i>Pradeep Kr. Banerjee</i> Information Decomposition Based on Common Information	34
<i>Teng Fei, Jun Zhang</i> Kähler and Para-Kähler Structures for Information Geometry	36
<i>Akio Fujiwara, Kaito Takahashi</i> Information Geometry Induced from Sandwiched Rényi $\alpha$ -divergence	38
<i>Paolo Gibilisco, Frank Hansen</i> An Inequality for Expectation of Means of Positive Random Variables	40
<i>K.V. Harsha, K S Subrahmanian Moosath</i> Estimation in a Deformed Exponential Family	42
<i>Zhiyue Huang</i> Selecting Moment Conditions in the Generalized Method of Moments for Mixture Models	44
<i>Osamu Komori, Shinto Eguchi</i> A Simple Mixture Model for Probability Density Estimation Based on a Quasi Divergence	45
<i>Aleš Kuběna</i> Symmetry Condition for Partially Factorizable Discrete Distributions	46
<i>Attila Lovas, Attila Andai</i> Volume of the Space of Qubit Channels and the Distribution of Some Scalar Quantities on it	48
<i>Luigi Malagò, Giovanni Pistone</i> Second-Order Information Geometry of Hessian Manifolds	50
<i>Hà Quang Minh</i> Log-Hilbert-Schmidt Distance Between Covariance Operators and its Approximation	52

<i>Mauro M. Monsalve-Mercado, Christian Leibold</i>	
Correlation Functions of Hippocampal Place Cells in Open Field Environments	54
<i>K S Subrahmanian Moosath, K.V. Harsha</i>	
Mismatched Estimation in an Exponential Family	55
<i>Jan Naudts</i>	
Quantum Measurement as a Conditional Expectation	56
<i>Atsumi Ohara</i>	
Doubly Autoparallel Structure on Statistical Manifolds and its Applications	58
<i>Diego P. Pires, Marco Cianciaruso, Lucas C. Céleri, Gerardo Adesso, Diogo. O. Soares-Pinto</i>	
Generalized Geometric Quantum Speed Limits	59
<i>Alexander Rylov</i>	
Constant Curvature Connections on Statistical Models	61
<i>Radka Sabolová, Paul Marriott, Germain Van Bever, Frank Critchley</i>	
Binary Information Geometry: Some Theory and Applications	62
<i>Fatma Muazzez Şimşir, Recep Özkan</i>	
On Curvature Computations of Multivariate Gaussian Distribution	63
<i>Takashi Takenouchi</i>	
Parameter Estimation with Deformed Bregman Divergence	65
<i>Tat Dat Tran, Jürgen Jost, Julian Hofrichter</i>	
Information Geometry in Population Genetics	67
<i>Nicholas Wisniewski</i>	
Simulating the Effect of Riemannian Curvature on Statistical Inference Using Brownian Motion	68
<b>List of Authors</b>	69
