|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Preface .....                                                                                                                                                     | 7   |
| <i>Y. V. Baryshev</i>                                                                                                                                             |     |
| Two fundamental cosmological laws of the Local Universe .....                                                                                                     | 9   |
| <i>Y. V. Dumin</i>                                                                                                                                                |     |
| Local Hubble expansion: Current state of the problem .....                                                                                                        | 23  |
| <i>A. Maeder</i>                                                                                                                                                  |     |
| Scale invariant cosmology: Cosmological models and small scale effects ...                                                                                        | 41  |
| <i>M. Křížek, L. Somer</i>                                                                                                                                        |     |
| Anthropic principle and the local Hubble expansion .....                                                                                                          | 65  |
| <i>M. Nowakowski</i>                                                                                                                                              |     |
| A local portrait of the cosmological constant .....                                                                                                               | 95  |
| <i>I. N. Taganov</i>                                                                                                                                              |     |
| Theoretical estimation of the Hubble constant .....                                                                                                               | 125 |
| <i>I. Goldman</i>                                                                                                                                                 |     |
| Do recent observations of giant molecular clouds suggest modification of gravity? .....                                                                           | 139 |
| <i>P. Kroupa</i>                                                                                                                                                  |     |
| The observed spatial distribution of matter on scales ranging from 100 kpc to 1 Gpc is inconsistent with the standard dark-matter-based cosmological models ..... | 145 |
| <i>M. Křížek, A. Mészáros</i>                                                                                                                                     |     |
| On the Friedmann equation for the three-dimensional hypersphere .....                                                                                             | 159 |
