1	Introduction	5
1.1	Motivation	5
1.2	Terminology and notation	5
1.2.1	General assumption and notation	5
1.2.2	Matrix properties	6
2	Space-efficient formats	6
2.1	Our assumptions	6
2.2	Our requirements	6
3	State-of-art	7
3.1	Common sparse storage formats	7
3.1.1	The Coordinate (COO) Format	8
3.1.2	The Compressed Sparse Row (CSR) format	8
3.1.3	Register blocking formats	8
3.2	State-of-the-art survey	9
4	Our new space-efficient formats	9
4.1	The entropy-based (EB) format	9
4.1.1	The main idea	9
4.1.2	Results and applicability	10
4.2	Minimal quadtree (MQT) format	10
4.2.1	The main idea	10
4.2.2	Results and applicability	11
4.3	The minimal binary tree (MBT) format	11
4.3.1	The main idea	11
4.3.2	Results and applicability	11
4.4	Minimal compressed formats	12
4.4.1	The main idea	12
4.4.2	Results and applicability	12
4.5	COOCOO256 and COOCSR256 formats	12
4.5.1	The main idea	12
4.6	Basic hierarchical (BH) formats	13
4.6.1	The main idea	13
4.6.2	Results and applicability	13
4.7	The advanced hierarchical (AH) format	13
4.7.1	The main idea	13
4.7.2	Results and applicability	13
4.8	Summary of space-efficient formats	14
5	Conclusions	14
