

CONTENTS

Author's Introduction	4
Background	6
1 INTRODUCTION	7
2 THEORETICAL AND EXPERIMENTAL ANALYSIS OF SHOULDER MILLING.....	7
2.1 Analysis of chip cross-section and tool loading	7
2.2 Geometrical model of the cutting tool	11
2.3 CALCULATIONS OF THE TOOL DEFORMATIONS.....	12
2.3.1 Analytical solution	12
2.3.2 Analysis with the FEA (Finite Element Method)	13
2.4 EXPERIMENTAL	13
2.5 RESULTS	13
2.5.1 FEA stress-strain analysis	13
2.5.2 Application of the results in the CNC machining – advanced tool deflection compensations	15
2.6 OTHER TECHNOLOGICAL MEASURES FOR A BATCH PRODUCTION - EFFECT OF COOLING AND PVD COATING, SOLID CARBIDE CUTTERS	16
3 THEORETICAL AND EXPERIMENTAL ANALYSIS OF DRILLING FOR TRANSOSSEOUS EXTERNAL FIXATION	17
3.1 K-WIRE tip design	17
3.2 Mechanical work and heat inserted when drilling	19
3.3 Mechanical loading of the K-WIRE, its performance	20
3.4 A new K-wire fixation	21
3.5 Other bio-mechanical <i>in vitro</i> tests for implant insertion	22
4 CONCLUSIONS	23
References	24
Czech Abstract (Shrnutí)	30
